

Sorghums harvested for sirup were harvested on less than 16,000 farms in 1959. This number was less than 7 percent of

the number of farms reporting sorghums for sirup in 1934, while the 1959 acreage was only one-eighth that of 1934.

Irish potatoes, the ninth most important field crop, accounted for 3 percent of the value of all field crops harvested, but the acreage represented less than one-half of 1 percent of the acreage

of cropland harvested. Approximately 86.5 percent of the 1959 production of Irish potatoes was sold.
