Chapter IV.—FARM LABOR, USE OF FERTILIZER, FARM EXPENDITURES, AND CASH RENT

Introduction.—This chapter presents statistics collected in the 1959 Census of Agriculture on farm labor; use of fertilizer and lime on farms; specified farm expenditures; and cash rent paid by tenant farm operators renting land on a cash basis. For comparative purposes, there are data from previous censuses.

Except for Alaska and Hawaii, data for 1959, 1954, and 1950 are estimates based on reports from a sample of approximately 20 percent of the farms. Some of the data for 1945 was based on a sample of approximately 5 percent of the farms. When data are estimates based on a sample of farms, a headnote for the table so indicates.

For a description of the procedures used in the enumeration and in the processing of statistics, for a description of the sampling procedure, and for data showing reliability of estimates based on the sample, see the Introduction to this volume.

Presentation of Statistics.—The text, charts, maps, and summary tables are presented in this chapter in four parts: Part 1 deals with farm labor; part 2, the use of fertilizer and lime; part 3, specified farm expenditures; and part 4, cash rent. Some of the tables present data for 1959 only; other tables include comparative data for earlier censuses.

Part 1.—FARM LABOR

Estimates for farm workers for the 1959, 1954, and 1950 censuses were based on a sample of approximately 20 percent of all farms. Farm workers include farm operators, unpaid family labor, and hired workers. Hired workers comprise both regular workers (those employed for 150 or more days during the year) and seasonal workers (employed for less than 150 days during the year). Data on hired workers include the number of workers paid on a monthly, weekly, daily, hourly, and piece-rate basis; the average wage rate and average hours worked by monthly, weekly, and daily workers; and the wage rate for hourly workers.

The Specified Farm Labor Work Week.—Data on farm labor relate to the number of workers for a specified week. Satisfactory counts of farm workers for an entire year cannot be obtained because of the difficulty of obtaining accurate reports when there are large seasonal variations in the number of workers on some farms, the double counting of farm workers who move from farm to farm as seasonal work changes, and the double counting of farm operators who work as hired workers for other farm operators, and of unpaid family workers on some farms working as hired workers on other farms.

During recent censuses, the agriculture questionnaire has specified that the number of farm workers should be reported for a selected week. In 1959 and 1950, the selected week was the week prior to the census enumeration. In 1954, there were two selected weeks: (*a*) for 33 States, the calendar week of September 26–October 2, and (*b*) for the remaining 15 States, the week of October 24–30. In 1945 and 1935, the first week in January was selected and in 1940, two weeks, March 24–30, 1940, and September 24–30, 1939, were selected.

Data on farm labor for 1959 are not fully comparable with earlier censuses since they relate to different periods or seasons of the year. More persons are employed at farm jobs during the harvest season than at other periods. Moreover, the selected workweek for some censuses was a definite calendar week, and for others it varied with the date of enumeration.

During a census enumeration, the period for collection of information extends over several weeks. When the number of farm workers varies from week to week because of changes in farm operations, farm operators have difficulty recalling the number of workers employed, particularly when the week for which the information is requested was not the most recent week. Therefore, for the 1959 census, data on the number of farm workers were asked for the week preceding the enumeration, even though this resulted in the reporting of the number of farm workers for some of the farms for one week and other farms for another week.

Definition of Farm Labor.—The enumerator was instructed to include as farm labor—

(a) Labor in fields, orchards, or home gardens.
(b) The care and feeding of livestock and poultry.
(c) Irrigation of crops.
(d) Transportation of farm products from his farm to market by the farm operator.
(e) Transportation of feed, fertilizer, and other supplies to the farm by the farm operator.
(f) Care and cleaning of milk pails and separators.
(g) Maintenance and repair of farm machinery and equipment.
(h) Regular farm help used in constructing or repairing farm buildings and fences.
(i) Contract farm work for which labor is hired, but for which machines and equipment are furnished by the farm operator.
(j) Contract work done by persons supplied by a labor contractor or by cooperative organizations such as a citrus cooperative.
(k) Planning farm work.
(l) Keeping farm records.
(m) Supervision of hired farm employees.
(n) Cutting firewood, fence posts, timber, pulpwood, etc., except by persons specifically hired for this purpose.

Examples of the type of work not to be included were—

(a) Housework.
(b) Contract construction work.
(c) Custom work for which equipment and operating labor are hired, such as custom combining, hay baling, etc.
(d) Repair, installation, or construction work by persons employed specifically for such work.

For 1959, enumerators were instructed to include as hired workers, workers employed by a labor contractor, a cooperative organization, a processor, etc., to perform farm work, such as harvesting of vegetable crops, picking fruit, etc. However, a review of available data indicates that farm operators and census enumerators usually did not report such workers as hired farm workers. Farm operators do not consider such contract workers

as hired farm labor, as they do not employ them directly. Very often such contract workers are employed to harvest crops that were sold by the farm operator in the field or on the tree, or to perform farm work for which the farm operator pays a fixed charge. Moreover, in the case of large scale operations involving such contract workers, the farm operator does not know how many contract persons worked on his farm during a selected week.

Separate counts were obtained for the farm operator, unpaid members of the farm operator's family, and hired farm workers. For the farm operator, a separate count was made for those working fewer than 15 hours and those working 15 hours or more. For unpaid members of the farm operator's family, only those engaged in farm work for 15 hours or more during the selected week were to be reported.

Generally, the period of greatest activity on most farms occurs at harvest time during the period of June to September. There are exceptions, such as on citrus and vegetable farms in Florida, California, Texas, and parts of the Southwest where harvesting occurs during the winter months.

The Operator.—The typical farm operator not only plans the farm operations, but is also a part of the farm labor force. He has the dual role of planning and execution.

The advent of modern farm machinery, electricity, etc., has permitted the farm operator to dispense with much of the hired labor that was necessary in the past. Except in peak periods, the operator of a small or medium-sized farm can perform the necessary work by himself.

Three million of the approximately 3¾ million farm operators worked one hour or more on their farms during the selected week in 1959. The remaining operators included those who did no work and those for whom a report was not obtained. Operators of part-time and part-retirement farms and of farms such as fruit and vegetable farms, on which the harvest had been completed by the time of the census enumeration made up a significant part of those operators who reported no work during the selected week.

Some farmers operate their farms without any assistance, some use family or hired labor, and some use a combination of family and hired labor. While most operators both plan and execute farm operations, a few, such as hired managers, plan and supervise only. Other operators such as sharecroppers, may provide only the labor and leave most of the planning to the landlord.

The number of operators who worked one hour or more during the specified workweek decreased from nearly 5 million in 1945 to approximately 3 million in 1959. This decrease closely parallels the change in total number of farms. Of the 3 million operators who worked one hour or more during the specified week in 1959, more than half (53.7 percent) reported no additional farm labor during the selected week and 30.2 percent reported the use of unpaid workers of their family only in addition to their own labor.

Unpaid Family Labor.—The farm work performed without pay by any member of the farm operator's family was considered unpaid family labor provided the family member or members worked 15 hours or more during the specified week. The use of this type of farm labor is declining, especially in those areas where opportunities exist for nonfarm employment. In 1959, slightly less than 1¾ million family members of farm operators were reported as unpaid family workers compared with 2¾ million unpaid family workers reported on 1¾ million farms in 1954.

Hired Workers.—For census purposes, hired workers are divided into 2 groups: Those working 150 days or more (regular workers) and those working less than 150 days (seasonal workers).

The questions on hired labor in 1959 were similar to those in 1954 and 1950. In 1950, additional information on "perquisites" was obtained by asking if the hired workers were furnished in addition to cash wages: (*a*) a house, (*b*) room and board, (*c*) other perquisites, (*d*) no perquisites.

In the last three censuses, information relating to the number of hired workers and wages and hours worked was obtained for all hired workers. In 1959 and 1954, when information regarding wages and hours worked was not reported for farms with hired workers, the data were supplied during office processing on the basis of pertinent data elsewhere on the questionnaire and from reports for similar farms in the same area. For 1950, data for wages and hours worked were not estimated but separate totals obtained and published for workers for whom the wage rates and number of hours worked were not reported.

Basis of Payment, Wage Rates, and Hours Worked.—Data on monthly, weekly, daily, hourly, and piece-rate workers were obtained for the 1959, 1954, and 1950 censuses. These data included the number of workers in each category, the wage rate, and the average number of hours worked. If there were two or more workers in any category on an individual farm and their wage rates or hours varied, the enumerator was instructed to report the average wage or hours for each category.

The average cash wage per month, week, day, and hour, and the average number of hours worked per month, week, and day for each basis of payment represent averages per worker. To obtain these averages, the average hours and average wage rates for each farm were multiplied by the number of workers in each basis-of-payment group. The accumulated totals of these products were then divided by the total number of workers in the corresponding group.

Farm Labor Force, 1820–1960.—The census of population provides the only available data showing the number of workers employed in agriculture over a long period of time. The detailed occupation and industry groups used for classifying workers as "agricultural" in the census of population are not identical with those used in the census of agriculture. The major occupation groups "farmers and farm managers" and "farm laborers and foremen" and the industry groups "agricultural" designated in the census of population include the following types of workers not classified as farm workers in the census of agriculture: (1) Persons employed on farms at purely service activities such as carpenters, mechanics, bookkeepers, and truck drivers; (2) persons engaged in agricultural activities other than strictly farm operations, such as crop dusting, spraying, and cotton ginning; and (3) persons working on places not qualifying as farms for purposes of the census of agriculture; and (4) persons employed by processors or contractors who are not farm operators to perform farm work such as harvesting.

The declining percentage of the labor force engaged in agricultural pursuits may be an indication of increasing efficiency of production in agriculture. The trend toward specialization in agricultural production is significant in the shift in the production of farm supplies and equipment and the performance of farm services from farm workers to nonagricultural workers. Much of the work required in the processing, transportation, and distribution of farm products formerly done by "agricultural" workers is now performed by "nonagricultural" workers. In 1820, the farm labor force represented over 70 percent of persons employed in all occupations. In 1960, only 6 percent of the labor force was engaged in agricultural pursuits. The number of persons employed in agriculture in 1960 was less than the number employed in 1850 and only about one-third the number employed in 1910. In 1820, the farm labor force was equal to 21.5 percent of the total population. In 1960, the farm labor force represented less than 2½ percent of the total population.

Table 1.—Relation of Labor Force in Agriculture to Total Labor Force and to Total Population of the United States: 1820 to 1959

Year	Labor force			Total population of United States	
	All occupations (number)	Agricultural pursuits (number)	Percentage farm labor force is of total (percent)	Total (number)	Percentage farm labor force is of total population (percent)
	Persons 14 years old and older				
1960	67,990,069	4,085,431	6.0	179,323,175	2.3
1954	[2] 63,924,000	[2] 6,027,000	9.4	161,763,000	3.7
1950	59,015,464	6,860,302	11.6	151,325,798	4.5
1940	51,742,023	8,833,324	17.1	131,669,275	6.7

1920	42,433,535	11,448,770	27.0	105,710,620	10.8
1910	37,370,794	11,591,767	31.0	91,972,266	12.6
1900	29,073,233	10,911,998	37.5	75,994,575	14.4
1890	23,318,183	9,938,373	42.6	62,947,714	15.8
1880	17,392,099	8,584,810	49.4	50,155,783	17.1
1870	12,924,951	6,849,772	53.0	39,818,449	17.2
1860	10,532,750	6,207,634	58.9	31,443,321	19.7
1850	7,697,196	4,901,882	63.7	23,191,876	21.1
1840	5,420,000	3,719,951	68.6	17,069,453	21.8
1830	3,931,537	2,772,453	70.5	12,866,020	21.5
1820	2,881,000	2,068,958	71.8	9,638,453	21.5

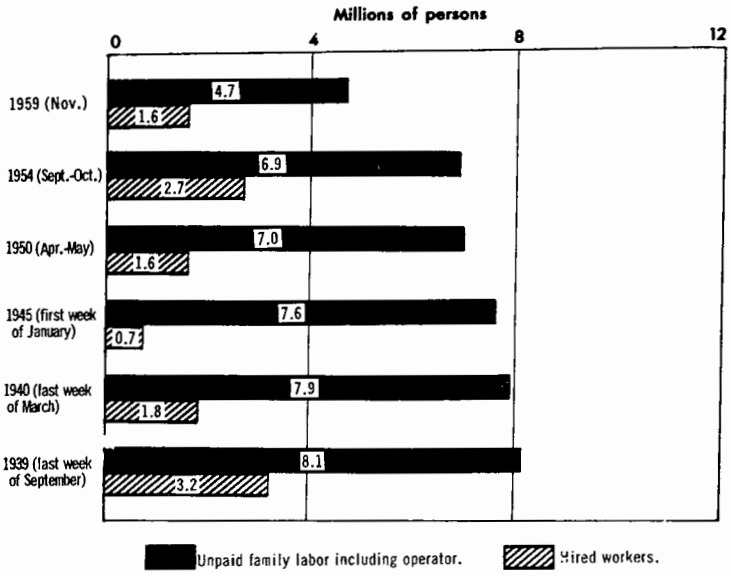
[1] Data for 1959 and 1950 pertain to the United States, for other years to the conterminous United States.
[2] Not strictly comparable to decennial census data. Experienced civilian labor force as of April 1, 1954.

The proportion of the labor force engaged in agricultural pursuits declined gradually as improved farming techniques and new and improved farm equipment were invented and placed in general use. The horse-drawn mowing machine replaced the scythe and grain cradle; the fanning mill for cleaning grain gave way to threshing machines; hoes gave way to shovel cultivators and the steel walking plows; and the application of steam and gasoline engines to portable uses in farming enabled the agricultural worker to increase his output. The mechanization of farm operation had advanced to a point, by 1910, where the total number of persons engaged in agriculture began decreasing even though the total population was growing. Since 1910, new machines, electricity, and biological techniques have enabled the farm labor force to produce more and more. Since 1910, a remarkable amount of labor has been transferred out of agriculture. Since 1920, the agricultural labor force has been reduced by more than one-half. It has declined about 40 percent since 1950.

The growing use of labor-saving equipment on the farm, the development of varied sizes of power units to meet the needs of most sizes of farm operations, the elimination of many small-scale enterprises on farms, the use of more fertilizer, better and hybrid seeds, increased irrigation, better pest and insect control, increased use of herbicides, better feeding, increasing size of farm business, increased use of farm custom work, better farm management, and a significant increase in the agricultural services performed by nonfarm groups have resulted in a remarkable decrease in the farm labor force and an increase in output per agricultural worker, and have enabled a rapidly declining farm labor force to provide for a growing population and to furnish food for the people of other countries.

Farm Labor Force, 1959.—The number of persons working on farms includes farm operators, unpaid members of the farm operators' families, and hired farm workers. Because of the seasonality of farm operations, there is considerable fluctuation during the year in the size of the farm work force and in the hours of work by farm workers. At some seasons, particularly at harvest

FARM LABOR—NUMBER OF UNPAID FAMILY AND HIRED WORKERS: 1935 TO 1959



time, the farm work force may be increased by half. The following estimates taken from the special Labor Force Report of the Bureau of Labor Statistics of the U.S. Department of Labor provide an indication of the fluctuation in the number of agricultural workers from month to month in 1959:

Week ending—	Number of workers (1,000)			
	Total	Self-employed workers	Unpaid family members	Wage and salary workers
January 17	4,693	2,834	632	1,227
February 14	4,692	2,920	662	1,111
March 14	5,203	2,992	835	1,375
April 18	5,848	3,161	1,095	1,594
May 16	6,408	3,239	1,451	1,720
June 13	7,231	3,285	1,786	2,160
July 18	6,825	3,137	1,544	2,142
August 15	6,357	3,042	1,355	1,960
September 12	6,242	2,995	1,246	2,001
October 17	6,124	2,997	1,121	2,006
November 14	5,601	2,971	1,004	1,626
December 12	4,811	2,749	723	1,342

Because of this variability in the size of the farm work force, an attempt is made to count the number of farm workers during only one week of the year covered by the census of agriculture. This procedure of counting the farm labor force affects the number of persons reported as farm labor.

Even though machines and electricity perform much of the work on farms, farm labor is needed to manage the farm operations, care for livestock and poultry, and for harvesting the crops. The size of the farm labor force cannot be indicated accurately by a single figure. The number of persons working on farms changes from year to year and from month to month in the same year. Farm operators and unpaid members of their families comprised 75 percent of the 6.3 million persons working on farms the week preceding the census in 1959. Farm operators working one or more hours totaled 3.0 million, or 48.1 percent of the total; unpaid family workers working 15 hours or more during the week preceding the census numbered 1.7 million, or 26.9 percent of the total; and hired workers amounted to 1.6 million, or 25.0 percent of the total. Farm operators made up the only farm labor on 1.6 million, or 44 percent, of all farms and the operator and/or members of his family comprised the farm labor

force the week preceding the census on 2.6 million or 70.9 percent of all farms. Hired workers were employed on only 548,000 farms. Of these, 62,000 farms with five or more hired workers had over half of all the hired workers on all farms.

Recently the decline in the farm labor force has been at a rapid rate. From September 1939 to 1959, the number of farm operators and unpaid members of the families of farm operators declined from approximately 8.1 million to 4.7 million persons, or a decrease of 41.6 percent. About three-fifths of the decline occurred during the period 1954 to 1959. The number of hired workers decreased from approximately 3.2 million in September 1939, to 1.6 million in 1959, or a decrease of 50 percent. About two-thirds of the decrease occurred during the period 1954 to 1959.

The decrease in the number of hired workers during the last 10 years has occurred largely in the number of seasonal workers. Part of the change in the number of seasonal workers shown by the following data results from counting the workers at different periods in the year.

	1959 (Oct.–Nov.)	*1954 (Sept.–Oct.)*	*1950 (April–May)*
Regular hired workers:			
Farms reporting	316,571	332,932	504,527
Number of workers	700,256	691,068	1,036,115
Seasonal hired workers:			
Farms reporting	306,797	504,556	271,621
Number of workers	883,897	2,038,582	541,631

The reduction in the number of seasonal workers has been accompanied by a decrease in the number of hired workers paid on a daily, hourly, and piece-rate basis. Because the counts of workers for 1959, 1954, and 1950 relate to different periods of the year, the differences indicated by the following data are the result, in part, of seasonal differences in the number of hired farm workers.

	1959 (Oct.–Nov.)	*1954 (Sept.–Oct.)*	*1950 (April–May)*
Hired workers paid on monthly basis:			
Farms reporting	161,590	204,484	266,531
Number of workers	264,865	316,231	400,771
Hired workers paid on weekly basis:			
Farms reporting	106,391	98,919	103,932
Number of workers	207,229	195,249	195,265
Hired workers paid on daily basis:			
Farms reporting	136,508	217,335	226,622
Number of workers	318,810	542,239	472,307
Hired workers paid on hourly basis:			
Farms reporting	163,217	209,256	138,738
Number of workers	434,082	616,893	359,223
Hired workers paid on piecework basis:			
Farms reporting	51,895	121,279	24,868
Number of workers	359,167	1,059,038	97,112

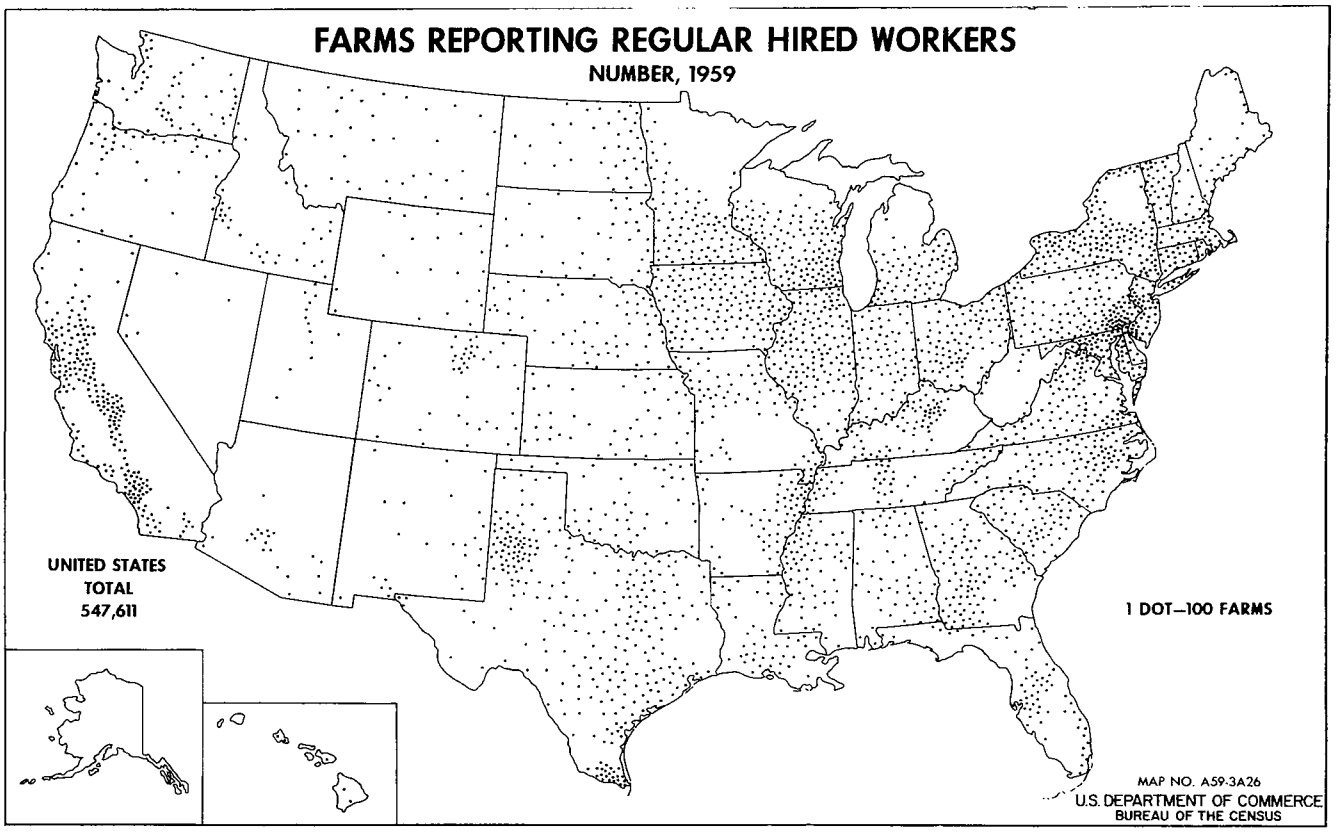
Farm Operators.—Farm operators are the chief source of manpower on farms. Farm operators comprised the largest of the three major groups of farm workers on farms in 1959. Of the 3.7 million farm operators, 660,000 did not work one or more hours on the farm operated during the week preceding the census. These 660,000 were operators who worked at other jobs (1,107,606 farm operators worked off their farms 100 days or more in 1959 and 877,819 worked off their farms 200 days or more), farm operators on part-retirement farms where there was no farm work required during the selected week, and farm operators on some types of farms such as fruit farms, vegetable farms, wheat farms, etc., where the kinds of agricultural operations did not require farm labor during the specified week. Of the 3.7 million farm operators, only 3.0 million worked one or more hours on the farm operated during the week preceding the census. There is less seasonal fluctuation in the number of farm operators working on farms than there is in the number of unpaid members of farm operators' families or in the number of hired farm workers.

Unpaid Family Workers.—The second largest group of farm workers is the 1.7 million unpaid members of farm operators' families working 15 or more hours on the farm. Most unpaid members of farm operators' families working on farms are wives and older children under 25 years of age. The number of these workers varies greatly by season and is twice as large during the summer as during the winter.

Hired Farm Labor.—Hired farm labor is the smallest of the three major groups of farm workers. This part of the farm labor force totaled 1.6 million persons during the week preceding the census enumeration in 1959. More than half of the total hired farm labor force comprised seasonal workers, employed for less than 150 days on the farm on which they were working. The number of seasonal hired workers varies greatly during the year as farm labor requirements are highly seasonal. Peak farm labor requirements in each area are concentrated in a relatively short period of time. Each of the major agricultural crops has a different seasonal pattern of labor requirements. While the overall requirement for seasonal labor has declined, the need for seasonal hired labor at the seasonal peak has become more critical. The mechanization of agricultural operations has proceeded unevenly and the need for farm labor has been sharply reduced for some operations and eliminated for others. For some farm operations, machines have not been developed or placed in general use. Moreover, the season for harvest has been shortened for some crops so as to reduce the marketing period and minimize crop losses from adverse weather.

Hired farm workers during the week preceding the census enumeration were reported on 548,000, or 14.8 percent, of the farms in 1959. However, 1,784,000, or 48.1 percent, of the farms employed some hired labor in 1959. Expenditures of $1,000 or more for hired labor were made on only 431,000, or 11.1 percent, of the farms. Only 241,000 farms, or 1 farm out of 15, had two or more hired workers in 1959. More than half of all the farm workers were on the 62,000 farms having five or more hired workers. Only eight States had as many as 50,000 hired farm workers and the total of those eight States represented almost one-half of all the hired farm workers in the United States. Two States, Texas and California, had almost one-fifth of all hired farm workers.

Only 1 farm out of 12 had one or more regular hired workers in 1959. Only 110,000 farms had two or more regular hired workers. About 40 percent of all regular hired workers were on the 23,000 farms employing five or more regular hired workers in 1959. Only three States, New York, Texas, and California, had as many as 5,000 farms having two or more regular hired workers.



Hours of Work for Hired Farm Labor.—Data on the hours worked are available for the census of agriculture only for the persons employed as hired workers.

The hours worked as reported in the census reflect widely varying types of workers and working arrangements. Some workers are employed part time, even though they may be paid on a monthly or weekly basis. These part-time workers account, in part, for the variation in the number of hours worked.

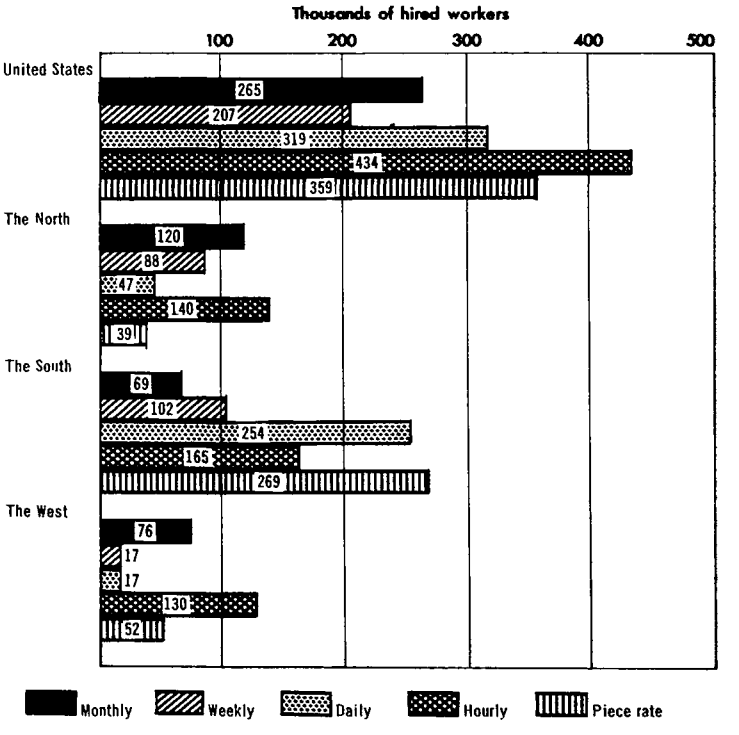
The hours of work are available for hired farm workers on the basis of the period for which they were employed. Approximately one out of every six hired workers was employed by the month. The average hours of work by hired workers paid on a monthly basis was 209 hours for the conterminous United States. In 1954, the corresponding average hours worked per month was 231.

Approximately one out of every seven hired workers on farms was paid on a weekly basis. The average hours worked per week for these workers was 46 for the conterminous United States, a decrease of 5 hours or almost 10 percent from the average for 1954.

One out of every five hired farm workers in 1959 was paid on a daily basis. The average number of hours worked per day for the hired workers was 8.5 hours per day as compared with 8.8 hours per day in 1954. Four-fifths of the hired farm workers paid on a daily basis were in the South.

Approximately one-fourth of all hired workers during the week preceding the census in 1959 were employed on a piece-price basis. No data are available regarding the hours of work for this group of hired farm workers. About 75 percent of the hired workers employed on a piecework basis were in the South.

NUMBER OF HIRED WORKERS BY BASIS OF PAYMENT BY REGIONS: 1959



From 1954 to 1959 there was a significant reduction in hours of work of hired farm workers as indicated by the following data:

	1959	*1954*	*1950*
Average hours of work per month for workers paid on monthly basis	209	231	239
Average hours of work per week for workers paid on weekly basis	46	51	52
Average hours of work per day for workers paid on daily basis	8.5	8.8	9.2

Cash Farm Wage Rates.—The data available on farm wage rates represent only cash payments. Many hired farm workers receive perquisites such as room and board, food, house, etc., in addition to the cash payments. The wage rates reflect widely varying types of workers and working arrangements. The variations are indicated by the distribution of farms with hired workers by wage rates as well as by hours worked. (*See* tables 7, 8, and 11.) Some hired workers may be working only part time, even though they are paid on a monthly or weekly basis. In some cases, young persons or elderly persons are paid small wages in addition to board, etc., and these persons have been reported in the census as hired workers. Moreover, some workers receive a share of the farm products in addition to the cash payments.

For the United States, the average cash wage rate per person was $198 per month for workers paid by the month, $42 per week for workers paid by the week, $5.25 per day for workers paid by the day, $0.97 per hour for workers paid by the hour, and $6.46 per day (for Friday of week preceding enumeration) for persons working on a piecework basis.

Wage rates vary significantly by States. Wage rates are higher in the Western States and lower in the Southern States.

Wage rates increased from 1954 to 1959, although not as much as during the period from 1950 to 1954 as indicated by the following data for the conterminous United States:

	1959	*1954*	*1950*
Average wages per month for workers paid on monthly basis	$195.00	$162.00	$118.00
Average wages per week for workers paid on weekly basis	42.00	38.00	28.00
Average wages per day for workers paid on daily basis	5.25	5.13	3.66
Average wage per hour for workers paid on hourly basis	.95	.88	.67

However, there was a significant decrease from 1954 to 1959 in the hours of work for workers paid on a monthly, weekly, and daily basis.

Table 2.—WORKERS ON FARMS DURING SPECIFIED WEEKS, BY KIND OF WORKERS, FOR THE UNITED STATES: 1935 TO 1959

[For 1959 and 1950, figures for number of workers are for the week preceding the enumeration; for 1954, figures for number of workers are for the week of September 26-October 2 or October 24-30. All 1959, 1954, and 1950 data for conterminous United States and data for hired workers by number employed for 1945 and 1940 are based on reports for only a sample of farms. See text. Figures for divisions and States in Tables 3, 8, 9, 10, and 11]

Item	Farms reporting		Number of persons working		
	Number	Percent of total	Total	Average per farm reporting	Percent of total

NA Not available. [1]Data for Alaska and Hawaii not included. [2]Data for Alaska not included. [3]Housework and contract construction work not included. For 1959, 1954, and 1950, operators who worked 1 or more hours, hired workers who worked anytime during specified week, and unpaid members of operator's family who worked 15 or more hours at farm work. For 1945, 1940, and 1939, persons 14 years old and over who worked at farm work the equivalent of 2 or more days during the specified week. For 1935, persons who worked at farm work the equivalent of 2 or more days during the specified week.

Table 3.—FARMS BY KIND OF WORKERS DURING WEEK PRECEDING ENUMERATION, BY DIVISIONS AND STATES: 1959

[Data for conterminous United States are based on reports for only a sample of farms. See text.]

	Region, division, and State	Farms reporting		Farms reporting family workers only				Farms reporting both family and hired workers				Farms reporting hired workers only	Farms with no workers reported	Percent of operators reporting as to kind of workers					
		Any family workers	Any hired workers	Total	Operator only	Operator and unpaid members of his family	Unpaid members of operator's family only	Total	Operator and hired workers only	Operator, unpaid members of his family and hired workers	Unpaid members of operator's family and hired workers only			Any family workers	Any hired workers	Family only	Both family and hired	Hired only	No workers reported

Table 9.–WORKERS ON FARMS DURING SPECIFIED WEEKS, BY DIVISIONS AND STATES: 1959 AND 1954

[Data for 1959 relate to the week preceding enumeration. For 1954, the data relate to the week of September 26 to October 2 in 33 States and to the week of October 24 to 30 for 15 States. The data for 1959 and 1954 for the conterminous United States are estimates based upon reports for a sample of farms. See text]

	Region, division, and State	Family and/or hired workers[1]				Family workers (operator and/or unpaid members of his family)

Part 2.—USE OF FERTILIZER AND LIME

Introduction.—In the 1959 Census of Agriculture, information was obtained relative to tons of fertilizer and lime and acres upon which they were used, for a sample of approximately 20 percent of farms in the conterminous States, and for all farms in Alaska and Hawaii. Additional information was obtained on the acres of pasture and specified crops fertilized, and the amount of fertilizer, liquid and dry, used on each crop.

Fertilizer and Lime.—The enumerators were instructed to include all commercial fertilizer and lime used in 1959, regardless of when it was purchased, whether purchased by the landlord, the tenant, or both, jointly. Regardless of who purchased the fertilizer, it was to be reported on the questionnaire of the person who was operating the land on which it was applied. If the landlord was the purchaser, but the tenant used the fertilizer on his crops, he (the tenant) was to report the fertilizer on his questionnaire. Manure, straw, gypsum, and refuse materials were not to be reported as fertilizer. Lime included ground limestone, hydrated and burnt lime, marl, oyster shells, and other forms of lime. Lime used for spray or sanitation purposes was excluded.

The fertilizer and lime may have been purchased in 1958, and may have been used in 1959 on crops planted in 1958 for harvest in 1959, or on crops planted in 1959 for harvest in 1960. If several applications were made during the year, the total amounts of fertilizer and lime were reported, but the acreage was counted only once.

The data shown for the census on the use of fertilizer and lime do not represent the total fertilizer and lime used in the United States. Considerable quantities of both fertilizer and lime are used on places not included in the census of agriculture, such as golf courses, lawns and gardens of homes, places with insufficient agricultural operations to qualify as census farms, and farms lizer, it was to be reported on the questionnaire of the person who with no agricultural operations, and farms in the Soil Bank. In some States the quantity of fertilizer and lime used by such nonfarm places comprises a significant part of the fertilizer and lime used in the State.

The figures on the use of fertilizer and lime are estimates based on the tabulation of data for only a sample of approximately 20 percent of the farms. (See page XVIII of the Introduction for a description of the sample.) These figures are subject to sampling errors. Measure of these sampling errors may be obtained from tables 4 and 5 of the Introduction.

When all, or nearly all, of the farms having a selected crop report the use of fertilizer, the estimated acres fertilized may exceed the acres harvested because of sampling variation.

The questionnaire for the 1959 census contained, for the first time, separate questions regarding the quantities of liquid and dry fertilizer used. Liquid fertilizers were to include those fertilizers or fertilizing materials purchased in the fluid or liquid form (including liquefied gases).

The total tons of liquid fertilizer used in 1959 as shown by the census was 1,591,496 tons. About 40 percent of the liquid fertilizer was used for corn, about 13 percent for cotton, and about 7 percent for wheat. Almost one-fifth of the liquid fertilizer was used in California.

The number of tons used is the only measure of the quantity of fertilizer used obtained in the census, as fertilizer or fertilizing materials used may not indicate accurately the relative amounts of plant nutrients used for various crops or areas. There is wide variation in the plant nutrient content of fertilizers used.

Commercial fertilizer and lime used in 1959 under soil-conservation programs were to be reported.

The fertilizer inquiries on the questionnaire contained six parts listing the crops to which fertilizer might be applied. Three parts were uniform for all States:

(a) Hay and cropland pasture
(b) Other pasture (not cropland)
(f) All other crops

The other three parts related to specified crops, which varied by State, so that it was possible to obtain detailed data for three important crops commonly fertilized in each State. Fertilizer applied to crops other than the three selected for each State was to be reported under "All other crops." If two or more crops were harvested from the same land in 1959 or if one crop was harvested and the land planted to another crop for harvest after 1959, and both crops were fertilized in 1959, then the acreage fertilized was to be reported for each crop. In the case of wheat and some other crops planted in the fall of 1959 and fertilized at the time of planting, the acreage fertilized may relate to the acreage for harvest in 1960 and not to the acreage harvested in 1959. The inquiries regarding fertilizer and lime on the questionnaire for 1959 were as follows:

Section XI.—FERTILIZER AND LIME

Include all fertilizer and lime used on this place *during 1959*, whether purchased by you or by your landlord.

271. On how many acres were **commercial fertilizer** and **fertilizing materials** used *in 1959?* . . . . . None ☐ Acres _____

(*If "None," mark* **X** *and skip to question* [272].)

Was fertilizer used *this year* on any of the following crops—	No	Yes	(1) On how many acres was fertilizer used?	How much was used— (2) Dry materials? (Include rock phosphate)		(3) Liquid materials?	
(Answer these questions, if "Yes.")			Acres	Tons	Tenths	Tons	Tenths
(a) **Hay and cropland pasture?**	☐	☐			/10		/10
(b) **Other pasture** (not cropland)?	☐	☐			/10		/10
(c) [1]	☐	☐			/10		/10
(d) [1]	☐	☐			/10		/10
(e) [1]	☐	☐			/10		/10
(f) **All other crops?** . .	☐	☐			/10		/10

[272] How many acres were limed *in 1959?* . . . . . None ☐ Acres _____

(*If "None," mark* **X** *and skip to question* [274].)

273. How much lime or liming **materials** was used *in 1959?* . . . . . Tons _____

(Include ground limestone, hydrated and burnt lime, marl, oyster shells, etc. Omit lime used for sprays or sanitation.)

[1] Items (c), (d), and (e) varied by States. See following tabulation of specified crops fertilized by States.

The three crops for which data on acres fertilized and tons of fertilizer used were obtained are indicated in the following table for each State.

Table 12.—Individual Crops for Which Fertilizer Data Were Obtained for 1959, by States

Other Published Data for Use of Fertilizer and Lime: 1959 Census of Agriculture

Where found	Geographic area for which available	Period	Presentation of data
Volume I, parts 1-50	Counties and States	1954 and 1959	County table 7.—State and county totals for use of commercial fertilizer, lime and liming materials, and crops on which commercial fertilizer was used.
	States only	1920 and 1959	State table 5.—State totals for commercial fertilizer and fertilizing materials, and lime and liming materials for 1959 with available comparative data from earlier censuses to 1920.
		1959	State totals on use of commercial fertilizer, lime and liming materials, and the crops on which commercial fertilizer was used, classified as follows: State table 17—By class of farm. State table 18—By type and class of farm. State table 19—By type of farm. State table 20—By size of farm. State table 21, 21(a), 21(b).—By tenure of operator for all States and by color and tenure of operator for the Southern States.
Volume II Chapter V	United States only	1959	Size of farm.—United States totals for tons of fertilizer and the crops and acres on which it was used.
Volume II Chapter X	States and United States	1959	Tenure of operator.—Tons of commercial fertilizer used by States; and tons, acres and specified crops on which used for the United States.
Volume II Chapter XI	United States only	1959	Economic class of farm.—Acres and tons of commercial fertilizer used, and specified crops on which they were used.
Volume II Chapter XII	States and United States	1959	Type of farm.—Tons of commercial fertilizer used by States; and tons, acres, and crops on which fertilizer was used.

Use of Fertilizer in 1959.—Fertilizer was used on nearly two out of three farms in 1959. The proportion of farms using fertilizer was much higher in the North and the South than in the West. The 2,374,000 farms reporting fertilizer use in the conterminous United States were equivalent to 74.3 percent of the farms reporting cropland harvested in 1959.

The acres fertilized in 1959 totaled 133,258,950 acres. This acreage was equivalent to 15.8 percent of the total acreage of cropland harvested and of all pastureland, except woodland pasture. The total acreage fertilized minus the acreage of hay and pasture fertilized would be equivalent to 46.5 percent of the acres of all crops harvested other than hay crops.

Z Less than 0.05 percent.

[1]Percentages for crops or pasture fertilized represent the ratio of the acreage fertilized to the total acres of crops that are harvested in the United States. The percentage for total acres fertilized is based on all cropland harvested plus the acres of pasture, other than woodland; in the case of pasture to the total acreage of pasture (excluding woodland pasture).

[2]Area of land on which fertilizer was applied. In some cases, two or more crops were fertilized and harvested from the same land.

The following summary indicates the data covering fertilizer and fertilizing materials obtained for 1959 and prior censuses.

Census of—	Kind of data obtained
1959	Commercial fertilizer and fertilizing materials in 1959—tons (separately for dry and liquid) and acres on which used. Inquiries were obtained separately for hay and cropland pasture, other pasture (not cropland), 3 important crops (which varied by States), and for all other crops.
1954[1]	Commercial fertilizer and fertilizing materials in 1954—tons, acres on which used, and cost. Inquiries were obtained separately for hay and cropland pasture; other pasture; 2 important crops (which varied by States); fruits, vegetables, and potatoes; and for all other crops.
1945[1]	Commercial fertilizer in 1944—cost only.
1940[1]	Quantity and cost of commercial fertilizer bought in 1939.
1930[1]	Quantity of commercial fertilizer bought in 1929. Amount expended was for commercial fertilizer, manure, marl, lime, and limestone. (No separate expenditure data were obtained for fertilizer alone.)
1925[1]	Amount expended in 1924 for manure and fertilizer, including lime and ground limestone. (No separate data were obtained for fertilizer alone.)
1920	Amount expended in 1919 for manure and fertilizer.
1910	Amount expended in 1909 for manure and other fertilizer.
1900[1]	Amount expended for fertilizers in 1899.
1890[1]	Amount expended for fertilizers in 1889.
1880[1]	Amount expended for fertilizers in 1879.

[1] Alaska and Hawaii not included.

Data for fertilizer use for corn, sorghums, wheat, soybeans, cotton, tobacco, Irish potatoes, sugar beets, oats, barley, sugarcane, pineapples, coffee, vegetables, and oats and other grains were not obtained for all States, hence, the data given for each of these crops understate the use of fertilizer on these crops. In the States in which data were not obtained separately in 1959 for these crops, the data on fertilizer used for such crops were included with all other crops.

The following data provide a measure for the coverage of the inquiries on fertilizer use for the various crops.

Crop	States with separate inquiry for fertilizer use for the crop	Acreage of crop for all States	Acreage of crop in States with separate inquiry on fertilizer use for the crop	
			Total	Percent of acreage for crop for all States
Hay and cropland pasture	50	129,065,155	129,065,155	100.0

[1] Less than 0.05 percent.

More fertilizer is used on corn than on any other crop. In 1959 more than one-third of all fertilizer was used for corn. Corn accounted for approximately two-fifths of the acreage fertilized in 1959. Nearly 2 out of every 3 acres of corn harvested in 1959 were fertilized. In 4 out of the 10 States having 2 million or more acres of corn harvested in 1959, 80 percent or more of the corn harvested in 1959 was fertilized.

Wheat ranked second among crops in terms of the acreage fertilized. In the 26 States for which data were obtained for wheat, the acreage fertilized totaled 17.5 million acres. However, the quantity of fertilizer used on wheat was less than that used on hay and cropland pasture and on cotton.

The acreage fertilized for hay and cropland pastured was exceeded only by the acreage for corn and wheat fertilized in 1959. However, the quantity of fertilizer used on hay and cropland pasture was 2.2 million tons and exceeded the quantity used on wheat.

As measured by acres fertilized, cotton ranked fourth among the crops fertilized in 1959. Except in Texas, Oklahoma, Arizona, and New Mexico, nearly all the cotton acreage was fertilized. Separate data were not obtained on the acreage of cotton fertilized in Missouri, Florida, Virginia, Kentucky, Tennessee, and Nevada. Nearly all the acreage of cotton harvested in 1959 in these States was fertilized. In the States for which cotton was listed as a separate crop fertilized, approximately 62 percent of the cotton harvested in 1959 was fertilized.

Data were obtained for tobacco fertilized for 6 out of the 26 States reporting tobacco harvested. In the 6 States for which data were obtained for the acreage of tobacco fertilized, 98 percent of the tobacco acreage was fertilized. In the 20 States for which figures were not obtained on tobacco fertilized, nearly all the acreage of tobacco harvested was fertilized.

Information on the use of fertilizer on soybeans was obtained in 14 States that accounted for 86 percent of the acreage of soybeans harvested for all purposes in 1959. Except in the Southern States, only a small part of the soybean acreage was fertilized in 1959.

Nearly all the acreage of sugar beets harvested was fertilized. Separate data on sugar beets fertilized was obtained in 9 out of the 21 States with sugar beets harvested for sugar in 1959. These nine States accounted for 3 out of 4 acres of sugar beets harvested for sugar in 1959. In these nine States, the acreage of sugar beets fertilized was 95 percent of the acreage of all sugar beets harvested. The average quantity of fertilizer used per acre was 450 pounds; however, 24 percent of the fertilizer used on sugar beets was liquid fertilizer.

Figures on oats fertilized were obtained in 1959 in only five States. These five States had only 5 percent of the acreage of oats harvested in 1959.

Data on the use of fertilizer on sorghum crops were obtained in four States. These States accounted for 71 percent of sorghums harvested for all purposes in 1959.

Information on the use of fertilizer on Irish potatoes was obtained in 1959 for 23 States. Those States accounted for four-fifths of the acreage of Irish potatoes harvested in 1959.

The use of fertilizer on barley was obtained for only seven States. Those States accounted for 22.7 percent of the acreage of barley harvested in 1959. The data on fertilizer use for those States were as follows:

State	Farms reporting barley fertilized	Tons of fertilizer used	Acres fertilized	Percent of barley acreage fertilized	Pounds of fertilizer used per acre fertilized
Total	13,304	52,435	985,644	30.5	106
Montana	2,498	5,750	236,751	13.6	49
New Mexico	233	1,081	10,567	36.6	205
Arizona	642	12,470	104,976	79.0	238
Utah-Nevada	1,629	3,517	32,527	20.9	216
Washington	3,163	12,406	325,250	48.3	76
Oregon	5,139	17,211	275,573	54.9	125

Data on the use of fertilizer on sugarcane in 1959 was limited to the State of Hawaii. The summary for Hawaii follows:

Percent of farms with sugarcane reporting use of fertilizer	85.5
Acres fertilized, total	209,903
Percent of acres in sugarcane	95.4
Tons of fertilizer used, total	156,044
Average per acre fertilized, pounds	1,487

Data are not available on the use of fertilizer on the 333,789 acres of sugarcane in States other than Hawaii.

Pineapples are of commercial importance only in Hawaii and information on the use of fertilizer was obtained only for that State. The summary for pineapples is as follows:

Percent of farms with pineapples reporting use of fertilizer	95.7
Acres fertilized, total	57,183
Percent of acres in pineapples	90.6
Tons of fertilizer used, total	28,275
Average per acre fertilized, pounds	989

Coffee is a commercial crop only in Hawaii. The following data summarizes the use of fertilizer on coffee in 1959:

Percent of farms with coffee reporting use of fertilizer	89.5
Acres fertilized, total	7,716
Percent of acres in coffee	99.5
Tons of fertilizer used, total	4,174
Average per acre fertilized, pounds	1,082

CHANGE IN THE USE OF FERTILIZER

Data are available for the quantity of fertilizer used in the conterminous United States for only 1959, 1954, 1940, and 1930 censuses.

Census year	Tons of fertilizer used		
	Total	Increase over preceding census	
		Tons	Percent
1959	19,603,104	649,744	3.4
1954	18,953,360	11,949,534	170.6
1939	7,003,826	−531,196	−7.0
1929	7,535,022	NA	NA

There has been a large increase in the proportion of farms using fertilizer. Since 1940, the quantity of fertilizer used has doubled.

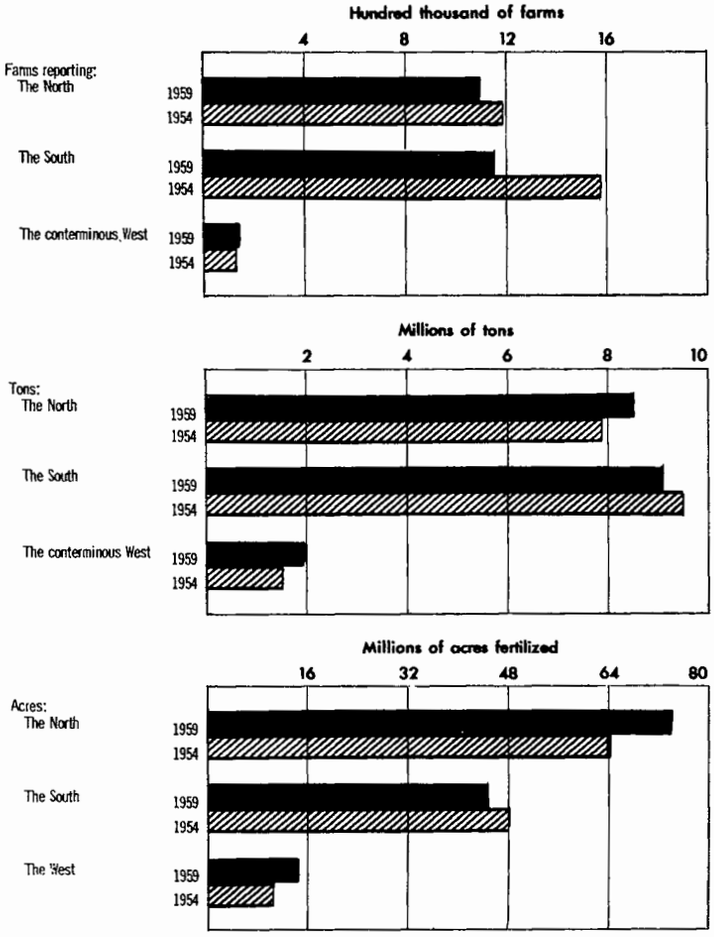
Figures on the number of farms using or purchasing commercial fertilizer and fertilizing materials are available for a long period for the conterminous United States.

Census year	Farms reporting fertilizer used or purchased		
	Total	Increase over preceding census	
		Number of farms	Percent
1959	2,374,015	−542,391	−18.6
1954	2,916,406	336,135	13.0
1944	2,580,271	243,240	10.4
1939	2,337,031	12,941	0.6
1929	2,324,090	140,034	6.4
1924	2,184,056	−87,123	−3.8
1919	2,271,179	448,147	24.6
1909	1,823,032	NA	NA

While the number of farms reporting the use of fertilizer declined from 2,916,000 in 1954, to 2,374,000 in 1959, for the conterminous United States, the proportion of the farms reporting fertilizer increased from 61.0 in 1954, to 64.1 in 1959. Most of the decrease in the number of farms reporting fertilizer occurred in the South where the decline in the number of farms from 1954 to 1959 was relatively large.

Use of Fertilizer and Fertilizing Materials by Crops.—For 1959 and 1954, data are available by crops for the 48 States for only hay and cropland pasture and other pasture (not cropland).

COMMERCIAL FERTILIZER: FARMS REPORTING, TONS, AND ACRES FERTILIZED, BY REGIONS: 1959 AND 1954



For the other crops fertilized data are not available for all States for 1959 and 1954. The proportion of the total acreage for the United States of each crop in the States for which data on the use of fertilizer on that crop were obtained was as follows:

Crop	Percent	
	1959	1954
Barley	22.7	
Coffee (Hawaii only)	100.0	
Corn	99.1	99.4
Cotton	93.4	93.5
Irish potatoes	79.4	
Oats	5.0	24.6
Pineapples (Hawaii only)	100.0	
Rice		19.0
Sorghums	71.4	
Soybeans	86.2	
Sugar beets	73.4	37.2
Sugarcane	39.7	
Tobacco	75.3	75.8
Wheat	83.9	75.5

The acreage of other pasture (not cropland) fertilized was 4 percent greater in 1959 than in 1954. However, the quantity of fertilizer used on other pasture was 15 percent greater in 1959 than in 1954, as the quantity used per acre was greater in 1959 than in 1954 in most States.

The increase in the acreage of corn fertilized from 1954 to 1959 accounted for almost half of the increase in the acreage of all crops fertilized. The increase from 1954 to 1959 in the quantity of fertilizer used for corn amounted to more than 742,000 tons.

In the 21 States for which the figures for wheat fertilized were obtained in both 1959 and 1954, the acreage for wheat fertilized increased almost 4 million acres. The increase in the acreage of wheat fertilized in those 21 States accounted for about two-fifths of the increase in acreage for all crops fertilized from 1954 to 1959.

The acreage of hay and cropland pasture fertilized was about the same in 1959 as in 1954. The quantity of fertilizer used was about 10 percent greater in 1959 than in 1954 because of an increase of approximately 10 percent in the average amount used per acre.

The decreases in the acreage of tobacco fertilized and the tons of fertilizer used on tobacco from 1954 to 1959 were the result of the decrease in the acreage of tobacco harvested. The quantity of fertilizer used per acre of tobacco fertilized was about 20 percent greater in 1959 than in 1954.

Use of Lime and Liming Materials.—In 1959, about one out of eight farms reported the use of lime and liming materials. The use of lime is concentrated largely in the Northern States and the South Atlantic States. While the number of farms reporting the use of lime was fewer in 1959 than in 1954, the proportion of farms reporting the use of lime increased from 10.9 to 12.3 percent for the 48 States.

The following summary indicates the data covering lime and liming materials obtained for 1959 and prior censuses.

Census of—	Kind of data obtained
1959	Tons of lime and liming materials and acres limed in 1959. Ground limestone, hydrated and burnt lime, marl, oyster shells, etc., to be included. Lime used for sprays or sanitation to be omitted. Lime furnished under the Agriculture Conservation Program to be included.
1954[1]	Lime or liming materials purchased in 1954 (tons and cost) and acres limed. Ground limestone, hydrated and burnt lime, marl, oyster shells, etc., to be included. Lime used for sprays or sanitation to be omitted. Lime furnished under the Agriculture Conservation Program to be included.
1945[1]	Cost of lime or liming materials purchased in 1944. Ground limestone, hydrated and burnt lime, marl, oyster shells, etc., to be included. Lime used for sprays or sanitation to be omitted. Lime furnished under the Agriculture Conservation Program to be included.
1940[1]	Tons and cost of liming materials—lime, marl, gypsum, etc., bought in 1939.
1930[1]	Amount expended in 1929 for commercial fertilizer, manure, marl, lime, and ground limestone. (No separate data for liming materials.)
1925[1]	Amount expended in 1924 for manure and fertilizer, including lime and ground limestone. (No separate data for liming materials.)

[1] Alaska and Hawaii not included.

The tons of lime and liming materials used in 1959 were 11.1 percent greater than in 1954, while the acreage limed was 2.9 percent less in 1959 than in 1954. The average amount of lime and liming materials used per acre was 3,760 pounds in 1959, or 14.3 percent greater than in 1954 in the conterminous United States. The increase from 1954 to 1959 in the tons of lime and liming materials used was the result largely of the increase in the Southern States.

Significant increases have occurred during the last two decades in the number of farms reporting and the quantity of lime and liming materials used in the conterminous United States.

Census year	Farms reporting		Tons of lime and liming materials used	
	Number of farms	Percent increase over preceding census	Total	Percent increase over preceding census
1959	453,954	−12.8	19,161,340	11.1
1954	520,445	−35.8	17,276,170	[1] 102.9
1944	811,222	71.9	NA	NA
1939	471,807	NA	8,516,107	NA

[1] Percent increase over 1939.

NA Not available. Z Less than 0.05 percent. [1]Ratio of acres fertilized to the total acreage of crops (or pasture) in each respective group. See text for limitations of this percentage. [2]Data are for 39 States. These 39 States accounted for 99.1 percent of the total acreage of corn harvested for all purposes in 1959. [3]Data are for 4 States (Arizona, Kansas, New Mexico, and Texas). These 4 States accounted for 71.4 percent of the total acreage of sorghums harvested in 1959. [4]Data are for 26 States. These 26 States accounted for 83.9 percent of the total acreage of wheat harvested in 1959. [5]30 counties in Southeastern Missouri not included. [6]Data are for 14 States. These 14 States accounted for 86.2 percent of the total acreage of soybeans harvested for all purposes in 1959. [7]Data are for 12 States. These 12 States accounted for 93.4 percent of the total acreage of cotton harvested in 1959. [8]Data are for 6 States. These 6 States accounted for 75.3 percent of the total acreage of tobacco harvested in 1959. [9]Data are for 23 States. These 23 States accounted for 79.4 percent of the total acreage of Irish potatoes harvested in 1959. [10]Data are for 9 States. These 9 States accounted for 73.4 percent of the total acreage of sugar beets harvested in 1959. [11]Data are for 5 States (Maine, Nebraska, New Hampshire, Rhode Island, and Vermont). These 5 States accounted for 5 percent of the total acreage of oats harvested for grain in 1959. [12]Data are for 7 States. These 7 States accounted for 22.6 percent of the total acreage of barley harvested in 1959. [13]Includes all crops other than those for which fertilizer data are listed for each State.

Part 3.—FARM EXPENDITURES

Introduction.—In each of 14 censuses since 1870, except for the 1935 census, data have been obtained for the amount expended for selected items for farm expenses. In the last three censuses of agriculture (1959, 1954, and 1950), information for selected items for farm expenses was obtained for a sample of approximately 20 percent of farms. For the last four censuses the data in this chapter represent estimates based upon reports obtained for a sample of farms. For 1959 and 1954, expenditures relate to calendar years 1959 and 1954, respectively, and for earlier censuses, expenditures cover the calendar year prior to the decennial or quinquennial census.

Other Published Data.—Data for selected farm expenditures enumerated in the 1959 Census of Agriculture, in addition to those published in this volume, are located as indicated in the following table.

OTHER PUBLISHED DATA FOR FARM EXPENDITURES: 1959 CENSUS OF AGRICULTURE

[For the conterminous States, all data for 1959, 1954, and 1949, and a part of the data for 1944 are estimates based on reports for only a sample of farms. See text]

Where found	Geographic area for which available	Period	Presentation of data
Volume I.—Counties and States, parts 1 to 50	Counties and States	1959 and 1954	County table 7.—County totals for specified farm expenditures for 1959 with comparative data for 1954.
		1959	County table 4.—County totals for specified farm expenditures for commercial farms for 1959.
	State only	1920 to 1959	State table 5.—State totals for specified farm expenditures for 1959 with comparative data for earlier censuses to 1920.
		1959	State tables 17 to 21.—State totals for specified farm expenditures for 1959 by class of farm, by type and class, by type, by size, by tenure of operator, and, for the Southern States, by tenure and color of operator.
Volume II.—General Report, Chapter V	United States only	1959	Size of farm.—United States totals for specified farm expenditures for 1959, by size of farm.
Volume II.—General Report, Chapter X	States, divisions, and United States	1959	Tenure of operator.—United States, division, and State totals for specified expenditures for 1959, by tenure of operator.
Volume II.—General Report, Chapter XI	States, divisions, and United States	1959	Class of farm.—United States, division, and State totals for specified expenditures for 1959, by economic class of farm.
Volume II.—General Report, Chapter XII	States, divisions, and United States	1959	Type of farm.—United States, division, and State totals for specified expenditures for 1959, by type of farm.

DEFINITIONS AND EXPLANATIONS

For definitions of such items as a farm, farms reporting, commercial farms, and other farms, reference should be made to the Introduction to this volume. The expenditure items included in the census for the conterminous States in 1959 include feed for livestock and poultry; machine hire; hired labor; seeds, bulbs, plants, and trees; gasoline and other petroleum fuel and oil for the farm business; and the purchase of livestock and poultry. In Alaska and Hawaii, the census included, in addition, the expenditures for the purchase of commercial fertilizer; the cost of land clearing, breaking, and draining for Alaska; and the cost of lime and insecticides and fungicides purchases for Hawaii.

The data presented in this chapter for the 1959, 1954, and 1950 Censuses of Agriculture represent estimates based upon the tabulation of data for a sample of approximately 20 percent of the farms. For description of the sample and sampling procedure, see page XVIII and for measures of sampling errors of the estimates, see tables 4 and 5 in the Introduction to this volume.

The expenditures were for the calendar year and were to be reported for each farm whether incurred by the operator or the landlord. For a farm operator who also rented land to others, only expenditures for the land he operated were to be reported.

No data were obtained on many items of farm expenditures. Information for such items as tractor and machinery repair, building repair, building materials, fertilizer, lime, purchase of farm implements and machinery, electric power, interest, insurance, etc., was not obtained in the census. Therefore, the sum of the selected items for expenditures reported does not represent a total of all farm expenditures for farm production.

For tenant-operated farms, the expenditures reported were to include the amounts spent by both the tenant and the landlord. In some cases, tenants may not have reported the landlord's share of expenditures, and landlords who operated their own farms may have reported expenditures made for their entire holdings including the land they rented to tenants.

Data for expenditures for earlier censuses are presented only for items included in the 1959 census. Expenditures for various items have been obtained at each census of agriculture, beginning with 1870. The items of expenditure which have been included in one or more censuses of agriculture are given below. Two items (fertilizer and lime) included in the 1954 census were not included in the 1959 census. They were replaced on the 1959 questionnaire by inquiries on the purchase of livestock and poultry, and expenditures for seeds, bulbs, plants, and trees.

FARM EXPENDITURE INQUIRIES APPEARING ON AGRICULTURE QUESTIONNAIRES: 1870 TO 1959

[An X in a column indicates the inquiry appeared on the questionnaire]

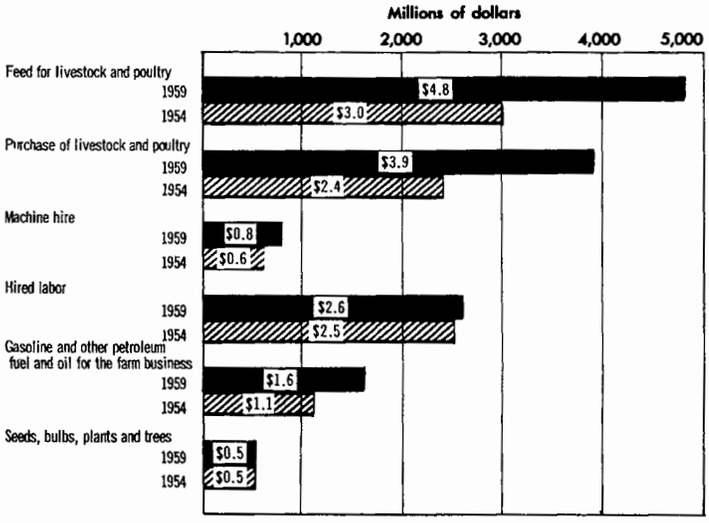
[1] No inquiries for Alaska and Hawaii for any items.
[2] No inquiry for Alaska.
[3] No inquiry for Hawaii.
[4] No inquiry for Alaska or Hawaii.
[5] Inquiry for Alaska and Hawaii only.
[6] Inquiry for Hawaii only.
[7] Inquiry for Alaska only.

With the exception of hired labor, there have been only minor changes from one census to another in the wording of the inquiries for the various items of farm expenditures included in the census. For hired labor, expenditures for 1900 and the three prior censuses include the value of board furnished to hired workers.

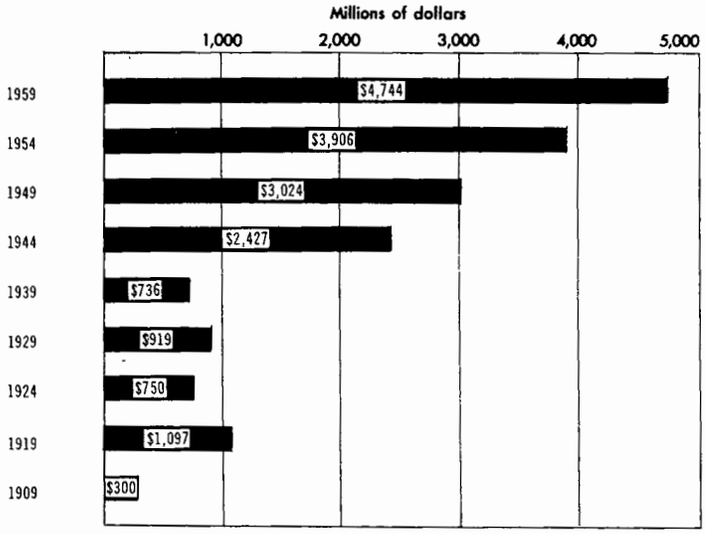
SELECTED FARM EXPENDITURES: 1959 AND 1949



Expenditures for feed for livestock and poultry include payments for pasture, salt, condiments, concentrates, and mineral supplements as well as for grain, hay, and mill feeds made either by the farm operator or by his landlords, or by contractors where livestock or poultry were fed under contract. The amount spent for grinding and mixing feed was also to be included. Payments made by a tenant to his landlord for feed grown on the place were not to be included.

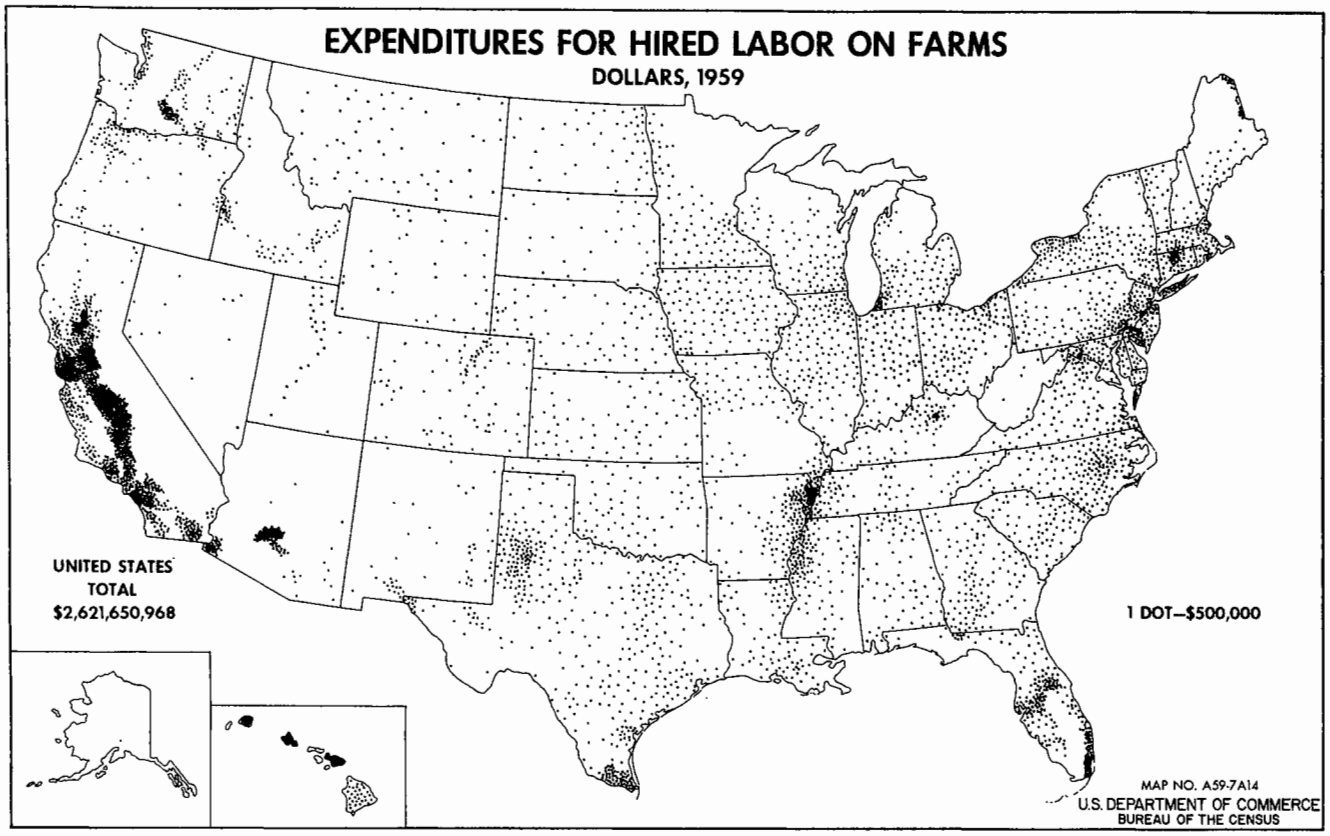
The purchase of livestock and poultry includes all kinds of livestock and poultry purchased. Livestock purchases were to include the cost of livestock fed under a contract arrangement except when the livestock were fed less than 30 days. Poultry purchases were to include baby and broiler chicks and turkey poults, whether purchased by the operator or by others under a contract arrangement. The farm operator raising broilers under contract was asked to estimate the value of chicks purchased by the person with whom he had a contract.

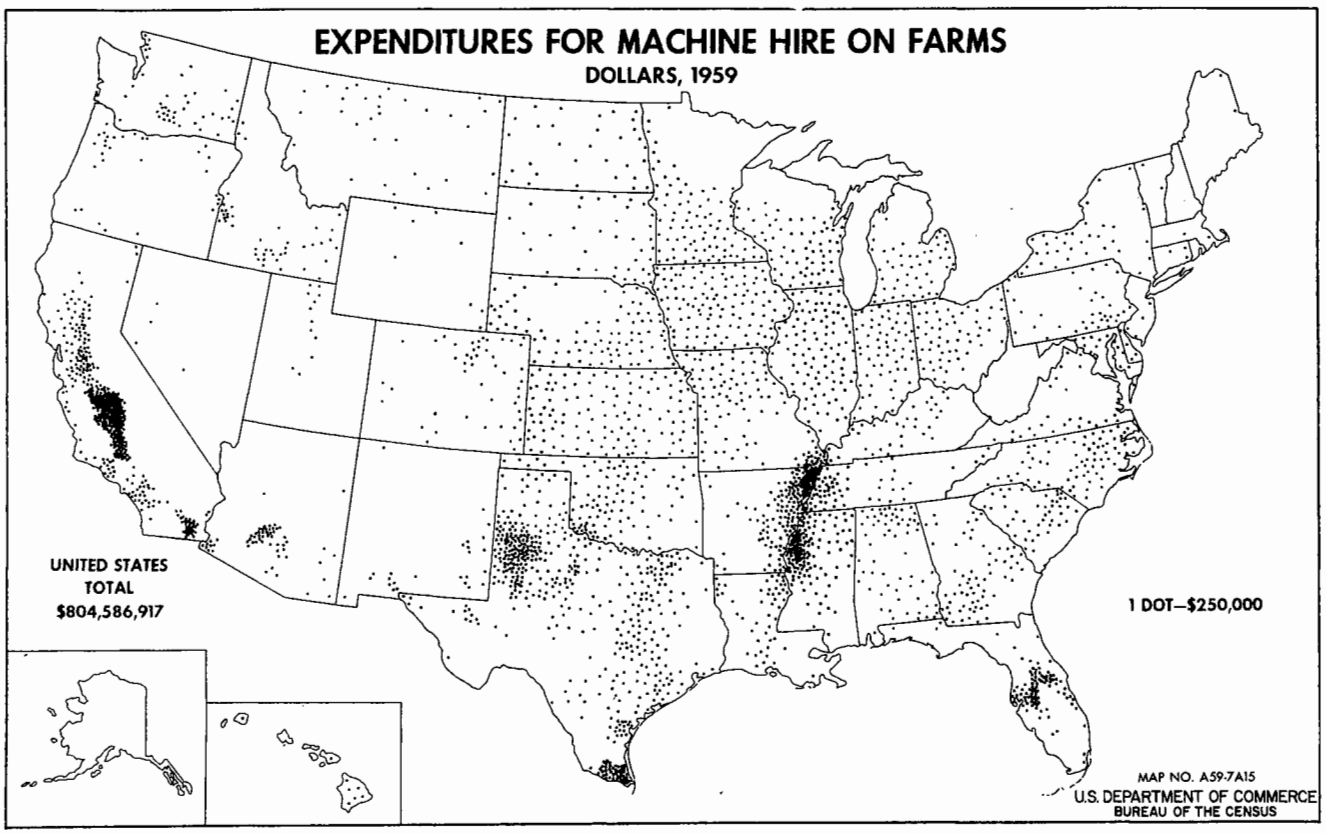
EXPENDITURES FOR FEED FOR LIVESTOCK AND POULTRY: 1909 TO 1959



The expenditures for hired labor include only cash expenditures. The cost of perquisites furnished hired labor, such as room, board, house, milk, meat, or other farm produced products were not to be included. Payments for housework, contract construction work, and labor connected with custom machine work were to be excluded.

Information on expenditures for hired labor has been obtained in the conterminous States for every census since 1870, except 1935, and in Alaska and Hawaii for every decennial census since 1920. From 1870 to 1900, expenditures referred to the amount paid for farm labor, including the value of board furnished. For 1910 and 1920, separate figures were obtained for cash expenditures and for the estimated value of rent and board furnished farm laborers. In the censuses of 1959, 1954, 1950, 1945, 1940, 1930, and 1925, there was only one inquiry to obtain the cash expended for farm labor. Beginning with 1900, the inquiry in each census has excluded housework. Contract construction work and





expenditures for machine hire and for labor included in the cost of such machine hire were excluded for 1959, 1954, 1950, 1945, and 1940.

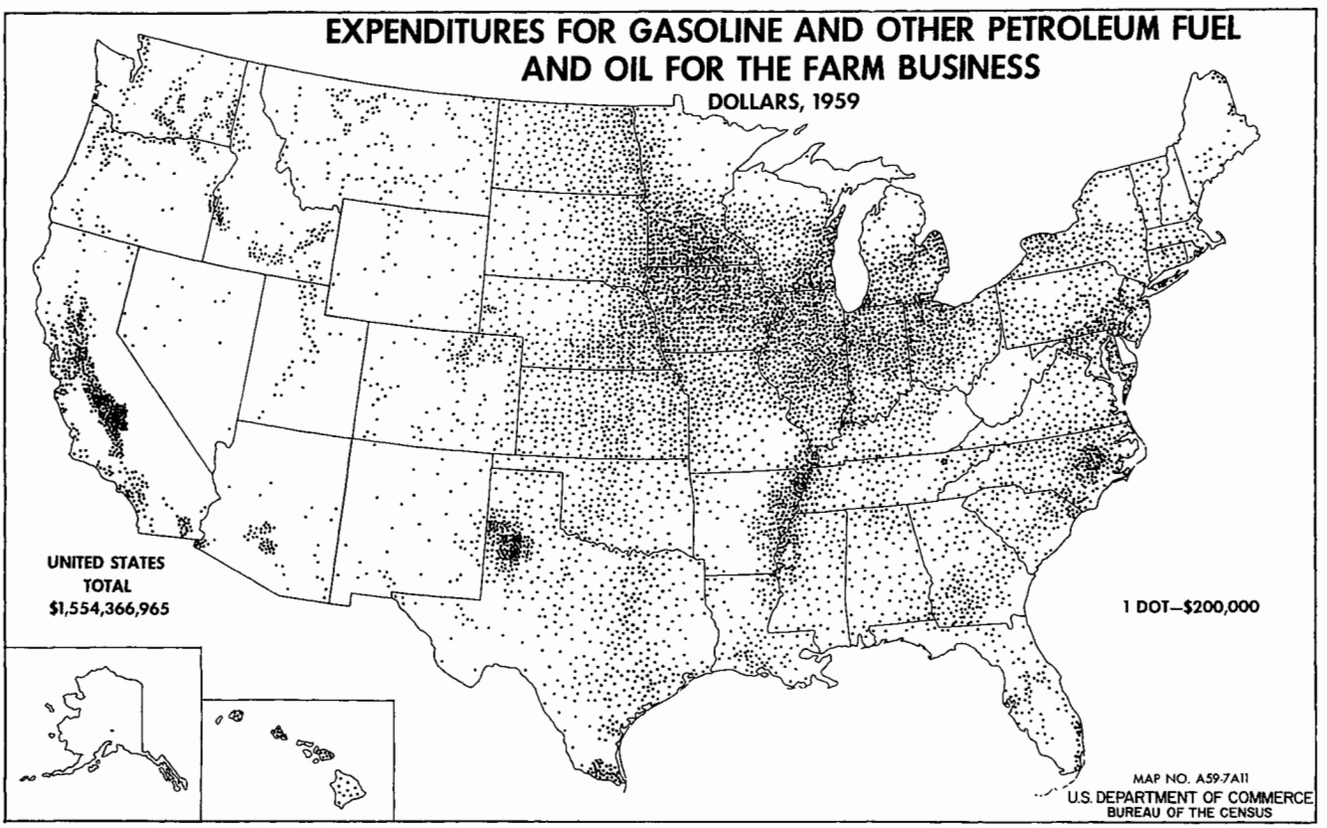
Specific mention of the inclusion of expenditures for contract and piecework labor was made in the 1940, 1945, 1954, and 1959 census inquiries. The questionnaires and instructions for 1950 did not specifically require the inclusion of expenditures for contract and piecework labor. However, it did provide for reporting the number of hired farm workers that were paid on a piece-rate basis.

Machine hire refers to custom farm work, such as tractor hire, combining, cotton ginning, silo filling, plowing, spraying, fruit picking, etc. Expenditures for machine hire were to include the cost of labor as well as the cost for machines used by the labor. Expenditures for hauling, trucking, freight, etc., were not to be included.

The inquiry regarding expenditures for seeds, bulbs, plants, and trees has been included only in the 1945, 1950, and 1959 censuses of agriculture. The expenditures do not include the value or cost of seeds or plants produced on the farm nor of florist and nursey products purchased for resale, without further growth.

For expenditures for gasoline and other petroleum fuel and oil the instructions to enumerators specified the inclusion of gasoline, butane, propane, LP gas, kerosene, fuel oil, lubrication oil, grease, and other petroleum fuel and oil used in the farm business. The cost of oil or other petroleum fuel used for curing tobacco, heating poultry houses or other farm buildings, or used in the family automobile for farm business was also to be included.

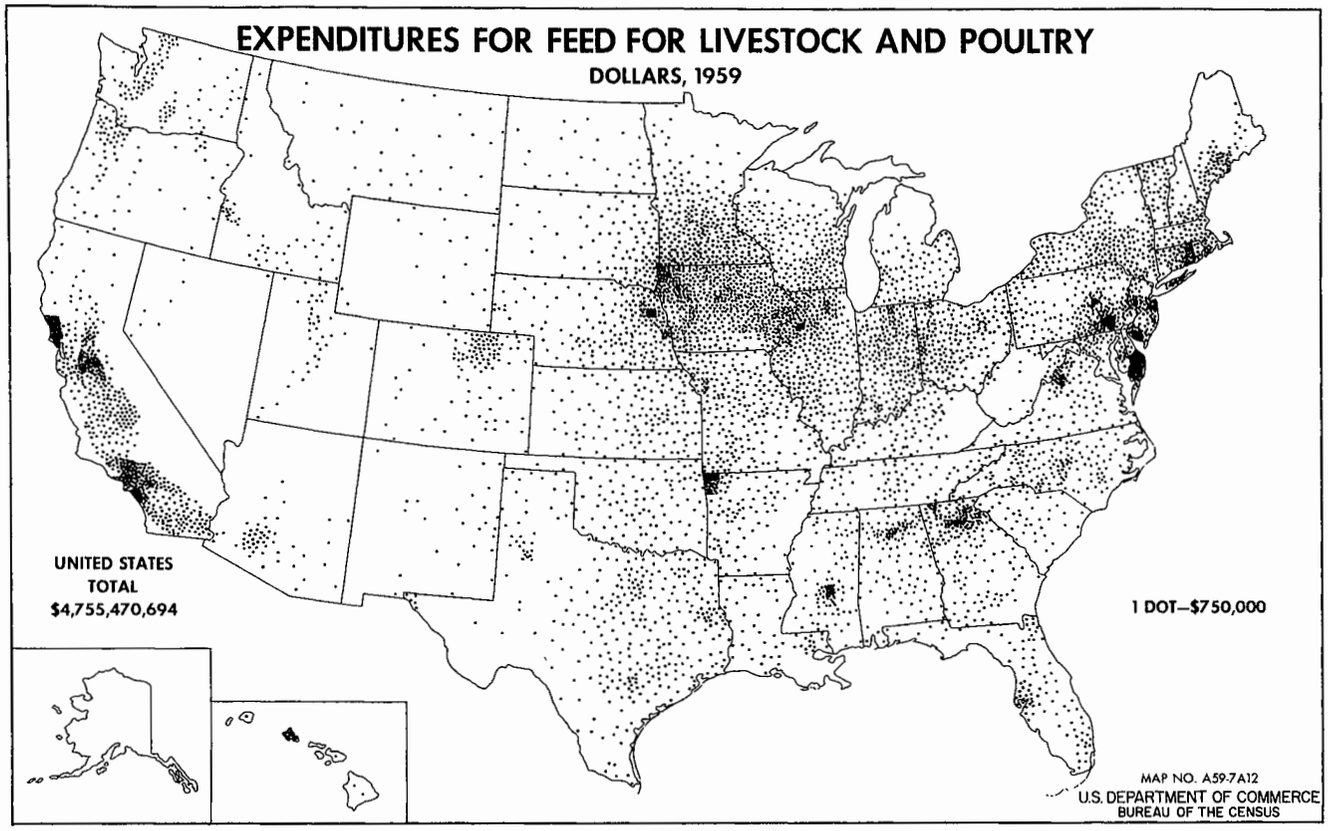
Questions on petroleum fuel have appeared on census questionnaires in 1940 and subsequent census years (except 1945) for the 48 conterminous States; in the 1950 and 1959 censuses in Hawaii; and the 1959 census in Alaska.



Selected Farm Expenditures, 1959.—In 1959, one or more of the six items for farm expenditures was reported by 99 percent of all the 3.7 million farms in the United States. The total of the six items for farm expenditures was over $14 billion and represented 46.2 percent of the value of all farm products sold in 1959. These six items of farm expenditures account for approximately two-thirds of the cash farm operating expenditures for farm operators in the United States. There are many significant items of expense not included in this total, such as expenditures for fertilizer, lime, interest, taxes, containers, cash rent, etc. The six items for farm expense averaged almost $3,800 per farm for all farms, and over $5,500 per farm for commercial farms.

Expenditures were larger for feed than for any other of the six items. In importance, measured by dollars, the expenditures for the purchase of livestock and poultry and the expenditures for hired labor were the next two most important items of farm expenditure.

While one or more of the six items of cash expenditures was reported for nearly all farms, most items of expenditure were reported for only a part of the farms. The expenditures for gasoline and oil and other petroleum fuel and oil for the farm business were reported for 93 out of 100 of all farms and 97 out of 100 commercial farms. There were some farms for which all the farm work was hired on a contract basis and there were some farms on which gasoline operated machinery was not required or not used. Feed for livestock and poultry was reported for more than three-fourths of the farms, and hired farm labor by less than half of the farms. The amount of expenditures on a large proportion of the farms reporting an item of expenditure is relatively small. For example, for almost one-fifth of the farms reporting the purchase of feed, the expenditure was less than $100; for almost three-fifths of the farms with expenditure for machine hire, the expenditure was less than $200; for nearly two-thirds of the farms with expenditures for hired labor, the expenditure was less than $500; and for one-third of the farms with expenditures for gasoline and other petroleum fuel and oil for the farm business, the expenditure was less than $100.



Changes in the Selected Farm Expenditures.—An increasing proportion of the farms is using purchased farm production inputs except hired labor. Most of these inputs come from nonfarm sources.

Table 17.—Farms Reporting and Percent of all Farms Reporting Selected Farm Expenditures for the Conterminous United States: 1869 to 1959

Items and census year		Farms reporting	
		Total	Percent of all farms
Hired labor	1959	1,782,735	48.2
	1954	2,220,688	46.4
	1949	2,670,043	49.6
	1944	2,799,026	47.8
	1939	2,260,237	37.1
	1929	2,631,601	41.8
	1924	2,536,721	39.8
	1919	2,888,999	44.8
	1909	2,922,279	45.9
Machine hire	1959	1,989,284	53.7
	1954	2,545,128	53.2
	1949	2,757,864	51.3
Feed for livestock and poultry	1959	2,840,070	76.7
	1954	3,652,899	76.4
	1949	3,875,704	72.0
	1944	4,271,642	72.9
	1939	3,342,715	54.8
	1929	3,283,400	52.2
	1924	3,190,739	50.1
	1919	3,511,121	54.4
	1909	2,368,905	37.2
Gasoline and other petroleum fuel and oil for the farm business	1959	3,457,807	93.4
	1954	3,267,865	68.3
	1949	2,983,476	55.5
	1939	2,886,614	47.3

The number of farms reporting expenditures for farm labor has been declining and there has been a large decrease in the number of farms with expenditures of less than $1,000 for hired labor. Notwithstanding the decrease in the number of farms, the number of farms reporting an expenditure of $2,500 or more increased 14.3 percent from 1954 to 1959.

Table 18.—Farms by Amount of Cash Expenditures for Hired Labor, for the United States: 1959, 1954, and 1944

[Data for the conterminous States are based on reports for only a sample of farms. See text]

There have been significant changes in the relative importance of various inputs during the last few decades. There have been significant decreases in the relative importance of labor to land and buildings.

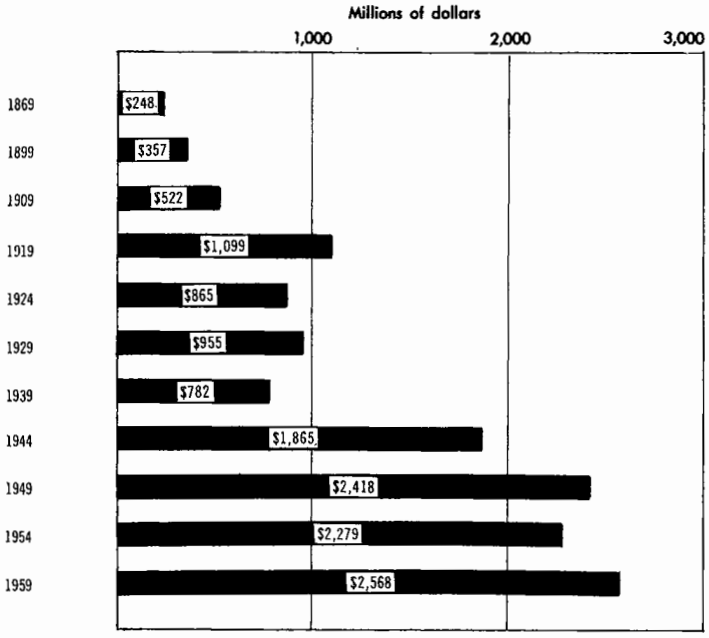
EXPENDITURES FOR HIRED LABOR: 1869 TO 1959



The changes in the amount of expenditures from census to census reflect changes in price level as well as actual changes. The following table provides figures on the amount of expenditures reported in the census and the amount of those expenditures adjusted to 1959 price level by the use of the U.S. Department of Agriculture index numbers of prices paid by farmers for these items. The figures at constant (1959) prices indicate more accurately the change in amounts of farm expenditures than do the figures reported at current prices in the census.

Table 20.—Index Numbers of Prices Paid by Farmers for Specified Commodities Bought for Use in Production, and of Farm Wage Rates, for the United States: 1910 to 1959

[Calendar years 1910–1914=100]

Table 27.—PERCENT DISTRIBUTION OF FARMS REPORTING CASH EXPENDITURES FOR LABOR BY AMOUNT EXPENDED, BY DIVISIONS AND STATES: 1959, 1954, AND 1949

[Figures based on data shown in Table 26. Data for the conterminous United States are based on reports for only a sample of farms. See text]

	Region, division, and State	Percent distribution of all farms reporting by amount of cash expended																			
		$1 to $199			$200 to $499			$500 to $999			$1,000 to $2,499			$2,500 to $4,999		$5,000 to $9,999		$10,000 to $19,999		$20,000 or more

Part 4.—CASH RENT

Introduction.—This part of chapter IV presents statistics on cash rent with related information on number of farms and value of land and buildings for cash tenants and share-cash tenants for commercial farms and other farms.

Presentation of Statistics.—The statistics are presented as totals for the conterminous United States, the major geographic areas, and for each of the 48 States. Data on cash rent for Alaska and value of land and buildings for Hawaii are not available. Most of the data presented in this part represent estimates based on reports for only a sample of farms.

DEFINITIONS AND EXPLANATIONS

Only definitions of particular significance in regard to cash rent are given. For definitions and explanations of items of general application, refer to the Introduction to this volume. For a more detailed discussion of the classification of farms by tenure of the operator, see chapter X.

Farm Operator.—A farm operator is a person who operates a farm either performing the labor himself or directly supervising it. He may be an owner, a hired manager, or a tenant. If he rents land to others or has land cropped for him by others, he is the operator of only the acreage which he retains. The number of farm operators is considered the same as the number of farms.

Land in Farms.—For the 1959, 1954, and 1950 censuses, the land to be included in each farm was determined on the basis of the inquiries regarding the number of acres owned, the acres rented from others or worked on shares for others, and the acres rented to or worked on shares by others. In case of a managed farm, the acres rented to others, if any, were subtracted from the total acres managed. In censuses prior to 1950 the acreage in each farm was determined by asking directly the acreage in the farm. Enumerators and farm operators were instructed to include any land rented from others and to exclude any land rented to others.

Owners.—Farm operators who own land they operate are classified as owners.

Full owners are farm operators who own all the land they operate.

Part owners are farm operators who operate owned land and also operate land rented from others.

Tenants.—Tenants are farm operators who rent from others or work on shares for others all the land they operate.

Cash tenants pay cash and cash only as rent, and in the Southern States, are not furnished work power by their landlords.

Share-cash tenants pay cash in addition to a share of the crops and/or livestock.

For census years other than 1950, the tenure of tenant-operators was determined on the basis of land operated; in 1950 tenure was determined on the basis of all land owned or all land rented from others. Thus, for 1950, tenants by definition included no operators who owned land. For that census all operators who owned land were classed as owners regardless of whether they operated the land owned or rented it to others. For 1954, 1940, and 1930, tenants by definition operated rented land only.

Value of Land and Buildings.—The value of land and buildings to be reported was the approximate amount for which the land and the buildings on it would sell. The value of land and buildings was asked for a sample of approximately 20 percent of the farms; however, it was not reported for all the farms included in this sample. (See page 5 in chapter I for a discussion of the characteristics of estimates for the value of land and buildings.)

Inquiries on Cash Rent.—The arrangement under which land was rented from others was determined from the following inquiries which were asked of a sample of approximately 20 percent of the farm operators who rented land from others:

308(a) Do you rent any land from others? . . . . . No ☐ Yes ☐

(b) Do you work any land on shares? . . . . . No ☐ Yes ☐

(If "No" for both questions **308(a)** *and* **308(b)**, *mark* **X** *and skip to question* **[314].**)
(If "Yes" for either question **308(a)** *or* **308(b)**, *answer questions* **309** *through* **313.**)

309. Does the landlord furnish all the work animals or tractor power (as a part of his share of the operation of the place)? . . . . . No ☐ Yes ☐

310. Do you pay to your landlord any cash as rent? . . . . . No ☐ Yes ☐

(a) If "Yes," how much for the year? . . . . . $_____/00

311. Do you pay to your landlord any share of the crops (such as ¼, ½, ¾)? . . . . . No ☐ Yes ☐

312. Do you pay to your landlord any share of the livestock or livestock products (such as ¼, ½, ¾)? . . . . . No ☐ Yes ☐

313. Do you have this land under any other arrangement (such as a fixed quantity of any product, upkeep of land and buildings, payment of taxes, keep of landlord, rent free, etc.)? . . . . . No ☐ Yes ☐

The enumerator was instructed to include only the amount of rent paid or payable in cash. If a fixed quantity of any product was paid or to be paid as rent, the value of the product was not to be included.

The average cash rent per acre varies from State to State. These variations arise in part from the rental of farms for largely residential purposes, the inclusion of waste and other land in farms operated, and the variation in the quality and value of land and buildings operated by cash tenants, etc. Variations in the cash rent per $100 of value arise, in part, because of differences in the level of return on investments; in taxes; in farm improvements, since the rental usually takes into account depreciation or upkeep of such improvements; and to differences in the value of farm land and buildings because of location, presence of minerals, etc.

History of Census Data on Cash Rent Paid.—The amount of cash rent paid by cash tenants is available for four prior censuses—1954, 1950, 1940, and 1930. The data for 1959, 1954, and 1950 are limited to those cash tenants who reported the amount of rent paid or payable. The data for 1940 and 1930 relate only to the land operated. Land subrented to others was not included.

Census Data on Cash Rent.—The data given for cash rent apply only to cash tenants and share-cash tenants for whom both the amount of cash rent and the value of land and buildings were reported. The data therefore do not represent totals for all farms operated by cash tenants and by share-cash tenants. The proportion of the farms for which the value of land and buildings and the amount of cash rent were reported was 79.8 percent for 1959, as compared with 63.5 percent in 1954, 68

percent in 1950, 94.4 percent in 1940, and 99.3 percent in 1930. The proportion of land in farms for all cash tenants for which both the value of land and buildings and the amount of cash rent were reported was 73.2 for 1959, 64.8 for 1954, 67.6 for 1950, 93.6 for 1940, and 98.6 for 1930.

The tables show the number of operators reporting; the total acres rented from others; the value of the rented land (land and buildings); and the amount of cash rent paid per operator, per acre, and per $100 of value of land and buildings. The data do not include cash rent paid by those cash or share-cash tenants for whom either the value of the rented land and buildings or the amount of cash rent was not reported.

The land rented from others includes not only the land operated, but also the rented land which was subrented to others. Of the 105,194 cash tenants in 1959, only 5,719, or 5.4 percent, subrented land to others. Of the 132,506 share-cash tenants, 5,096, or 3.8 percent, subrented land to others. The subrented land represented 3.7 percent of the total land rented from others by cash tenants, and 1.8 percent of the land rented by share-cash tenants.

The presentation of cash-rent data separately for commercial and other farms (part-time, part-retirement, and abnormal) separates to a large degree farms rented primarily for nonfarm purposes, such as a residence, from those rented for farming purposes. "Other farms" include many places having sufficient agricultural operations to qualify as farms, and occupied primarily as residences, often by persons with nonfarm employment or nonfarm sources of income.

Since 1940, when there were 514,438 cash tenants, there has been a decrease in the number of cash tenants for each succeeding census. In 1959 there were 105,194, a decrease of 80 percent since 1940.

Although land in farms operated by cash tenants decreased by approximately 3 million acres from 1954 to 1959, the average size of these farms increased from 231 acres per farm to 323 acres.

The average value of land and buildings per farm and per acre for cash-tenant farms in 1959 was slightly less than similar averages for all farms. These average values of land and buildings per farm for cash tenants have increased from approximately $12,000 in 1950, to $33,000 in 1959, and the average value of land and buildings per acre increased from less than $61 in 1950, to $109 in 1959.

Cash rent paid per cash tenant and per acre have also increased since 1950, but there was a decrease in the amount of cash rent per $100 value of land and buildings. Average cash rent per cash tenant was $575 in 1950, $783 in 1954, and $1,147 in 1959; average cash rent per acre of land in farms was $2.88, $3.26, and $3.82, respectively, for 1950, 1954, and 1959. Average value of cash rent per $100 value of land and buildings was $4.73, $4.43, and $3.47, for 1950, 1954, and 1959, respectively.

Data on the amount of cash rent paid by share-cash tenants are presented for the first time. The average paid per farm operator for this tenure group is roughly half of that paid by cash tenants. However, share-cash tenants pay a share of the crops and/or livestock in addition to the cash rent.

Table 28.—LAND IN FARMS, VALUE OF LAND AND BUILDINGS, AND CASH RENT PAID, BY CASH TENANTS, 1930 TO 1959; AND BY SHARE-CASH TENANTS, 1959; FOR THE CONTERMINOUS UNITED STATES

[All 1959, 1954, and 1950 data are based on reports for only a sample of farms. See text]

NA Not available. [1]For 1950, tenants by definition included no operators who owned land. For that Census, all operators who owned any land were classed as owners. For 1959, 1954, 1940, and 1930, tenants by definition operated rented land only. If any land was owned, all of it was rented to others. [2]Rented land subrented to others equals all land rented to others minus land owned. See text.
