PREFACE

Volume III, *Special Reports*, comprises a group of special compilations and summaries of data from the 1954 Census of Agriculture and from related surveys. Part 3 of Volume III, "Alaska, Hawaii, Puerto Rico, District of Columbia, and United States Possessions," presents statistics relating to agricultural inventories and production for the specified areas. The source of these statistics and the method of obtaining and assembling the data are described in the Introductory discussion for the several sections of the report.

The report was prepared in conformity with the act of Congress (Title 13, United States Code) approved August 31, 1954, which includes provisions for the mid-decade Censuses of Agriculture for the continental United States.

The compilation of the statistics was supervised by Ray Hurley, Chief, Agriculture Division, and Warder B. Jenkins, Assistant Chief. The assembly and the preparation of the tables, and much of the analysis of this report, were done under the supervision of Joseph A. Correll.

September 1956

UNITED STATES CENSUS OF AGRICULTURE: 1954

REPORTS

Volume I.—Counties and State Economic Areas.—Statistics for counties include number of farms, acreage, value, and farm operators; farms by color and tenure of operator; facilities and equipment; use of commercial fertilizer; farm labor; farm expenditures; livestock and livestock products; specified crops harvested; farms classified by type of farm and by economic class; and value of products sold by source.

Data for State economic areas include farms and farm characteristics by tenure of operator, by type of farm, and by economic class. Volume I is published in 33 parts as follows:

Part	State or States	Part	State or States	Part	State or States
1	New England States: Maine. New Hampshire. Vermont. Massachusetts. Rhode Island. Connecticut.	8	West North Central: Minnesota. Iowa. Missouri.	21	East South Central—Continued Alabama.
		9		22	Mississippi.
		10			West South Central: Arkansas.
		11	North Dakota and South Dakota.	23	Louisiana.
		12	Nebraska.	24	Oklahoma.
2	Middle Atlantic States: New York. New Jersey. Pennsylvania.	13	Kansas.	25	Texas.
		14	South Atlantic: Delaware and Maryland.	26	Mountain: Montana.
		15	Virginia and West Virginia.	27	Idaho.
	East North Central: Ohio.	16	North Carolina and South Carolina.	28	Wyoming and Colorado.
3	Indiana.	17	Georgia.	29	New Mexico and Arizona.
4	Illinois.	18	Florida.	30	Utah and Nevada.
5	Michigan.		East South Central: Kentucky.	31	Pacific: Washington and Oregon.
6	Wisconsin.	19	Tennessee.	32	California.
7		20		33	

Volume II.—General Report.—Statistics by Subjects, United States Census of Agriculture, 1954. Summary data and analyses of the data for States, for Geographic Divisions, and for the United States by subjects as illustrated by the chapter titles listed below:

Chapter	Title	Chapter	Title
I	Farms and Land in Farms.	VII	Field Crops and Vegetables.
II	Age, Residence, Years on Farm, Work Off Farm.	VIII	Fruits and Nuts, Horticultural Specialties, Forest Products.
III	Farm Facilities, Farm Equipment.	IX	Value of Farm Products.
IV	Farm Labor, Use of Fertilizer, Farm Expenditures, and Cash Rent.	X	Color, Race, and Tenure of Farm Operator.
V	Size of Farm.	XI	Economic Class of Farm.
VI	Livestock and Livestock Products.	XII	Type of Farm.

Volume III.—Special Reports

- Part 1.—Multiple-unit Operations.**—This report will be similar to Part 2 of Volume V of the reports for the 1950 Census of Agriculture. It will present statistics for approximately 900 counties and State economic areas in 12 Southern States and Missouri for the number and characteristics of multiple-unit operations and farms in multiple units.
- Part 2.—Ranking Agricultural Counties.**—This special report will present statistics for selected items of inventory and agricultural production for the leading counties in the United States.
- Part 3.—Alaska, Hawaii, Puerto Rico, District of Columbia, and U. S. Possessions.**—These areas were not included in the 1954 Census of Agriculture. The available current data from various Government sources will be compiled and published in this report.
- Part 4.—Agriculture, 1954, a Graphic Summary.**—This report will present graphically some of the significant facts regarding agriculture and agricultural production as revealed by the 1954 Census of Agriculture.
- Part 5.—Farm-mortgage Debt.**—This will be a cooperative study by the Agricultural Research Service of the U. S. Department of Agriculture and the Bureau of the Census. It will present, by States, data based on the 1954 Census of Agriculture and a special mail survey to be conducted in January 1956, on the number of mortgaged farms; the amount of mortgage debt, and the amount of debt held by principal lending agencies.
- Part 6.—Irrigation in Humid Areas.**—This cooperative report by

the Agricultural Research Service of the U. S. Department of Agriculture and the Bureau of the Census will present data obtained by a mail survey of operators of irrigated farms in 28 States on the source of water, method of applying water, number of pumps used, acres of crops irrigated in 1954 and 1955, the number of times each crop was irrigated, and the cost of irrigation equipment and the irrigation system.

Part 7.—Popular Report of the 1954 Census of Agriculture.—This report is planned to be a general, easy-to-read publication for the general public on the status and broad characteristics of United States agriculture. It will seek to delineate such aspects of agriculture as the geographic distribution and differences by size of farm for such items as farm acreage, principal crops, and important kinds of livestock, farm facilities, farm equipment, use of fertilizer, soil conservation practices, farm tenure, and farm income.

Part 8.—Size of Operation by Type of Farm.—This will be a cooperative special report to be prepared in cooperation with the Agricultural Research Service of the U. S. Department of Agriculture. This report will contain data for 119 economic subregions (essentially general type-of-farming areas) showing the general characteristics for each type of farm by economic class. It will provide data for a current analysis of the differences that exist among groups of farms of the same type. It will furnish statistical basis for a realistic examination of production of such commodities as wheat, cotton, and dairy products in connection with actual or proposed governmental policies and programs.

ALASKA, HAWAII, PUERTO RICO, DISTRICT OF COLUMBIA, AND UNITED STATES POSSESSIONS

Introduction.—This publication brings together statistics relating to agricultural inventories and production for Alaska, Hawaii, Puerto Rico, District of Columbia, American Samoa, Guam, and the Virgin Islands. Wherever a choice was possible, the data for inventories represent the status near the close of 1954 while those for production are for the calendar year 1954. In this respect, they are complementary to the data gathered in the 1954 Census of Agriculture for the continental United States. Comparative data from earlier Censuses are presented for many of the items. In a few cases, pertinent data are given for an item for an earlier year when no data were available for 1954. This procedure was followed if the additional figures gave a more complete picture of the agriculture of the area.

This report was prepared in accordance with the act of Congress which provides for the mid-decade Censuses of agriculture for the United States mainland. That act states, in part:

“(a) The Secretary shall take, beginning in the month of October 1954, and in the same month of every tenth year thereafter, a census of agriculture. The census provided for by this section shall include each State, but, except as provided in subsection (b) of this section, shall not include the District of Columbia, Alaska, Hawaii, Puerto Rico, or such other areas or territory over which the United States exercises sovereignty or jurisdiction.

“(b) As to the areas excluded from the census provided for in subsection (a) of this section, the data available from various Government sources shall be included as an appendix to the report of such census.”

Source of data.—As just mentioned, the act of Congress, while excluding these specified areas from the 1954 Census of Agriculture, provided that the data available for these areas from various Government sources should be brought together and published. Therefore, early in 1955 a request was made by the Director of the Census to an official source—Experiment Station, Department of Agriculture, or Governor—to obtain all available data similar to those collected in previous periodic Censuses. As an example, the two significant paragraphs in the request made to

the Director of the Agricultural Experiment Station in Alaska are quoted verbatim:

“The act of Congress providing for the 1954 Census of Agriculture specifies that enumeration is to be conducted only in the continental United States, but that data available for Alaska and some other areas from ‘various government sources shall be included as an appendix to the report of such census.’

“Accordingly, we would like to receive from you any available data for Alaska similar to those collected for the periodic censuses of agriculture. We would appreciate it very much if you could provide for our report the available data for 1954 indicated in the enclosed tables for Alaska. We would also like to have a statement explaining how the data for 1954 were collected and compiled.”

The statistics shown in this volume were compiled from the responses to these letters and, in a limited degree, from other published reports of agriculture for these areas. A more detailed account of the source of data and how they were collected may be found in the introductory text for each area.

Presentation of statistics.—Each area, for which statistics are presented in this report, is treated as an entity. Its statistics are apart from those of other areas. There are no totals for all the areas as a group. For ease of reference, the areas have been arranged in alphabetical sequence.

In the case of Alaska and Guam data are presented for subdivisions of the area; both judicial divisions and geographic areas for Alaska, and municipalities for Guam. Percentages and averages have been utilized to make the information more useful.

Comparability of data.—The comparability of the data for an area is affected by the period of the year in which the enumeration or survey was made; the definition of a farm; and the number and the wording of the questions. The method used in obtaining agricultural information also has a direct bearing on the comparability of data. The most recent information was obtained partly by mail, partly by personal interview, and partly by estimation. Some information is presented regarding these factors in the discussion for each area.

7.—Value of agricultural production for home use and for sale, by geographic areas: 1954 and 1953.....	11

ALASKA

Judicial Divisions and Recording Districts

Introduction.—The most recent agricultural statistics for Alaska were furnished by the Alaska Agricultural Experiment Station and the Alaska Department of Agriculture, a cooperative effort by the two Territorial Agencies. In reply to the Bureau's letter for available statistics for Alaska, an official of the Agricultural Experiment Station replied to the effect that a series of publications on annual agricultural production for key items had been initiated in 1953.

The procedure for obtaining the statistics for 1954 and 1953 in Alaska encompassed a mailed questionnaire to all persons known to be engaged in any agriculture. About 25 percent of the reports are obtained in this manner. For those who did not reply, a personal visit was made to all commercial farmers and to as many others as time and personnel permitted. It is estimated that 98 percent of the commercial production and 90 percent of all production in Alaska is recorded by these two procedures. The final published figures were weighted by the judgment of produce inspectors and economists based on the nature of the replies received and the specialized knowledge these men had of marketings and supplies.

Two reports were furnished to the Census Bureau by these Territorial Agencies. Each was entitled, Agricultural Production—Alaska. One was designated as the 1953 report and the other as the 1954 report. The 1953 report covered the amount and value of agricultural production for the calendar year 1953 but contained a few livestock inventory items as of January 1, 1954. The 1954 report, in less detail, related to the year subsequent to the 1953 report. For publication, in this Census report it was decided to use the same time reference as was used in the publications received from Alaska. Since the 1953 Alaska report gives information in more detail than the 1954 report, data are given herein from both.

For 1953 the data for the Matanuska Valley, the Anchorage Area, and the Tanana Valley were based on personal interviews. These three geographic areas contributed nearly 80 percent of the total income from farm sales. Data for other areas were estimates based on returned mail questionnaires and other information. The number of contacts in each area upon which the data for 1953 were based is as follows:

Area	Number of contacts ¹
Alaska totals.....	353 reporting farms or farmers.
Tanana Valley.....	48 reporting farms.
Matanuska Valley.....	225 reporting farmers.
Anchorage Area.....	² 23 reporting farmers.
Kenai Peninsula.....	³ 35 reporting farmers.
Kodiak and Aleutian Islands.....	5 reporting farmers.
Southeastern Alaska.....	⁴ 17 reporting farmers.

¹ As given in Alaska published information.

² Additional information obtained from informed sources.

³ Estimates based on available records for an additional 23 rural families.

⁴ Estimates based on available information for the remaining farm operations.

For the following year, 1954, the data for Matanuska Valley and the Anchorage area were obtained by mail questionnaires and personal interviews. Data for all other areas were estimates based on returned mail questionnaires, personal interviews, and other information gathered during 1954.

Censuses of Agriculture.—The data given for years prior to 1953 are from the periodic Censuses of Agriculture taken by the Bureau of the Census. The first United States Census of Agriculture of Alaska was taken in 1900 as part of the Twelfth Decennial Census. Since that date a Census of Agriculture has been taken in conjunction with the Census of Population in decennial enumeration.

These Census enumerations furnished some information which is not obtainable from the available statistics for 1954 and 1953. A part of this information for these earlier Censuses, such as the number of farms and the acreage of land in farms, is given below.

Item	1950 (Apr. 1)	1939 (Oct. 1)	1929 (Oct. 1)	1920 (Jan. 1)	1910 (Jan. 1)	1900 (June 1)
Farms.....number..	525	625	500	364	222	12
Land in farms acres..	421, 799	1, 775, 762	525, 942	90, 652	42, 544	159

Presentation of statistics.—Only limited comparisons are possible between the data for 1954 and 1953 on the one hand and the data for 1950 and earlier Censuses on the other. In the 1950 and earlier Censuses, statistics conformed to judicial division boundaries. Data for 1954 and 1953 were published by geographic areas. Only a few of the comparative data are presented herein, for all years. This historical series is given only for the Territory. A more extended comparison is made for 1954 and 1950, by judicial divisions. A full presentation is made of all available data for 1954 and 1953, by geographic areas.

For this report, in order to make subdivision comparisons, it was necessary to assemble the 1954 data for geographic areas by judicial divisions.

Southeastern Alaska, for which data are presented for 1954 and 1953, includes Judicial Division 1 and a part of Judicial Division 3. The part of Judicial Division 3 included is Valdez and the area to the South. Therefore, in considering Southeastern Alaska statistics as representative of Judicial Division 1, an overstatement is made to the extent that the Valdez area is included. Likewise, the 1954 and 1953 statistics, which are presented to represent Judicial Division 3, are understated to the extent that the Valdez area is excluded. Thus, if there were any items produced in appreciable amounts in the Valdez area, data for these two Divisions are affected accordingly.

The geographic areas which were combined to compare with each judicial division are as follows:

Geographic area	Judicial division
Southeastern Alaska.....	1
Tanana Valley.....	1, 2, 4
Matanuska Valley.....	3
Anchorage Area.....	
Kenai Peninsula.....	
Kodiak and Aleutian Islands.....	

¹ For the 1950 Census, the data for these two divisions were combined.

Livestock and livestock products.—The classification of livestock by age and sex for the recent years has been made on a different basis than for former years. The major part of the

change has been to differentiate between dairy and beef animals. Because of the varying classes, a comparison of inventory numbers only has been made for all years for which data are available. These data are shown in Table 1.

TABLE 1.—NUMBER OF SPECIFIED CLASSES OF LIVESTOCK ON FARMS: 1900 TO 1955

Year and date of enumeration	Horses and mules	Cattle and calves	Hogs and pigs	Sheep and lambs	Chickens
1955 (Jan. 1).....	Number (NA)	Number	Number	Number	Number
1954 (Jan. 1).....	¹ 106	5,757	1,062	9,110	43,026
1950 (Apr. 1).....	207	5,180	589	9,183	31,350
1939 (Oct. 1).....	496	2,235	1,201	6,046	20,278
1929 (Oct. 1).....	319	3,749	959	17,076	18,374
1920 (Jan. 1).....	395	1,869	310	6,858	10,979
1910 (Jan. 1).....	218	640	273	132	4,563

		18	10	-----	² 176

NA—Not available.

¹ Horses.

² Chickens and guinea fowls.

The judicial division comparisons of data for livestock and livestock products are restricted to 2 years. These are shown in Table 2. The numbers of livestock on hand were taken from the 1954 Alaska report (inventories as of Jan. 1, 1955) and from the 1950 Census report (inventories as of Apr. 1, 1950). Since the subclasses of cattle are not comparable for the two periods of observation, no attempt has been made to show data for cows, heifers, calves, etc., by judicial divisions. The quantities of products and income data were obtained from the same sources but cover the calendar years 1954 and 1949, respectively.

Table 3 presents all livestock data contained in the 1954 and 1953 reports submitted by Alaska official sources. The available figures are given by geographic areas, not by judicial divisions.

According to these reports milk was the most important source of farm income. In 1954, milk accounted for 47 percent of the total farm income. Of the total milk production, 67 percent came from the Matanuska Valley, 16 percent from the Southeastern area, 7 percent from the Tanana Valley, and 10 percent from all other areas. All areas except Southeastern Alaska showed substantial increases from 1953 to 1954.

TABLE 2.—SELECTED DATA FOR LIVESTOCK AND LIVESTOCK PRODUCTS, BY JUDICIAL DIVISIONS: 1954 AND 1950

¹ Part of Judicial Division 3 included with Judicial Division 1. See text.

² No age limit mentioned for 1955; 1950 data are for chickens 4 months old and over.

Poultry products were third in importance as a source of farm income. They contributed about 15 percent of the total in 1954 and 13 percent in 1953. Both milk and potatoes ranked above poultry products as sources of farm income. According to the 1954 Alaska report, "The disastrously low statewide egg prices

were responsible for lower egg prices in Alaska. Production of local eggs increased 25 percent, however, over 1953. The most severe price competition occurred during the latter part of the year and carried into 1955. Broiler and fryer production was down considerably in 1954."

NA—Not available.

¹ Does not include pack and riding horses in outlying districts.

Cropland and crops harvested.—An exact comparison of the acreage either capable of being used for crops or actually used for crops, through the various years, cannot be made. However, the acreage harvested for some individual crops can be directly compared. Table 4 sets forth some of the data for the Territory to indicate comparisons for the several years.

Only a very limited amount of data is available for crops harvested in 1954. Hence, the figures presented in Table 5 for 1954 and 1950, by judicial divisions, are restricted to potatoes and vegetables harvested for sale. The acreage of cropland is also presented in Table 5; however, much of this acreage was not actually used for crops. The 13,215 acres shown for 1954 were distributed in the 1954 Alaska report as follows:

Potatoes..... 1,160 acres
 Vegetables for sale..... 305 acres
 Other crops and idle cropland..... 11,750 acres

The 1953 Alaska report gives a more detailed composition of the cropland, which totaled 12,334 acres for that year. The detail is as follows:

Potatoes..... 1,505 acres
 Vegetables for sale..... 242 acres
 Home garden..... 35 acres
 Grains..... 1,027 acres
 Hays..... 5,334 acres
 Seeded pasture..... 1,913 acres
 Idle, fallow, or green manure..... 2,278 acres

NA—Not available.

¹ For 1939 does not include cropland pasture. For years prior to 1939, acreage reported as "improved land."

² Excluding home garden.

³ For 1953 includes tame grass hay, grass silage, oat-pea hay, and oat-pea silage only.

acres 1949..	11, 177	873	2, 000	8, 298

¹ Part of Judicial Division 3 included with Judicial Division 1. See text.
² Includes income from crops except potatoes, divided as follows: Cabbage, \$38,578; lettuce, \$57,470; carrots, \$33,122; and other produce, \$69,682.
³ For both years these figures represent the difference between total cropland and the total for potatoes and vegetables.

According to the 1954 Alaska report there were 13,215 acres of cropland in the Territory, which was 881 acres in excess of the 1953 total of 12,334 acres. Much of this increase can be attributed to 1,038 acres cleared in 1953. In 1954, an additional 1,035 acres were cleared.

Feed crops, mostly forage, and potatoes and vegetables comprised nearly all the crops grown in the Territory. Potato sales were the second important source of farm income, furnishing about one-third of the total farm income in 1953. Reduced plantings in 1954 and slightly lower yields resulted in a production 30 percent less than in 1953. Actual sales were off not more than 10 percent. Decreased disease loss and improved storage were the principal factors in maintaining sales when production declined. In 1954, 52 percent came from the Matanuska Valley, 33 percent from the Tanana Valley, 11 percent from the Anchorage area, and 4 percent from all other areas.

Lettuce, carrots, and cabbage were, by far, the most important vegetables grown. Vegetable acreage was approximately the same for the two years but the production for 1954 brought 13 percent less due to lower prices.

NA—Not available.

¹ No report.² Land cleared was not included as such in total cropland for the year in which it was cleared. It may have been utilized as idle land, cropland, etc.

Value of agricultural production.—Table 7 gives figures on the value of agricultural production of Alaska. Data are shown, for both 1954 and 1953, by geographic areas and for farm use and commercial production. The commercial production is further subdivided into income from vegetables and from livestock sales. There is no clear indication, in the available statistics, that any crops other than vegetables were sold. For example, in the statistics for 1954, "Other produce" was listed under vegetables, which could refer to miscellaneous vegetables or possibly to non-vegetable crops.

The value of agricultural production for all of Alaska in 1954 differed only slightly from that in 1953 with the Southeastern Alaska area showing the greatest variation, an increase of over 40 percent. The value of products used on the farm in 1954 was estimated at 8 percent of the commercial production for that year. Matanuska Valley, with 54.7 percent of agricultural production for farm use in 1954 and 64.9 percent in 1953, was the most important producing area. This area also led in commercial production (production for sale) with 54.7 percent of the Territorial total in 1954 and 55.3 percent in 1953.

TABLE 7.—VALUE OF AGRICULTURAL PRODUCTION FOR HOME USE AND FOR SALE, BY GEOGRAPHIC AREAS: 1954 AND 1953

Item	Year	Alaska, total	Tanana Valley	Matanuska Valley	Anchorage Area	Kenai Peninsula	Kodiak and Aleutian Islands	Southeastern Alaska

	1953	2,819,836	449,382	1,574,471	222,465	169,304	100,000	304,214
Farm use.....	1954	213,182	28,190	116,554	16,553	12,473	7,772	31,640
	1953	153,652	12,998	99,697	7,097	22,115	5,400	6,355
Commercial, total.....	1954	2,664,770	352,375	1,456,929	206,909	155,907	97,150	395,500
	1953	2,666,184	436,384	1,474,784	215,368	147,189	94,600	297,859
Vegetables sold.....	1954	816,857	242,400	446,518	87,324	20,615	2,500	17,500
	1953	1,165,949	347,247	651,237	119,950	20,015	2,500	15,000
Livestock and livestock products sold.....	1954	1,847,913	109,975	1,010,411	119,585	135,292	94,650	378,000
	1953	1,510,235	89,137	823,547	95,418	127,174	92,100	282,859

Comparability of data.—Comparability is affected by factors, such as the time of enumeration, the wording of the questions, and the definition of a farm. For 1954 and 1953, no mention was made as to the date of the mailing of questionnaires, the date of the interviews, or to the minimum for area or production to be reported. In reference to the minimum area or amount of production for enumeration, the following statement, applying to 1954, was contained in the reply to the Bureau's request for available information: "Our procedure encompasses a mailed questionnaire to all persons known to be engaged in any agriculture." Since the production data for 1954 are presented with the matching inventories as of January 1, 1955, and since these data were furnished to the Bureau shortly after July 1, 1955, it seems safe to assume that the data were gathered shortly after January 1.

For the 1950 Census of Agriculture a farm was any place with either 3 or more acres and \$150 or more of agricultural products or less than 3 acres, provided the value of sales of agricultural products amounted to \$150 or more. Places that did not meet

these minimum requirements were considered farms only if they had sufficient potential to meet these minima.

The Census enumerators were not required to determine which places were farms. They were instructed to enumerate all places that the operator called farms, all places of 3 or more acres, and certain specialized operations, such as greenhouses. The determination as to which operations constituted farms was made during the office processing in Washington.

For 1950, the Census of Agriculture was taken as of April 1 of that year. Most of the farms were enumerated in April and May. Inventory items relate to April 1; data on acreage, production, and sales to the crop year 1949.

The classification of livestock by age and sex for 1954 (January 1, 1955) varies somewhat from that used in 1950. The differing classifications are indicated in the tables presenting livestock data. The method of reporting crops also varied. This is indicated more fully in the several crop tables.

AMERICAN SAMOA

Islands, Districts, and Counties

AMERICAN SAMOA

Introduction.—American Samoa, since July 1, 1951, has been under the administrative control of the Department of the Interior. In response to the Director's letter of April 22, 1955, requesting agricultural data for 1954, the Governor of American Samoa furnished the available statistics. In making the presentation herein, these data have been supplemented by a few taken from the 1955 and 1954 Annual Reports of the Governor to the Secretary of the Interior.

In order to better understand the present situation of agriculture and its future possibilities, parts of a few paragraphs are quoted from the Governor's 1955 Annual Report, as follows:

"American Samoa is composed of 7 islands divided into 3 groups. Tutuila, and adjacent island, Aunuu, are the center of all governmental activities. The Manua group, some 80 miles to the east, is the source of the greater part of copra for export * * *. Rose and Swains Islands are both coral atolls, Rose being uninhabited and Swains being the home of some 75 persons * * *.

"The population of American Samoa is estimated at 21,500 as of June 30, 1955.

"The islands of Tutuila and Manua are volcanic in origin, extremely mountainous, covered with dense tropical vegetation, and surrounded by fringing coral reefs. Steep-sided valleys and narrow coastal plains provide the only area suitable for agriculture. Through their practice of shifting cultivation, the Samoans have been able to utilize the precipitous slopes of the hills for garden plots containing taro, bananas, and tapioca.

"The Samoan economy is essentially agrarian. With the rapidly increasing population, emphasis is being put on increasing subsistence crops, as well as money crops. Cocoa has been introduced during the last year as a source of income, and several small shipments have been made recently for export. Coffee is also being planted, and information on the care and production is being relayed to coffee growers via radio broadcasts and informational booklets. Copra still continues to be the largest export of the indigenous people. (Exports of copra, sun dried, amounted to 1,485 tons for the fiscal year ended June 30, 1955.)

"Most of the agricultural land is very steep and is used for plantations due to the pressure of the population. One church organization uses an area for pasture, and the Government-operated dairy utilizes an area for pasture. These are the only two pastures in American Samoa.

"Land tenure is mainly the matai or family group * * *. Since the bulk of the land is under the matai system, the chief or the matai rents land with the advice of his village council and the proceeds are divided among the members of the clan."

The data received from the Governor of Samoa were compiled from the reports of Extension Agents working for the Samoan Department of Agriculture. The duties of the Extension Agents involve the making of crop reports; conducting special crop surveys, for crops such as banana and cocoa; and the giving of advice in general to planters.

There was no mention made of the exact period to which the data relate, the definition of a farm, or the method by which the basic data were obtained. However, since the reporting forms sent to the Governor requested information for 1954, it is presumed that the data furnished relate to some point of time

between July 1, 1954, and June 30, 1955. This latter assumption is strengthened by the fact that several of the quoted data are in agreement with those given in the 1955 Annual Report for the year ended June 30 of that year.

Censuses of agriculture.—The first United States Census of Agriculture of American Samoa was taken in 1920 in conjunction with the Census of Population. Since that date a Census of Agriculture has been taken every 10 years up to and including the 1950 Census. There was no Census taken in 1954. Instead, an act of Congress directed that statistics from various Government sources be used.

In the 1950 Census of Agriculture, any place that had any livestock or 5 or more poultry on April 1, 1950, or on which any crops were harvested in 1949, was considered a farm. The enumerator was instructed to obtain a questionnaire for every place that grew crops in 1949 or kept livestock or poultry on April 1, 1950. The determination as to which reports constituted a farm was made during the office processing of the questionnaires in Washington.

The 1950 Agriculture Questionnaire contained 31 questions calling for the name of the operator, the name of the owner of the property if other than operator, acres in the property, the area and quantity of the individual crops harvested in 1949, the number of trees or plants on April 1, 1950, and the quantity harvested in 1949 for individual fruits and nuts, and the number of the several classes of livestock on hand on April 1, 1950.

Presentation of statistics.—Data are presented herein for all Census years and for 1954 when figures are available. In several instances, an assumption has been made that the data relate to 1954 when they could be applicable to 1955 or perhaps to both years. Information is shown for several items, for earlier Census years, even though no data seem to exist for recent years. Since the most recent data can be presented for the entire area only, no attempt has been made to show island or county totals.

¹ Not reported.² Plants not reported; 2,500 acres (see Table 2); 2,500 tons as shown in 1955 fiscal year report.³ Estimated, data incomplete.⁴ Approximately 2,000 acres planted in new cocoa between July 1954, and July 1955, according to 1955 fiscal year report.⁵ Exports from American Samoa to the United States in 1939.

DISTRICT OF COLUMBIA

Agricultural production has been declining in the District of Columbia, particularly since the turn of the century. Land formerly used for the production of crops or the pasturing of livestock has been utilized largely for residential and office construction (public and private) and for parks, streets, etc.

The approximate land area, in 1950, comprised 39,040 acres. At that time, only 1,265 acres were in farms. Two of the largest farms were institutional, belonging to the Federal Government. Neither of these were in operation in 1954. The following table portrays the trend in the number of farms and in the acreage of farmland and cropland harvested since figures were first gathered in a Federal Census of Agriculture.

Year	Number of farms	Land in farms	Cropland harvested ¹
		(Acres)	(Acres)
1950.....	28	1,265	266
1945.....	40	1,854	867
1940.....	65	2,341	1,017
1935.....	89	2,801	1,495
1930.....	104	3,071	1,737
1925.....	139	3,813	2,197
1920.....	204	5,668	2,230
1910.....	217	6,063	2,982
1900.....	269	8,489	3,396
1890.....	382	11,745	2,522
1880.....	435	18,146	4,568
1870.....	209	11,677	(NA)
1860.....	238	34,263	(NA)
1850.....	267	27,454	(NA)

NA—Not available.

¹ Prior to 1925, the data relate to the total acreage of crops for which figures are available.

Since the act of Congress providing for the 1954 Census of Agriculture expressly excluded the District of Columbia from the area for enumeration, an effort was made to ascertain if there were any data available from official sources. Agricultural activities most likely to be carried on in the National Capital area would be plant nurseries, greenhouses, vegetable gardens, and keeping of domestic animals and poultry. The Assessor's Office, particularly the Real Estate Tax Division, the Personal Tax Division, the Sales and Use Tax Division, and the Income and Franchise Tax Division, had no information identifying lands and other forms of property used for agricultural production.

The Health Department makes inspectional visits to dairy farms, dairy plants, etc., for sanitation purposes. A license is needed to raise livestock but none had been issued for 1954 with the exception of a livery stable that keeps riding horses for hire.

A horticulturist of the National Capitol Parks Division of the United States Interior Department named four establishments in the District of Columbia that were growing flowers or plants for sale. The Trees and Parks Division of the District Government confirmed the information concerning the raising of nursery and/or greenhouse crops for sale. An official reported he had observed no places raising vegetables or other crops for sale. In the 1950 Census of Agriculture 2 establishments reported nursery products grown for sale, 16 reported sales of flowers and/or flowering plants, and 10 reported sales of vegetables grown under glass and/or vegetable plants. Four farms reported vegetables grown in the open for sale. An establishment may be represented more than once in the above counts.

The 1950 Census of Agriculture recorded \$569,621 as the total value of sales of all farm products for 1949. Of this total, \$429,311 was represented by crops, \$139,810 by livestock and livestock products, and \$500 by forest products. The crop total comprised \$1,998 for field crops, \$3,575 for vegetables, \$206 for fruits and nuts, and \$423,532 for horticultural specialties.

GUAM

Introduction.—The most recent data, in this report, for Guam were secured from the Office of the Governor. Some of the figures were entered on statistical tables which the Bureau of the Census had supplied. The following sentences appeared in the Governor's letter to the Director of the Census: "The data are for the year ending June 30, 1954. They were obtained by our Farm Advisers who collected production figures from individual farmers during the year." The attention of the Bureau was called to additional data which were contained in the Governor's 1954 Annual Report to the Secretary of the Interior. For comparative purposes some data from the 10-year Censuses of Agriculture, beginning with 1920, are also presented.

A few excerpts are quoted from the 1954 Annual Report, for the fiscal year ended June 30.

"This was a challenging year for Guam farmers * * *. The distribution of rainfall, so important to agriculture, was somewhat unfavorable, there being 62.3 inches August to October and only 12.5 inches February to June. Typhoon Nina in August destroyed or retarded an estimated two-thirds of the growing corn, bananas, papayas, and vegetables; and the same proportion of fish weirs. On the favorable side, the farmers found a strong demand for their produce. They saw more evidence that better care of crops and livestock contributes to better harvests, and were challenged to better farming.

"Rice planting was revived by three Talofof farmers with great success.

"Guam's climate permits pasturing of cattle all seasons of the year. Because of such inexpensive feed, cattle should be the most important kind of livestock in Guam. Large sections of the Island consist of rough and arid lands, suitable only for grazing. Very little grain is readily available for cattle fodder in Guam.

"Guam is well adapted to hog production; there being enough readily available swill to maintain at least 20,000 head.

"* * * The number of farm animals in Guam has passed that of prewar days."

Censuses of agriculture.—The first United States Census of Agriculture was taken in 1920 in conjunction with the Census of Population. A Census of Agriculture has been taken every 10 years since that date.

Most of the comparative data are understandable without explanatory text. However, because of the large difference in the number of farms for 1954 and 1950, the definition of a farm is given for the 1950 Census. For the 1950 Census of Agriculture, places were counted as farms if any crops were grown in 1949 or if any livestock or 5 or more chickens or other poultry were kept in April 1, 1950. However, the Census enumerator was not given that definition of a farm. He was instructed to obtain an agriculture questionnaire for every place on which crops were grown

in 1949 or on which any livestock or poultry were kept on April 1, 1950.

TABLE 1.—NUMBER OF FARMS, LAND IN FARMS, AND NUMBER OF LIVESTOCK ON FARMS: 1920 TO 1954

Comparability of 1954 statistics.—The totals given in Table 1 differ slightly from the totals, distributed by municipalities, in Table 5. Those in Table 1 were submitted to the Bureau of the Governor's transmittal in May 1955, while those in Table 5 were taken from the 1954 fiscal year report (year ending June 30, 1954.)

HAWAII

HAWAII

Introduction.—A request was made to the Agricultural Extension Service, University of Hawaii, for the agricultural statistics for Hawaii which were required for incorporation in the Reports for the 1954 Census of Agriculture. The nature of the data desired was indicated in a set of tables furnished by the Census Bureau.

In the reply to the Bureau's request, it was stated that the available data did not fit well into the outline that had been furnished. The following statement was contained in the correspondence: "In many cases our estimate base is radically different from yours. For example, our crop values are calculated at the wholesale level—yours at the farm level. Our poultry and hog population estimates do not include those kept principally for the owner's household use."

A copy of the annual report entitled "1954 Statistics of Hawaiian Agriculture" was submitted. This and a similar report for 1955 have supplied the most recent factual material given in this section. The 1954 report sets forth the source of the statistics and several of their limitations, as follows:

"The statistics of production and value in this publication relate principally to 'diversified' agriculture, *diversified* being used in the sense of nonplantation crops. Statistical material on the two plantation crops, sugar and pineapples, was furnished by the Hawaiian Sugar Planters' Association and the Pineapple Companies of Hawaii.

"Data on diversified agriculture are for 'commercial' production, which excludes very small farm enterprises, some of the minor crops, and products consumed on farms. A few crops for which production or acreage data are unreliable, e. g., Chinese squash, Chinese peas, yam bean root, peanuts, mangoes, lychee, passion fruit, guavas, plums, grapes, persimmons, and pineapples for the fresh fruit market are not included. *Commercial* production of livestock products is defined as the portion originating from beef cattle herds of 20 or more head, dairy and swine herds of 10 or more, and poultry flocks of 100 or more layers or meat birds.

"Basic livestock data are collected in August or December by mailed questionnaires and enumeration by county agents. Monthly estimates of dairy, poultry, and hog production are obtained from stratified samples of enterprises, supplemented by slaughter records. Production of fruits and vegetables is estimated from recorded wholesale marketings, adjusted for direct sales to retail stores or to consumers, and for field losses of mature crops resulting from market gluts. Coffee, rice, and taro production is estimated from milling records. Acreage of diversified crops is obtained by monthly enumeration."

Censuses of agriculture.—The first Census of Agriculture in Hawaii, by the United States, was taken in 1900 in conjunction with the Decennial Census of Population. Since 1900, a Census of Agriculture has been taken in conjunction with the Census of Population in each decennial enumeration.

Because of the restricted comparability of the available data for Census years with the statistics for recent years, only a few items are included in the historical tables. In order to understand the limitations in the comparability of the data for the two series, the definition of a farm, as used in 1950 only, is given herein. If there is need for contrasting the exact comparability of data for 1950 and earlier years, reference should be made to the 1950 Report for this Territory.

For the 1950 Census of Agriculture, places of 3 or more acres were counted as farms if the value of agricultural products in 1949, exclusive of home gardens, amounted to \$150 or more. The agricultural products could have been either for home use or for sale. Places of less than 3 acres were counted as farms only if the value

of sales of agricultural products in 1949 amounted to \$150 or more. Places operated in 1949 for which the value of agricultural products in 1949 was less than these minima because of crop failure or other unusual situation and places operated in 1950 for the first time were counted as farms if normally they could be expected to produce these minimum quantities of farm products.

All the land under the control of one person or partnership was included as one farm. Control may have been through ownership, or through lease or rental arrangement.

The Census enumerator was not given the definition of a farm. He was instructed to obtain an agriculture questionnaire for every place that the operator considered a farm, for every place of 3 or more acres whether or not it was considered a farm, and for places of less than 3 acres from which agricultural products (vegetables, flowers, orchids, eggs, poultry, hogs, etc.) valued at \$100 or more were sold in 1949. Thus, agriculture questionnaires were filled for more places than those that qualified as farms. The determination as to which reports were to be included in the tabulations as representing farms was made during the processing of the questionnaires in Washington. This procedure was followed in order that uniform criteria could be applied.

Land utilization.—Table 1 is presented to show the natural resources available for agricultural production and how these resources were utilized in 1954 and 1950.

TABLE 1.—AGRICULTURAL LAND UTILIZATION: 1954 AND 1950

Use	1954	Census of 1950
	(Acres)	(Acres)
Total land area.....	4,099,840	4,099,840

Forest reserve.....	1,045,000	(NA)
Balance.....	1,363,640	(NA)

NA—Not available.

1 Total of cropland harvested, cropland for future harvest, and crop failure.

2 Acres in the crop, Dec. 31, 1949.

3 Acres in the crop, Apr. 1, 1950.

4 Acreage data of diversified crops for Molokai not included.

5 Land in orchards, groves, coffee plantations, planted nut trees, vegetables for sale, Irish potatoes, and sweetpotatoes.

6 Land in farms, pastured in 1949.

Livestock and poultry.—Comparative figures for livestock and poultry, for 1954 and for Census enumerations, are given in Table 2 for a limited number of items. The 1954 data are for the dates shown in Table 3. Table 4 presents a few of the data for Islands for 1954 only.

Crops.—Tables 5, 6, and 7 present the data for crops. Where possible, the acreage, production, and the wholesale value of marketings are given. Whenever historical data are shown, footnotes have been used to point out any seeming lack of comparability. Historical comparisons and the distribution of data by Islands are limited to those crops with approximately 200 acres or more.

Honey and beeswax are included with crops to conform with the statistics in the 1954 Report. Likewise, the order of arrangement and the classification of the crops are consistent with those in the 1954 Report.

NA—Not available.

¹ Data for Molokai not included.

² Acreage of tree fruits, lotus root, taro, and water cress is average acreage for year. Acreage of melons, other vegetables, and rice is plantings harvested during the year.

³ Acreage of coffee and macadamia nuts is that at end of year. Production is estimated from recorded marketings, with adjustments for direct sales to retailers or consumers by farmers. Field losses resulting from market gluts are included in the production estimates.

⁴ Value is calculated at average wholesale prices of marketings on the Island of origin. No value is included for the following quantities of crops not harvested because of market conditions (1,000 pounds): 15 avocados, 50 oranges, 170 papayas, 10 tangerines, 270 head cabbage, 55 carrots, 30 cucumbers, 5 dry onions, 155 pumpkins, 60 sweetpotatoes, and 75 tomatoes. Value of sugar and pineapples includes processed products and byproducts.

⁵ Includes cooking bananas.

⁶ Crop year ending June 30 for production and value; green basis.

⁷ Production and value are in-shell basis.

⁸ Production and value are milled basis.

⁹ Revised figure is 37,000. 22,000 was retained to maintain internal consistency.

NA—Not available.

¹ 87 reporting upland and 238 reporting wetland.² 1,222 reporting vegetables harvested for sale and 1,434 reporting tree fruits, nuts, and coffee.³ 847 beef cattle enterprises of all sizes at the end of 1954, 86 dairy enterprises.⁴ Reporting chickens 4 months old and over on hand.

Value of marketings.—Table 9 brings together the value of marketings for the principal commodities which enter into commercial channels. The values were calculated at the wholesale or processing plant level for products consumed in the Territory, and free alongside ship, island port, for diversified export products. Values of diversified crops and livestock are for marketings and exclude the value of products consumed on farms or not harvested because of marketing factors.

Agricultural products in 1954 were valued at \$285,737,000. Of

this total \$141,000,000 was represented by sugar. The value of processed pineapple products was \$108,000,000. Livestock products contributed \$24,763,000 and diversified crops accounted for nearly \$12,000,000. The value of processed fruits, other than pineapples, and of flowers and foliage was not estimated.

The value of coffee production (green basis, f. o. b. mill) for the crop year ending June 1954, was \$5,537,000. Macadamia nut production amounted to \$159,000; rice, \$105,000; taro for poi manufacture, \$408,000; and honey and beeswax, \$22,000.

TABLE 9.—VALUE OF AGRICULTURAL MARKETINGS: 1954¹

Item	Value of production	
	Total	Percent of total
All agricultural products	Dollars 285,737,000	100.0
Sugar products ²	141,000,000	49.3

5.—Estimated farm value of production of agricultural commodities: fiscal year 1953-1954.....	43

PUERTO RICO

Introduction.—The Department of Agriculture and Commerce of the Commonwealth of Puerto Rico supplied the 1954 data which are incorporated in this section. The reply to the Bureau's request for information contained this pertinent paragraph:

"* * * we are returning the tables with all the available data for 1954. The data in the tables have been adjusted to make them comparable to the 1950 census figures; that is, we have eliminated from our estimates all the information related to the parcelas or farms of less than 3 cuerdas."

The reply also made reference to a report entitled "Gathering of Agricultural Basic Data in Puerto Rico" for a detailed description of the methods used in the collection of agricultural data in Puerto Rico. This descriptive report refers to initiation of a sample survey in 1950. During that year, four surveys were conducted in which 1,000 to 3,000 farmers were interviewed in a sample of areas (generally "barrios") scientifically selected to represent the entire island. There is no clear indication whether or not this seasonal sampling plan has been continued.

There are certain check data which can be used advantageously in making estimates for the Commonwealth. A few paragraphs from that Report are quoted to bring out the nature of the problem of making estimates and what was covered in the initial survey.

"This small island is predominantly agricultural, with a large percentage of the population dependent, either directly or indirectly, upon agriculture as a means of livelihood. There are on the Island about 55,000 farms ranging in size from 3 acres up to 15,000 acres or more and a similar number of parcelas of 0.25 to 2.99 acres. The average size of farms is about 35 acres (median value of 9 acres) and of parcelas, about 1 acre. Approximately one-half of the 2,000,000 acres of land in farms is cultivated. However, because of the year-round growing season, land may produce 2, 3 or even 4 crops during a year.

"On the basis of findings thus far it would appear desirable and feasible to inaugurate at once a regular and continuing program of reports on acreage, condition and progress, yield per acre, production, price, and value for 6 crops; namely, sugarcane, tobacco, cotton, pineapples, coconuts, and coffee. A high percentage—85 to 100 percent—of each of these crops is sold by the growers, either for export or for consumption on the Island. Furthermore, each tends to follow a regular seasonal pattern rather than being harvested in small quantities throughout the year. Independent check data are available through cane mills, cooperative associations, processors, coffee roaster, etc. These data can be used to check on the reliability of the information obtained from respondents by whatever method that might be used. * * * Livestock inventories, milk and egg production, plantains, flumes, dry beans, avocados, bananas, oranges, and sweetpotatoes appear to be the items that should be given next priority, since 40 to 75 percent of these crops are estimated as being sold. Also, most of these crops are grown on a sufficiently large number of farms to permit the use of sampling techniques already known. Other crops, of which less than one-third are sold, should be tackled only after the regular program is established and working smoothly for the items appearing in the first 2 categories.

"There remain many problems still to be solved in relation to the formulation of questions and the obtaining of accurate answers from farmers. To this end, we are continuing our analysis in conjunction with the Census and utilizing other data in our files. We are on the lookout for new check data and for new methods of checking the reliability of the estimates derived from our surveys."

The definition of a farm, of a farmer, and of a parcela, as used in the early surveys, are as follows:

"A farm consists of land of not less than 3 'cuerdas' on which agricultural operations are performed or directed by a person, partnership, or corporation (condensation of Census definition).

"A farmer is the operator of a farm. The farmer may own the land that he farms, he may have control of the land under a rental agreement, or he may have been employed as a manager. In this paper the term 'farmer' is used also in a general sense in reference to anyone who has an agricultural operation, no matter how small the amount of land that he farms.

"A 'parcela' consists of land of from $\frac{1}{4}$ to 3 'cuerdas' which comprises an entire agricultural operation."

Censuses of agriculture.—The first Census of Agriculture taken in Puerto Rico by the United States was made as of April 15, 1910. Since that time, a Census of Agriculture has been taken in conjunction with the Census of Population in each decennial enumeration. In 1935, a special Census of Puerto Rico was taken by the Puerto Rico Reconstruction Administration.

The 1950 Census of Agriculture was taken as of April 1, 1950. Inventory items relate approximately to that date. Data relating to areas and quantity of crops (except sugarcane) harvested and to sales of agricultural products are for the crop year extending from April 1, 1949, to March 31, 1950. Data on the area and quantity of sugarcane harvested are for the crop year extending from December 1, 1948, to November 30, 1949.

For previous Censuses, the inventory items relate to the date of the Census and the production items, with the exception of 1935, to the preceding calendar year. For 1935, the production items relate to the calendar year 1935.

For the 1950 Census of Agriculture, places of 3 or more cuerdas were counted as farms if any agricultural products other than vegetables for home use were produced in 1949 or if any livestock or 15 or more chickens or other poultry were kept on the place.

All the land under the control of one person or partnership was included as one farm. Control may have been through ownership, or through lease or rental arrangement.

In the 1950 enumeration, the Census enumerator was not given the definition of a farm. He was instructed to obtain an agriculture questionnaire for every place of 3 or more cuerdas, whether or not it was considered a farm. Thus, agriculture questionnaires were filled for more places than those that qualified as farms. The determination as to which reports were to be included in the tabulations as representing farms was made during the processing of the questionnaires in Washington.

The number of questionnaires which were retained in 1950 as representing farms was 53,515. Tracts of less than 3 cuerdas, with agricultural production, were not counted as farms in 1950. These places were enumerated as parcelas. They totaled 51,157 for that enumeration year. Most of these small tracts kept poultry and produced a variety of crops.

Presentation of statistics.—Data are presented only for the Commonwealth, as a whole. Comparative data are usually given for all Census enumerations. In a few instances, Census data are presented even though no recent data are available.

SPECIAL REPORTS

TABLE 1.—NUMBER AND AREA OF FARMS: 1910 TO 1954

Item	1954	Census of 1950 (Apr. 1)	Census of 1940 (Apr. 1)	Census of 1935 (Dec. 1)	Census of 1930 (Apr. 1)	Census of 1920 (Jan. 1)	Census of 1910 (Apr. 15)
Number of farms.....	52,096	53,516	55,519	52,790	52,965	41,078	58,371

NA—Not available.

¹ Age classes included not specified.

² Over 3 months old.

³ Included in total for cattle and calves over 3 months old; no other mention of age.

⁴ Cows and heifers 2 years old and over kept mainly for milk production.

⁵ Under 1 year old.

⁶ Over 4 nths old.

⁷ Over 6 months old.

⁸ Poultry of all kinds.

⁹ Poultry sold.

Introduction.—The 1954 statistics for the Virgin Islands were submitted by the Department of Agriculture and Labor through the Office of the Governor. In the Department's transmittal, the Commissioner stated: "Since we have not yet been able to collect such statistical data * * *, I have had to depend entirely upon the kind cooperation of the Virgin Islands Corporation and the Federal Experiment Station for such information as they collected during the last four-year period."

Censuses of agriculture.—The figures given in the tables for this report for 1950, 1940, 1930, and 1917 are from the Censuses of Agriculture taken under the supervision of the United States Bureau of the Census. The first United States Census of Agriculture of the Virgin Islands was taken in 1917, a special Census authorized by the Secretary of Commerce. The next Census was taken in 1930 in conjunction with the Census of Population. A Census of Agriculture was also taken in 1940 and 1950 in conjunction with the Censuses of Population.

The questionnaire used for the Census of Population contained one inquiry which was designed to help the enumerator to obtain an agriculture questionnaire for every place for which one was required. The inquiry read: "Is this house on a farm?" This inquiry was to be answered for every family. If the reply to this question was "Yes," the enumerator was to fill an agriculture questionnaire for the place. He was instructed to fill an agriculture questionnaire for every farm, for every place of 3 or more acres whether or not it was considered a farm, and for every place of less than 3 acres on which agricultural products valued at \$100 or more were produced in 1949, whether or not it was considered a farm.

For the 1950 Census of Agriculture, places, regardless of size, were counted as farms if the value of agricultural products in 1949, exclusive of home gardens, amounted to \$100 or more. The agricultural products could have been either for home use or for sale. Places operated in 1949, for which the value of agricultural products in 1949 was less than this minimum because of crop failure or other unusual situation, and places operated in 1950 or 1949 for the first time were counted as farms if normally they could be expected to produce these minimum quantities of farm products.

The Census enumerator was not given the definition of a farm. He was instructed to obtain an agriculture questionnaire for every place that the operator considered a farm, for every place of 3 or more acres whether or not it was considered a farm, and for every place of less than 3 acres if the agricultural products produced in 1949 were valued at \$100 or more. Thus, agriculture questionnaires were filled for more places than those that qualified as farms. The determination as to which reports were to be included in the tabulations as representing farms was made during the processing of the questionnaires in Washington.

The 1950 Census of Agriculture was taken as of April 1, 1950. Inventory items relate to approximately that date. Data on acreage of crops and quantity harvested are for the crop year 1949. The special Census of 1917 was taken as of November 1. Inventory items relate to November 1 and production items relate to the year ended October 31, 1917.

Presentation of statistics.—Data are presented only for the area, as a whole. Comparative data are usually given for all Census enumerations. In a few instances, Census data are presented even though no recent data are available.

TABLE 3.—SPECIFIED FIELD CROPS—ACRES AND QUANTITY HARVESTED: 1917 TO 1954

[Except for 1954 and 1917, the figures on acreage and production relate to the crop harvested preceding the Censuses. For 1930 and 1917, production relates to 12-month period ending Sept. 30]

Item	1954	Census of 1950 (Apr. 1)	Census of 1940 (Apr. 1)	Census of 1930 (Apr. 1)	Census of 1917 (Nov. 1)
Specified field crops, total acres..	(NA)	4, 416	4, 406	6, 523	16, 574
Corn.....acres..	25	49	25	20	25
pounds..	14, 666	29, 330	17, 200	13, 900	17, 700
Beans, dry.....acres..	120	24	17	3	1
