Conversion factors.—Tables 2 and 13 presents the proportion of milk produced on the farm which enters commercial channels as whole milk and the proportion sold as cream. The difference between 100 percent and the sum of these two percentages gives a very rough approximation of the proportion

consumed on the farm as whole milk or cream, made into butter on the farm, fed to calves, waste, and net errors in conversion factors. The conversion factors used in determining the proportion of milk produced which was sold as cream follow:
