CHAPTER VI.—FARM MORTGAGES AND FARM TAXES

Introduction.—This chapter presents two series of statistics which, while not directly related, are of increasing importance to owners of farms in general. The first gives information relative to farm mortgages for 1930 with comparative data, when available, for earlier censuses; and the second gives data, collected in 1930, for farm taxes paid or payable in 1929. However, it has not been feasible to secure information for mortgages and taxes for all farms. The census has made no effort to secure such data for farms operated by hired managers or tenants, for in many cases they would not know whether the farm was mortgaged and would be even less likely to know the amount of the mortgage indebtedness or the amount of the taxes. Therefore, the data must necessarily be limited to farms of owner-operators.

Most of the information given herein for mortgages and taxes is for farms of "full owners"; the information for farms operated by "part owners" is limited to that for the frequency of mortgage. The distinction between "full owners" and "part owners" is made on the basis of whether additional land is rented from others and does not refer in any way to mortgage encumbrance. Thus, in the census reports, farms owned wholly by their operators are termed "full-owner farms" or "farms operated by full owners" while those which consist of land rented in addition to that owned, are termed "part-owner farms" or "farms operated by part owners."

The general farm schedule in 1930, for the first time, ascertained from owner-operators whether they owned farm land in addition to that in the farm they were operating. It was believed that if the operators owned farm land which they rented to other parties, they would in some cases report the entire mortgage indebtedness or taxes on all their holdings, even though the form of inquiries indicated clearly that they were to report only for the portion in the farm which they were operating. This, it was thought, would be particularly true if the mortgage was a blanket mortgage covering the portion rented to others as well as that in the farm being operated by the owner, or if the bill or receipt for taxes was included in one statement.

The reports were first tabulated for farms operated by all full owners, including those who owned additional farm land elsewhere, as this gave a more complete report for the owner-operated farms, and, in the case of mortgages, gave figures more closely comparable with those secured in previous census years. A

separate tabulation of the data for mortgages and taxes was then made for farms whose owners did not own additional farm land elsewhere. Thus, to the extent which mortgages and taxes were reported for land not actually in the farms operated by full owners, this second tabulation, while for fewer farms than the first, gives a better comparison of mortgage indebtedness with the value of mortgaged farms, and of real-estate taxes with the acreage and value of the farms which reported taxes.

Information in regard to farm mortgages has been secured for farms of owner-operators in the census years 1910, 1920, 1925, and 1930, and also for the slightly smaller number of "farm homes occupied by their owners" in the census years 1890 and 1900. Since, however, nearly all farms which are operated by their owners are also occupied by them as homes, this slight difference in the basis of the statistics has virtually no effect on the comparability of the figures. In particular, the ratio which the number of farms mortgaged bears to the total number of owner-operated farms, with the possible exception of 1925 which will be discussed later, should be almost exactly comparable from census to census.

The mortgage status of such farms has been determined for all of these years, with the exception of the year 1925 when only the number of farms reporting the amount of mortgage indebtedness was ascertained. The mortgage status of farms operated by full owners and by part owners was secured separately for the first time in 1920, and is shown for that year as well as for 1930 in this report; while for 1925, the number of farms operated by full owners and by part owners was ascertained only for those reporting the amount of debt and are also included herein.

The amount of mortgage indebtedness and the value of the farms reporting the amount of debt have been secured for farms of full owners for all census years beginning with 1890, with the exception of 1900. However, the figures for 1890 include, in addition, the value and indebtedness of mortgaged partowner farms. The acreage of farms by mortgage status was first secured in 1930, though in 1925 the acreage was obtained for the farms reporting mortgage debt.

The mortgage statistics are presented by the color of the farm operator for the first time in 1930.

Another important classification, the age of full owners by mortgage status, is presented in this chapter. This distribution is given for the two years 1930 and 1920, but is also available for 1910, 1900, and 1890, in

the reports for those years. Additional information regarding all farm operators by age and tenure, or by age, color, and tenure, can be found in Chapter V, "Farm Operators by Age, Number of Years on Farm, and Days of Other Occupation."

The inquiries at the several censuses regarding the indebtedness of farm owner-operators, related to debt secured by real-estate mortgages, except in 1925 when one additional question was asked of all farm operators concerning the amount of their debts not secured by real-estate mortgages. Thus, with one exception, no attempt has been made to obtain information concerning indebtedness secured by chattel mortgages, crop mortgages, other collateral, or personal security. From the standpoint of the purpose for which incurred, a hard and fast line can not always be drawn between farm mortgage and personal and collateral farm credit; for example, a part of both classes may have originated for making farm improvements, or it may be that credit in the form of a short-term loan has been shifted to the form of a farm mortgage.

In 1930, the questions regarding the mortgage status, mortgage indebtedness, and charges for owner-operators were as follows:

If you own all or part of this farm, was there any mortgage debt on the land and buildings so owned on April 1, 1930?

Amount of mertgage debt on land and buildings in this farm owned by you, April 1, 1930.

Amount charged you on this mortgage debt for interest, commissions, bonuses, and premiums in 1929.

The mortgage status of farms operated by both full owners and part owners was determined by their answer to the first question. Since a separate value was not secured for the "owned" land in farms operated by part owners as distinct from that "rented," the data in this chapter for acreage and value of farms, by mortgage status, and for indebtedness and charges, are confined to the farms operated by full owners. The mortgage status refers to the farm as a whole, as not all the land and buildings of a mortgaged farm need be under the mortgage.

Three groups of data are presented for mortgaged farms of full owners:

(1) For those who reported both the amount of their indebtedness and charges; (2) for those who reported the amount of debt only; and (3) for those who did not report either the amount of their debt or charges (unknown).

In comparing the mortgage indebtedness and charges, it should be remembered that the indebtedness relates to April 1, 1930, and the charges to the calendar year 1929. Thus, if new mortgages, which were not the result of funding operations, came into existence in 1930 before the census date, correct reports would require an answer to the first two questions with the third unanswered. Or, if the mortgage had been partly reduced or increased in 1930 before the census date, the comparison of indebtedness with charges would be affected accordingly.

In the census of 1925, the mortgage questions were not limited to debt on land in the farm actually being operated by the owner. The questions asked of all farm operators, covered the amount of mortgage debt on all farm land and buildings owned anywhere in the United States and the value of farm land and buildings covered by mortgages. Though the questions were asked of all farm operators, the reports for owner-operators were tabulated separately. The form of the questions made it possible for an operator to report mortgage indebtedness on land which was not a part of the farm he was operating; when occurring, such reports would have been included with those reporting mortgage indebtedness for the farms they were operating. Also in that year, only those farms which actually reported the amount of indebtedness could be listed as mortgaged. All of the 1925 data, therefore, relate only to the farms of owner operators who reported the amount of indebtedness of any of their farm land.

The questions asked in 1920 relative to farm mortgages were practically as stated above for 1930 except that the third question called for the rate of interest instead of the amount charged for interest, commissions, bonuses, and premiums. The total interest charges, as shown for 1920, were obtained by arranging the amount of indebtedness on January 1, according to groups with specified rates of interest, and then multiplying the amount of mortgage in each rate group by its respective rate and summing up the group interest charges to secure the average interest rate.

In 1910, two questions regarding farm mortgages were asked, one relating to the mortgage status of the owned land, and the other to the amount of mortgage indebtedness. No reference was made to the annual charges or interest rate.

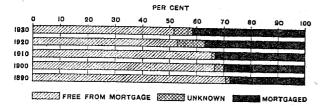

At the censuses of 1890 and 1900 the inquiries relating to farm mortgage indebtedness were on schedules separate from the agricultural schedules. No express reference was made on these schedules to the farms consisting partly of land owned by the operator and partly of rented land, but the form of the inquiry was such that the replies indicating the presence or absence of debt in practically all cases must have related only to the land owned by the operator. At the census of 1900, no inquiry was made with regard to the amount of the mortgage debt or the value of the mortgaged property. This information was secured in 1890, however, and it would appear that at that census, part owners in practically all cases reported the value of the land and buildings which they owned (not including the rented land), and the mortgage indebtedness on the same. The 1890 figures for the amount of the mortgage debt, therefore, include the debt on the owned part of these farms, as well as that on farms fully owned by their operators.

Mortgage status of farms operated by all owners.— By reference to Tables 1 and 2 it may be noted that

most of the farms operated by their owners were reported definitely in one of the two classes, "free from mortgage" or "mortgaged," while for a smaller number the mortgage status was not reported by the enumerator. There were many cases where the enumerator apparently intended, by leaving the questions unanswered, to indicate that there was no mortgage debt. An investigation of farms of the class tabulated as "unknown" in 1920 in a number of typical counties indicated the greater part were free from mortgage.

The number of farms operated by their owners in 1930 was 3,568,394. Of this number, 1,845,997, or 51.7 per cent, were definitely reported as free from mortgage indebtedness; 1,497,766, or 42 per cent, were definitely reported as mortgaged. The proportion re-

PER CENT DISTRIBUTION OF OWNER-OPERATED FARMS, ACCORD-ING TO MORTGAGE STATUS, FOR THE UNITED STATES: 1890 TO

ported mortgaged was higher in 1930 than for any previous census year. This percentage rose continuously from 27.8 in 1890 to 37.2 in 1920, declined to 36.1 in 1925, and then increased to 42 in 1930.

In the decade 1920 to 1930, the greatest relative increase in percentage of owner-operated farms under mortgage occurred in the three divisions of the South, followed by New England, Pacific, East North Central, West North Central, and Middle Atlantic Divisions in the order given, while the Mountain Division showed a slight decrease. However, in 1930, the West North Central still led all divisions with 54.7 per cent of its owner-operated farms reported mortgaged against a low of 27 per cent in the South Atlantic Division. Among the States, North Dakota with 67 and South Dakota with 59.8 led in percentage of owner-operated farms mortgaged, while West Virginia with 17.4 and Virginia with 22.8 had the lowest percentages.

The proportion of all owner-operated farms free from mortgage, mortgaged, or for which mortgage reports were not secured, are shown graphically for the United States in one of the accompanying diagrams for the decennial years 1890 to 1930; while in another, similar data are presented by States for 1930 and 1920.

l Figures relate to "owned" farms—that is, to farms operated by their owners. Owners who hired some additional land (part owners) are included. No mortgage data were secured for farms operated by managers or tenants.

In the reports of the 1890 census, all owned farm homes without mortgage report were distributed between the two groups, "mortgaged" and "free from mortgage." For purposes of comparison the number of these farm homes which was assigned to each group has been recomputed and subtracted, leaving the figures for 1890 approximately as reported.

I A minus sign (—) denotes decrease.

Mortgage status of farms operated by full owners and part owners.—The subdivision of farm owner-operators into full owners (those operating their own land only) and part owners (those renting some additional land from others) has already been noted. The distribution of the farms operated by these two classes of owners, according to mortgage status, is shown for the United States in Table 1 and for divisions and States in Tables 10 and 11. A considerably higher proportion of the farms operated by part owners in 1930 was reported mortgaged than by full owners, the percentages for the United States being 51.8 and 39.8, respectively. The similar percentage for part owners was 43.7 in 1920, which had increased to 48.1 in 1925, and 51.8 in 1930. For full owners the percentage mortgaged was 36.2 in 1920, which decreased to 34 in 1925, and increased to 39.8 in 1930.

In the year 1930, a higher proportion of the partowner farms was mortgaged than of the farms operated by full owners in all States, with the exception of Vermont. The mortgage status of both of these classes of owners for 1930 and 1920 is presented graphically in two of the diagrams which follow.

Of farms operated by white full owners, 40.4 per cent were reported mortgaged in 1930 against 28 per cent of farms operated by colored full owners. For the 16 Southern States, where most of the colored farm operators were located, the proportion of mortgaged farms of full owners was higher for white operators in 11 States; and for colored, higher in only 5 States—Delaware, North Carolina, Tennessee, Mississippi, and Arkansas.

Mortgage status of full owners by color and age.— The number of full owners, according to their mortgage status and age for 1930 and 1920 and according to their mortgage status, color, and age for 1930 is presented for the United States in Table 3, and by divisions and States in Tables 13, 15, and 17. Table 3 also gives a percentage distribution of full owners in each age group, by mortgage status, and another percentage distribution of the number of full owners of each mortgage status, by age. A percentage distribution, similar to the first one mentioned, is presented for divisions and States in Tables 14, 16, and 18.

Relatively fewer farms of full owners in the older age groups were mortgaged than in the younger age groups. In 1930, the age group "35 to 44 years" showed 50.9 per cent of its full-owner farms under mortgage, this percentage being higher than for any other age group. The immediately preceding group "25 to 34 years" had the next highest percentage mortgaged with 50.7, which was followed in order by the groups "45 to 54 years," "Under 25 years," "55 to 64 years" and "65 years and over." Since most of the full owners are white, the percentages for white operators follow very closely those for all full owners; while for colored, the highest proportion under mortgage occurred in the group "45 to 54 years" having increased regularly through the three preceding age groups and decreasing through the last age groups. Full owners 45 years of age and over represented 75.2 per cent of all those reporting farms free from mortgage, and 61.3 per cent of all those reporting mortgage indebtedness. The corresponding percentages for white were, respectively, 75.3 and 60.9, and for colored

were 72.3 and 71.8.

Full owners of mortgaged farms were of greatest relative importance in the age group "25 to 34 years" in 17 States in the North, 7 in the South, and 4 in the West; in the age group "35 to 44 years" in 4 States in the North, 9 in the South, and 6 in the West; and in the group "45 to 54 years" in New Mexico only.

¹ Includes full owners whose mortgage status was not reported.

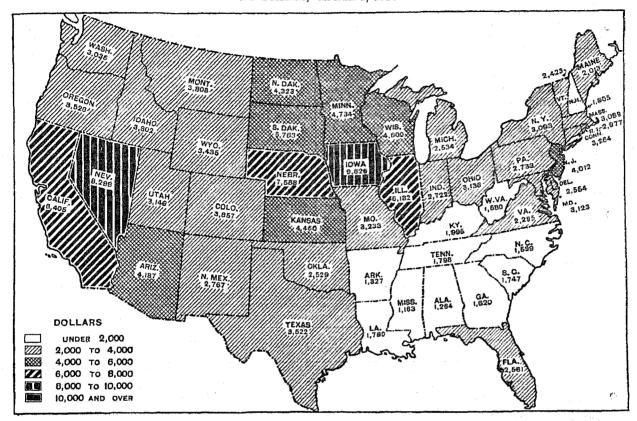

AVERAGE VALUE OF LAND AND BUILDINGS PER MORTGAGED FARM FOR FARMS OPERATED BY FULL OWNERS ONLY, BY STATES, APRIL 1, 1930

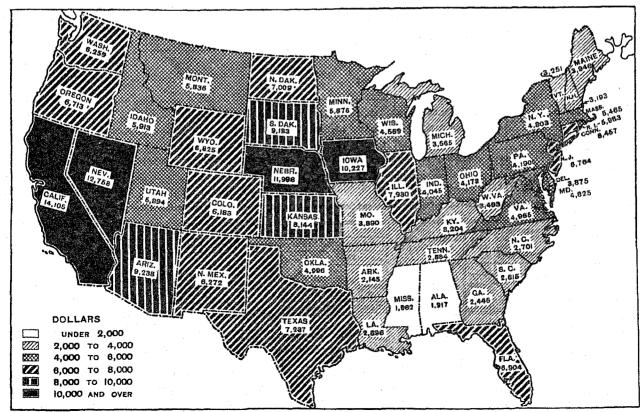

RATIO OF MORTGAGE DEBT TO VALUE OF MORTGAGED FARMS FOR FARMS OPERATED BY FULL OWNERS ONLY, BY STATES, APRIL 1, 1930

AVERAGE AMOUNT OF DEBT PER MORTGAGED FARM FOR FARMS OPERATED BY FULL OWNERS ONLY, BY STATES, APRIL 1, 1930

AVERAGE AMOUNT OF EQUITY PER MORTGAGED FARM FOR FARMS OPERATED BY FULL OWNERS ONLY, BY STATES, APRIL 1, 1930

Acreage and value of farms of all full owners by mortgage status.—Table 4 presents, for the United States, current figures for the number of farms operated by full owners, by mortgage status and color of operator, with the acreage and value of the farms in each group; Table 5 presents some derived figures for the average acreage and average value per farm; and Table 6 presents historical figures. Similar data for farms of full owners who did not own additional farm land, for 1930 only, are presented in Table 7. Information, corresponding to that contained in these tables, is given by divisions and States in Tables 10, and 19 to 25 inclusive.

Of all farms operated by full owners, not only were 39.8 per cent reported mortgaged but these same encumbered farms had 45.8 per cent of the acreage and 49.2 per cent of the value. Therefore, the average acreage and the average value of the mortgaged farms exceeded that for the remainder, which were either reported as free from mortgage or failed to give a report

on their mortgage status. The average size of mortgaged farms exceeded that of those free from mortgage in all but six States, namely, Massachusetts, Rhode Island, Connecticut, Ohio, Arizona, and California. The average value of mortgaged farms also exceeded that of those free from mortgage in all States, except Massachusetts and Connecticut.

Slightly more than four out of every five full owners (82.4 per cent) did not own additional farm land; for the subgroups, 80.8 per cent of those reporting their farms free from mortgage did not own additional farm land as compared with 84.5 per cent of those reporting

their farms under mortgage.

Of those who did not own additional land, 40.8 per cent reported their farms mortgaged. The number of those who owned additional farm land can be obtained by subtraction, and of these only 34.9 per cent reported mortgages. The average acreage and the average value per farm for the former group was smaller than for the latter group.

TABLE 4.—MORTGAGE STATUS OF FARMS OPERATED BY FULL OWNERS—NUMBER OF FARMS, ACREAGE, AND VALUE; MORTGAGE INDEBTEDNESS AND CHARGES; BY COLOR OF OPERATOR (1930); CENSUSES OF 1930 AND 1920; FOR THE UNITED STATES

[Statistics for 1930 relate to Apr. 1, and for 1920 to Jan. 1. Figures for divisions and States in Tables 10, 19, 20, and 22 to 24. "White" includes Mexicans and Hindus.

"Colored" includes Negroes, Indians, Chinese, Japanese, and all other nonwhite races]

^{7, 437} 5, 775 ¹ The figures for full owners owning no other farm land, whose mortgage status was not reported were derived by applying to the figures for all full owners whose mortgage status was not reported, as a hown in Table 4, the percentages which the totals for full owners free and mortgaged owning no other farm land formed of all full owners free and mortgaged. These computations were made first for the color groups and then added to obtain totals.

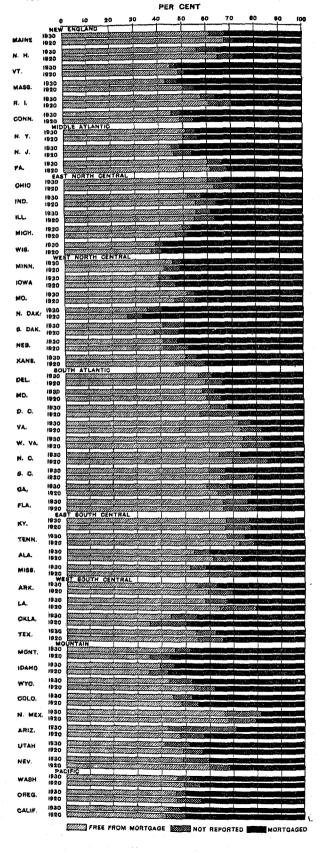

¹ Interest, commissions, bonuses, and premiums charges.

¹ Figures include only farms consisting wholly of land owned by the operator and reporting amount of mortgage debt.
2 The figures for 1890 include estimates, since at that causus the farm homes for which no mortgage report was secured were distributed between the two groups, "mortgaged" and "free from mortgage," and in addition the mortgage debt was estimated, both for the mortgaged homes thus added to the number actually reported and for other mortgaged farm homes shifting to report the amount of debt. The inclusion of these estimates explains why the number of farm homes shown int his table is greater than the number of farm homes "reported mortgaged," which appears in Tables 2 and 9.
3 A minus sign (—) denotes decrease.

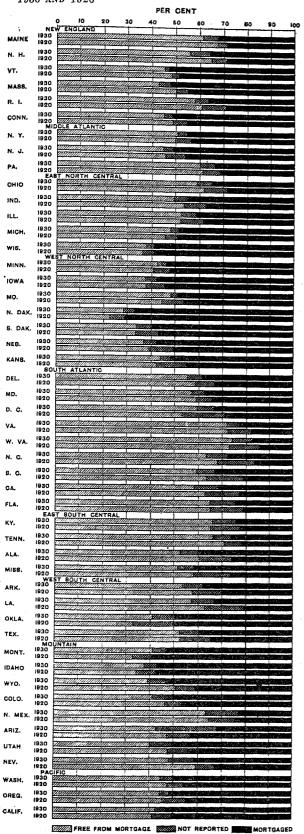

Mortgage indebtedness on farms of full owners.—It must be borne in mind that the amount of indebtedness shown in the accompanying tables is confined to that on farms of full owner-operators who not only reported the fact that their farms were mortgaged, but also gave the amount of their mortgage indebtedness. The figures are presented, as reported, for 1930 and 1920 for the United States in Tables 4 and 5 along with those for the number of farms, their acreage and value, by mortgage status. Historical figures are presented in Table 6; in the reports for the census of 1890 not only were the farms without mortgage report distributed and a part of them assumed to be mortgaged. but estimates were made for the amount of debt on those farms and also on farms for which the fact but not the amount of indebtedness was reported. The number of farms for which estimates were made, however, was relatively small, and the estimates should have but little effect on the comparability of the figures. The indebtedness for those in 1930 who did not own additional farm land is presented in Table 7. Corresponding data for all of the above tables are shown, by divisions and States, in Tables 22 to 25, inclusive.

In 1930, of those full owners reporting that their farms were mortgaged, only 1.04 per cent failed to give the amount of indebtedness. The amount of indebtedness reported on 1,145,737 full-owner farms was \$4,080,176,438, which represented 39.6 per cent of the value of these same mortgaged farms. In 1920, the ratio of debt to value was only 29.1 per cent when 1.193.047 farms reported a debt of \$4,003,767,192. The average value of mortgaged farms reporting the amount of indebtedness was \$8,997 in 1930 as compared with \$11,546 in 1920, and since the average amount of indebtedness was \$3,561 in 1930 and \$3,356 in 1920, the owner's equity had declined to \$5.436 in 1930 from \$8,190 in 1920. Thus the owner's equity in mortgaged farms was somewhat less than the \$6,129 average value of farms of those free from mortgage. However, both of these are in excess of similar figures for the owner-operators who did not own additional farm land.

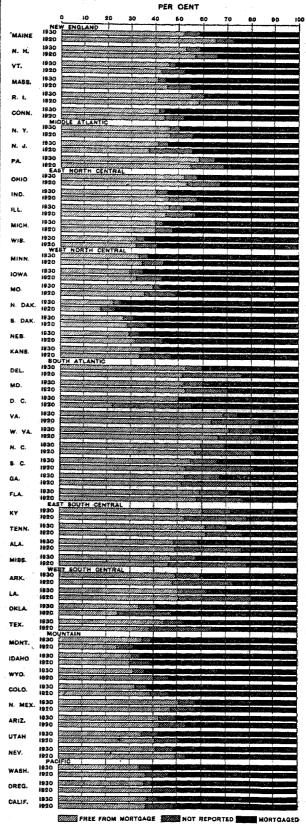

The amount of mortgage indebtedness on fullowner farms reporting is shown in one of the accompanying dot maps and, for comparative purposes, the value of farms of all full owners is presented in a similar map. A series of three maps are presented showing, respectively, the average value, the average amount of mortgage indebtedness, and the average amount of owner's equity for mortgaged farms as of April 1, 1930. Another map is presented to show the ratio of indebtedness to value for mortgaged farms. PER CENT DISTRIBUTION OF OWNER-OPERATED FARMS, ACCORDING TO MORTGAGE STATUS, BY STATES: 1930 AND 1920

PER CENT DISTRIBUTION OF FARMS OPERATED BY PART OWNERS, ACCORDING TO MORTGAGE STATUS, BY STATES: 1930 AND 1920

Annual charges or interest rate.—The ratio of annual charges to debt, as presented for 1929, is not exactly comparable with the average rate of interest as reported for 1920 and 1890. However, a comparison of those figures is of value, since the interest rate prevailing in 1929 could not have exceeded the ratio of charges to debt as reported for that year.

The ratio of charges to debt, as given in Table 6 for the United States, was 6.12 per cent for the year 1929 as compared with an average rate of interest of 6.1 per cent for 1920 and 7.1 per cent in 1890. It appears, therefore, that the interest rate prevailing in 1929 was somewhat less than that reported for 1920. The spreasd in the interest rate, reported among the States, has declined continuously as the figures pre-

sented in Table 24 indicate. For 1929, the highest ratio of charges to debt was 7.55 per cent in Arizona and the lowest 5.49 per cent in Wisconsin; in 1920, the highest rate of interest, 7.8 per cent, was reported in Arkansas and the lowest, 5.1 per cent, in New Hampshire; and in 1890 the highest rate was 12.6 per cent as reported in Arizona and the lowest was 5.4 per cent as reported in Pennsylvania. However, while the spread in the rate of interest appears to have narrowed, it is still material. The ratio of charges to debt for white operators in 1929 was 6.11 per cent and for colored operators was 7.20 per cent.

The ratio of charges to debt, for 1929, is presented graphically in the accompanying map which shows considerable variation within State boundaries.

RATIO OF ANNUAL CHARGES TO FARM MORTGAGE INDEBTEDNESS FOR FARMS OPERATED BY FULL OWNERS ONLY, BY COUNTIES, CENSUS OF 1930

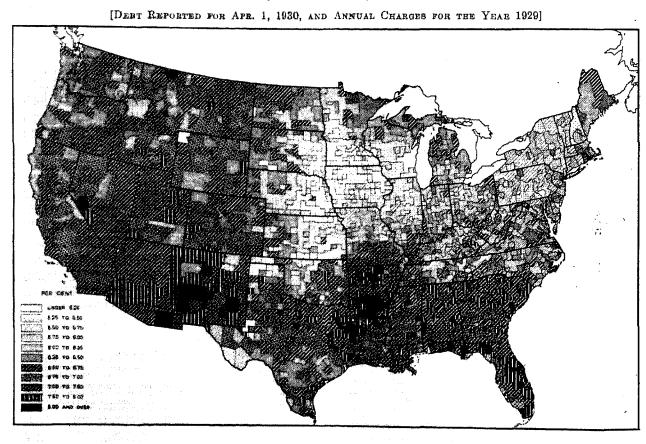

TABLE 8.—MORTGAGE STATUS OF FARMS OPERATED BY OWNERS, WITH PER CENT DISTRIBUTION, BY
DIVISIONS AND STATES: 1930, 1925, AND 1920
[Statistics for 1930 relate to Apr. 1, and for 1925 and 1920 to Jan. 1. Corresponding data for full owners in Table 10, and for part owners in Table 11. Figures relate to farms operated by managers or tenants]

¹ Number reporting amount of mortgage debt on farm land and buildings anywhere in the United States. See text discussion.

TABLE 9.—MORTGAGE STATUS OF FARMS OPERATED BY OWNERS, BY DIVISIONS AND STATES: 1890 TO 1930

[Statistics for 1930 relate to Apr. 1; for 1925 and 1920 to Jan. 1; for 1910 to Apr. 15; and for earlier years to June I. Figures relate to "owned" farms—that is, to farms operated by their owners. Owners who hired some additional land (part owners) are included. No mortgage data were secured for farms operated by managers or

1 Farm homes occupied by their owners.

Farm homes occupied by their owners. In the reports of the 1890 census, all owned farm homes without mortgage report were distributed between the two groups, "mortgaged" and "free from mortgage." For purposes of comparison, the number of these farm homes which was assigned to each group has been recomputed and subtracted, leaving the figures for 1890 approximately as reported.

Number reporting amount of mortgage debt on farm land and buildings anywhere in the United States. See text discussion
Figures for 1900 include Indian Territory; those for 1890 are for Oklahoma Territory alone, no data being available for Indian Territory.

Table 9.—MORTGAGE STATUS OF FARMS OPERATED BY OWNERS, BY DIVISIONS AND STATES: 1890 TO 1930—Continued

[Statistics for 1930 relate to Apr. 1; for 1925 and 1920 to Jan. 1; for 1910 to Apr. 15; and for earlier years to June 1. A minus sign (—) denotes decrease. Per cent not shown when base is less than 100. Figures relate to "owned" farms—that is, to farms operated by their owners. Owners who hired some additional land (part owners) are included. No mortgage data were secured for farms operated by managers or tenants]

included. 140 mores				s operate	o by ma	nagers o	r tenants								(1	ore, are

1 Form homes county					-			-				-				

¹ Farm homes occupied by their owners.

² Farm homes occupied by their owners. In the reports of the 1890 census, all owned farm homes without mortgage report were distributed between the two groups, "mortgaged" and "free from mortgage." For purposes of comparison, the number of these farm homes which was assigned to each group has been recomputed and subtracted, leaving the figures for 1890 approximately as reported.

Figures for 1900 include Indian Territory; those for 1890 are for Oklahoma Territory alone, no data being available for Indian Territory.

TABLE 10.—MORTGAGE STATUS OF FARMS OPERATED BY FULL OWNERS, 1930, 1925, AND 1920; AND BY COLOR OF OPERATOR, 1930; WITH PER CENT DISTRIBUTION; BY DIVISIONS AND STATES

[Statistics for 1930 relate to Apr. 1, and for 1925 and 1920 to Jan. 1. Data for all owners in Table 8, and for part owners in Table 11. "White" includes Mexicans and Hindus. "Colored" includes Negroes, Indians, Chinese, Japanese, and all other nonwhite races]

¹ Number reporting amount of mortgage debt on farm land and buildings anywhere in the United States. See text discussion.

TABLE 12.—PER CENT DISTRIBUTION BY MORTGAGE STATUS OF FARMS OPERATED BY OWNERS, BY DIVISIONS AND STATES: 1890 TO 1930

[Statistics for 1930 relate to Apr. 1; for 1925 and 1920 to Jan. 1; for 1910 to Apr. 15; and for earlier years to June 1. All percentages based on figures in Table 9; see notes on that table. Total number of farms operated by their owners equals 100 per cent]

C. SPLEEDERF PT 15k	. 46,60	a 41, 33	51 21,43	0† 13, 73	2H 955, 884, 71	764, 166, 01	1 250, 199, 19	0 154, 256, 86	6 298, 523, 2	30 224, 063, 90	3 60, 036, 666	46, 767, 8

The figures for 1890 include estimates, since at that census the farm bames for which ne mortgage report was secured were distributed between the two groups, "mortgaged" and "free from mortgage," and in addition the mortgage debt was estimated, both for the mortgaged homes thus added to the number actually reported and for other mortgaged farm homes falling to report the amount of debt. The inclusion of these estimates explains why the number of farm homes shown in this table is greater than the number of larm homes "reported mortgaged," which appears in Tables 2 and 9.

Table 24.—MORTGAGED FARMS OPERATED BY FULL OWNERS REPORTING AMOUNT OF DEBT—NUMBER OF FARMS, VALUE OF LAND AND BUILDINGS, AND MORTGAGE INDEBTEDNESS, WITH AVERAGES AND PERCENTAGES, BY DIVISIONS AND STATES: 1890, AND 1910 TO 1930—Continued

[Statistics for 1930 relate to Apr. 1; for 1920 to Jan. 1; for 1910 to Apr. 15; and for 1890 to June 1]

Farm taxes.—The census reports for 1930 are the first to carry information in regard to taxes paid on farm property. Several tax questions were carried on the farm schedule in 1925 but the information obtained was not included in the reports for that year. The two tax inquiries on the general farm schedule of 1930 were required to be answered only by owner-operators. However, the data presented herein are limited to farms operated by full owners who answered both of the following tax questions:

If you own all or part of this farm, give total amount of taxes paid or payable by you in the year 1929 on all property of this farm owned by you. (Include real-estate taxes, personal-property taxes on livestock and machinery, and special assessments, but omit taxes for irrigation or drainage districts.)

How much of the taxes reported above was paid or payable

on land and buildings of this farm?

An additional caution was given the enumerators—"Do not include poll taxes, income taxes, nor taxes on property not used in the farm business, such as notes, stocks, bonds, city real estate, etc.

Some other forms of taxes, paid by farmers in varying degrees, which are omitted in the figures given herein for full owners are automobile-license fees, gasoline taxes, Federal and State inheritance taxes, and taxes paid indirectly. Neither do the figures

include certain fees, such as fertilizer, seed, and feed inspection, which are levied by many States.

The replies of full owners who answered the two questions listed above are shown respectively under the headings "All farm property taxes" and "Real-estate taxes" while the difference between the two amounts is listed under "Other property taxes." The statistics given herein for the amount of the taxes also include the number of farms reporting taxes with their acreage and value.

From this information, figures have been derived for the average amount of taxes per farm, the average real-estate tax per acre, the tax rate per \$100 of the reported full value of land and buildings, and the proportion of the total reported taxes represented by taxes on the real estate. The value of livestock and of implements and machinery is not available for those farms reporting taxes, hence, a direct comparison of the taxes other than real-estate taxes can not be made with the value of these two classes of farm property.

One tabulation was made for all farms of full owners who gave an answer to the two tax questions and separate tabulation was made for those farms of full owners who did not own additional farm land.

Table 26.—FARM TAXES OF FULL OWNERS, REPORTING BOTH TOTAL TAXES AND REAL-ESTATE TAXES, FOR THE UNITED STATES, CENSUS OF 1930

[Number of farms, acreage, and value, as of Apr. 1, 1930, with taxes for 1929 (paid or payable). Differences from figures previously published due to revisions in Park County, Wyo., and Statistics for divisions and States in Tables 28 and 29]

¹ Less than one-tenth of 1 per cent.

Taxes paid or payable in 1929 by full owner-operators.—A report was secured for the two tax questions from 2,565,157 full owner-operators representing 88.1 per cent of the 2,911,644 full owner-operators in the United States in 1930. Their total taxes, paid or payable in 1929, amounted to \$281,402,863, or an average of \$110 per farm reporting, and their realestate taxes amounted to \$238,939,589 which was 84.9 per cent of the total taxes. Of those who answered the two tax questions, a separate tabulation was made for 2,019,146 who did not own additional farm land, for which the average tax per farm reporting was \$105.

This second tabulation for the smaller group is also presented by size of farm in Table 27 for the United States and in Table 30 by divisions and States, the size being measured by the acreage of all land in the individual farms.

The number of farms included in the second tabulation for full owners owning no other farm land (shown in Table 26) for which both total taxes and real-estate taxes were reported, represented 32.1 per cent of all farms, while their acreage represented only 24.8 per cent of the total farm acreage, and their value 30.2 per cent of the total value of all farms. It is evident, therefore, that the farms of those reporting taxes were smaller in average size and were of higher value per acre than all remaining farms. The proportion of all full-owner farms and of all farms, represented by those reporting, was much higher for some counties and some States than for others. Thus, all averages and percentages based upon the reported totals for States, geographic divisions, and for the United States are not representative of all full-owner operated farms.

What are thought to be fairly representative figures for all farms are presented instead of figures which would be more representative of full-owner farms only. In doing so, it was necessary to assume that taxes were assessed on the basis of value and that the tax rate per \$100 of reported true value of land and buildings in each county for full-owner farms, whose owners owned no other farm land, was representative of that for the farms operated by part owners, managers, and tenants. It is recognized that further refinement might be useful through the possibility that the value for farms in the greater value groups may be more often understated than the value for farms of smaller value groups, that the tax rate per \$100 of value may vary inversely with the total value of farms. Many other difficulties are inherent in such derived figures, so that the hypothetical nature must be recognized, and they must not be used as actual tax figures.

Table 28 therefore, shows averages and percentages for the actual reports for those full-owner farms whose owners did not own additional farm land, and similar averages and percentages as calculated for all farms.

The detailed method in arriving at these new figures follows: The tax rate per \$100 of value of farm land and buildings, as obtained from actual reports of full owners who owned no other farm land, for each county.

Table 28.—Average Real-Estate Tax Per Acre and Ratio of Real-Estate Taxes to Both Value of Land and Buildings and to All Farm Property Taxes, as Reported for Farms of Full Owners Owning no Other Farm Land and as Calculated (Hypothetical) for All Farms, by Divisions and States: 1929

[All averages and percentages designated "as reported" are based on figures in Table 30; see headnote on that table. See text discussion for derivation of those designated "as calculated"]

was applied to the total value of all farm land and buildings in that county as reported for April 1, 1930, and the product was the hypothetical amount of realestate taxes for that county in 1929. A consolidation was made of county totals for real-estate taxes into State totals and the latter, for each State, was divided by the total acreage of all farms in the State which gave a new tax rate per acre. The hypothetical State total for real-estate taxes was also used to arrive at a new figure for the tax rate per \$100 of value. In arriving at the new ratio of real-estate taxes to all farm property taxes, the hypothetical county totals for real-estate taxes were divided by the percentage which real-estate taxes formed of the total taxes for the farms reporting, and a consolidation was made for the State and this sum was divided by the hypothetical total for realestate taxes for the respective State.

Average real-estate tax per acre for farm land.—The average real-estate tax per acre, as reported for full-owner farms whose owners did not own additional land, was \$0.74 as compared with \$0.58, the hypothetical average derived for all farms as previously outlined. In some States the difference between the

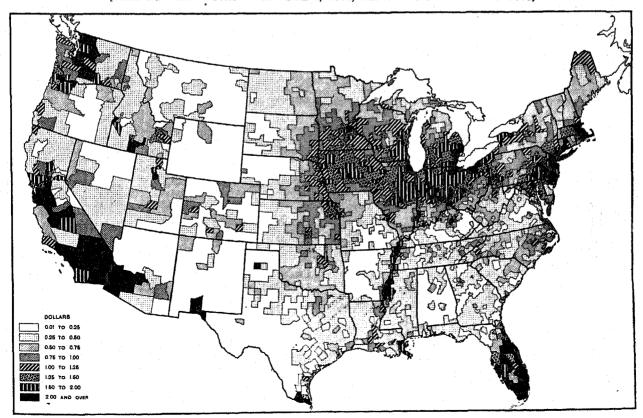

figures presented for the two averages is material, while in others the difference is slight. In 25 States the derived hypothetical tax per acre is less than the average based on the actual reports, in 1 State the two averages are the same, and in 22 States the hypothetical average is greater.

Tax rate per \$100 of full value.—This rate for the United States, based on actual reports, was \$1.26 as against the hypothetical rate of \$1.19 as computed for all farms. Smaller differences among the States were noted for this item than were ascertained for the average real-estate tax per acre. In 18 States the hypothetical rate is less than that based on actual reports, in 15 States it is the same, and in 15 States it is greater.

Ratio of farm real-estate taxes to all farm property taxes.—This percentage ratio, when computed for the actual reports and hypothetically for all farms, changes less than the figures for either the average tax rate per acre or the average tax rate per \$100 of value. Thus, based on actual reports, the percentage was \$5.4, whereas the hypothetical percentage for all farms was \$4.8.

AVERAGE FARM REAL-ESTATE TAXES PER ACRE, FOR FARMS OPERATED BY FULL OWNERS OWNING NO OTHER FARM LAND, BY COUNTIES, CENSUS OF 1930

[FARM ACERAGE REPORTED FOR APRIL 1, 1930, AND TAXES FOR THE YEAR 1929]
