There were considerable variations in the various measures of efficiency both between subregions for the same type of tobacco and also among the different tobacco types (see Table 30). For flue-cured tobacco, both gross sales and net sales per man-equivalent were higher in subregion 24 than in subregion 25. In the Burley region, gross and net sales per man-equivalent in subregion 32 was only about 40 percent as much as in subregion 45. Both gross and net sales per man-equivalent was much lower in subregion 32 than in either of the other subregions.

Sales per \$1,000 invested were highest in the flue-cured regions. They averaged \$445 in subregion 24. They were lowest in subregion 32 of the Burley region, averaging only \$196 per \$1,000 investment. The total investment per man-equivalent was lowest in the two flue-cured subregions and highest in the Southern Maryland subregion. However, for subregion 24 the investment per crop-acre was the highest for any subregion and was higher for subregion 25 than any except the Southern Maryland subregion. The investment per crop-acre averaged \$132 in the dark-fired and air-cured subregion 53. However, in each of the other subregions the investment per crop acre was \$234 or more.

Crop acres per man-equivalent averaged only about 17 acres in each of the two flue-cured subregions. In the dark-fired and air-cured subregion, there was an average of 52 crop acres per man-equivalent.
