*Not available.

¹Prior to 1924, the data relate to the total acreage of crops for which figures are available, except for 1919 when 14,502,932 acres of corn cut for forage were excluded (as most of this was probably duplicated in the acreage of corn harvested for grain).²Percentages for 1945 are based on land areas as shown in table 9. Percentages for earlier years are based on land areas as published in Census reports for those years. United States land areas, for earlier years, are shown in table 1. For 1850, the percentage for the United States was based on total land area, including 297,976,960 acres of unorganized territory omitted in the calculations for regions and States. See text discussion.

30.05 percent or less.

41,000 percent or more.

³Figures for 1880 were obtained by consolidating data for the counties which then occupied the area now known as North Dakota.⁴The 1870 and 1860 figures are for Dakota Territory.⁵Figures for 1880 were obtained by consolidating data for the counties which then occupied the area now known as South Dakota.⁶In 1860 and 1850, Virginia included the area now known as West Virginia.⁷Figures for 1900 are for Oklahoma Territory and Indian Territory.⁸The 1890 figures for number of farms, farm acreage, and value are for Oklahoma Territory alone, no data for these items being available for Indian Territory; the percent of total land area in farms is based on the total land area of Oklahoma Territory plus Indian Territory; acreage shown under cropland harvested includes 35,078 acres of cotton in Indian Territory estimated from a special survey.⁹There was no enumeration of farms in 1880 in what is now known as Oklahoma; the figure shown under cropland harvested consists of cotton acreage reported for Indian Territory by special agent.
