FARMS WITH LESS THAN \$2,500 GROSS SALES

Farms with less than \$2,500 gross sales comprise the Class VI commercial farms plus the part-time and part-retirement farms. They were generally more numerous in the eastern half of the United States with large numbers in the East South Central and South Atlantic divisions. They represented three-fifths or more of all farms in most of these two geographic divisions.

The data for farms with a value of farm products sold of less than \$2,500 affects significantly the averages for all farms. For example, when the farms with a value of farm products sold of less than \$2,500 are included in the total, the average value of farm products sold for farms in 1959 would be \$8,259; if these farms are excluded, the average value of farm products sold per farm would be \$13,975.

Most of the changes in the number of farms since 1950 have occurred in the number of farms with sales of farm products of less than \$2,500.

¹ Includes abnormal farms.

The decrease of 1,044,000 in the number of farms with sales of farm products of less than \$2,500 from 1954 to 1959 was affected by a change in the definition of a farm. The change in definition of a farm accounted for 22 percent of the change from 1954 to 1959 and 16 percent of the change from 1950 to 1959 in the number of farms with a value of products of less than \$2,500. If the definition of a farm had not been changed, the decrease from 1954 to 1959 would have been from 2,681,000 to 1,869,000 rather than to 1,637,000.

Farms with a value of farm products of under \$2,500 declined more than 50 percent from 1950 to 1959. They accounted for 61 percent of all farms in 1950 and only 44 percent in 1959. In 1950, they accounted for 12 percent of all farm products sold as compared with only 5 percent in 1959.

The change in farms with less than \$2,500 of farm products sold accounts for a large part of the change in all farms.
