1 Prior to 1924 based on total acreage of crops. See table 4. 2 Based on value of all farm products sold, traded, or used by farm households the preceding year. Excludes value for 0.6 percent of farms for 1940 and 4.6 percent for 1930 for which data were incomplete. For 1940, there was an additional 1.5 percent for farms with no value of farm products. See chapter X. 3 Not available. 4 1935 averages based on farm population as obtained in the census of agriculture for that year.

1 The land area shown for 1940 represents a complete remeasurement and therefore differs from those shown for previous censuses. See text discussion. An increase of 1,280 acres from 1920 to 1925 resulted from reclamation of Potomac River flats in the District of Columbia; a decrease of 74,240 acres from 1910 to 1920 was due to losses of 29,440 acres in Wyoming caused by the building of the Pathfinder and Shoshone Reservoirs and 44,800 acres in Montana due to the building of several reservoirs for irrigation projects; a net decrease of 172,160 acres from 1900 to 1910 resulted from a loss in California of 281,600 acres due to the encroachment of the Salton Sea, a loss in Arizona of 19,200 acres due to the building of Roosevelt and Laguna Reservoirs, and gains due to drainage of lakes and swamps of 26,240 acres in Illinois and 102,400 acres in Indiana; an increase of 124,160 acres from 1880 to 1900 resulted from 122,880 acres in California added due to Tulare Lake being dry and 1,280 acres of Potomac River flats reclaimed in the District of Columbia; and an increase of 18,981,920 acres from 1850 to 1860 resulted from the Gadsden Purchase. Changes in the approximate land area of the individual States, other than those given above, were due for the most part to changes in boundaries occasioned by the organization of new States.
