Volume III, part 2, page 8, first column

Please—Replace list under paragraph 5 with the following:

1. \$50 or more in value of products sold.
2. 2 or more acres of crop failure.
3. 5 or more acres in summer fallow.
4. 5 or more acres in cropland pasture and improved other pasture.
5. 10 or more acres in other pasture and woodland pasture.
6. 50 or more chickens 4 months old and over on hand.
7. 5 or more sheep and lambs on hand.
8. 5 or more goats and kids on hand.
9. 5 or more hogs and pigs on hand.
10. 5 or more cattle and calves on hand.
11. 2 or more cows on hand.
12. 0.2 or more acres of tobacco harvested.
13. 100 or more pounds of tobacco harvested.
14. 0.5 or more acres in vegetables, berries, and orchards.
15. 3 or more acres of hay and no cattle on hand.
16. 2 or more acres of corn and no cattle and calves or hogs and pigs on hand..

Please—Replace list under paragraph 6 with the following:

1. \$250 or more in value of products sold.
2. 5 or more acres of crop failure.
3. 100 or more chickens 4 months old and over on hand.
4. 10 or more sheep and lambs on hand.
5. 10 or more goats and kids on hand.
6. 10 or more hogs and pigs on hand.
7. 10 or more cattle and calves on hand.
8. 4 or more cows on hand.
9. 0.3 or more acres of tobacco harvested.
10. 500 or more pounds of tobacco harvested.
11. 2 or more acres in vegetables, berries, and orchards.
12. 5 or more acres of corn and no cattle and calves or hogs and pigs on hand.

Chapter 1. Persons Working on Farms

Introduction—The measurement of persons working on farms, hours worked, labor inputs and labor productivity is difficult. Moreover, estimates on the size of the agricultural work force, hours of work performed, labor inputs, etc., differ considerably according to the definition, judgment of statisticians, and date of enumeration. The measurement of the agricultural work force is complicated by:

1. The highly seasonal nature of agriculture. There are periods of peak employment when crops must be planted or harvested and there are low periods of employment when weather and crop requirements make labor needs low. For many single enterprise crop farms, short planting and harvesting seasons claim a large part of the annual labor inputs. (The total persons doing farmwork in 1965-1966 varied from 4.6 million to more than 8 million and the number of hired persons varied from 750,000 to 3,300,000.)
2. Dual employment among the agricultural labor force is widespread. One or more members of 2.1 million farm operator's families worked off the farm in 1965-1966. Almost 1.6 million farm operators, more than 800,000 wives of farm operators, and almost 900,000 other members of farm-operator households performed work for pay off the farm in 1965-1966. Work off the farm for pay by these groups totaled 3.7 billion hours in 1965-1966. For 1.1 million farm operators, the hours of off-farm work were 2,000 or more for the 52 weeks. For many of these farm operators, dual employment represented either a way to enter agriculture or a prelude to leaving agriculture. Dual employment is also very high among the hired farm labor force.
3. From 1940 to 1964, there was a net transfer of approximately 17 million persons from farm to nonfarm residence. From 1959 to 1964, the farm population declined from 16.6 million to 13.0 million. This outflow of people from agriculture has not been a continuous process nor has the rate of outflow been uniform by area or by kind of farm. A substantial part of the exodus was composed of young and middle age adults. As a consequence of the large number of people leaving agriculture, the composition of the agricultural work force by age and sex is not a typical cross section of the population. Because of the age and sex distribution of the farm population, and the nature and structure of farming, labor participation rates for women, teenagers, and older persons differ in agriculture from those for other parts of the economy. The recent waves of exodus of mainly younger farm people affect the age distribution of farm operators. As the farm operators have aged, the number of farm operators has been reduced.
4. The estimation of man-hours of farmwork on the basis of the application of standard labor requirements for each crop and kind of animal or animal product provides less and less satisfactory measures of labor uses as these labor norms refer to assumed average situation and level of technology prevailing at the time. The great variation among farms in the composition of both quantity and quality

of the "basket" of farm enterprises, the great variation in management performance among farm operators, the differences among farms in the dynamic replacement of modern technology by more modern and complex technology, differences in the substitution of capital inputs for land and labor among enterprises, farms and areas, the effect of fixed investments in buildings and equipment on the lag in the making of changes on individual farms, lack of off-farm employment in some areas, competition of off-farm industries for labor in some areas, age distribution of the available agricultural labor force, seasonal distribution of the farmwork requirements, the use of family labor because it is available on many small farms, and cultural and psychological characteristics of the farm labor force cause estimates based on labor standards to differ significantly from actual use of farm labor.

5. Considerable farmwork is performed by contract services or through farm customwork. Many farm operators do not consider workers provided through contract services as hired farmworkers and some farm operators do not know the hours worked by contract workers. Likewise, hours of work performed by persons performing customwork cannot be determined by farm operators and thus allocated to individual farms. Moreover, often the persons providing contract services or customwork are not farm operators and are therefore not covered by surveys directed to farm operators.
6. Some farm operators and members of their family perform farmwork on other farms. Thus, the counting of persons working on farms on the basis of reports from individual farm operators results in some double counting of farmworkers. The tabulations for the 1964 Census of Agriculture indicate that approximately 4 percent of the days farm operators worked off the farm operated were for work at farmwork on another farm. The 1964 Census of Agriculture tabulations indicate also that 7 percent of the days worked off the farm operated by members of the household of the farm operator were spent at farmwork on another farm, and that 5 percent of the days that both the farm operators and members of their household worked off the farm operated in 1964 were spent at farmwork on another farm.

Design of surveys—In order to provide data on persons working on farms, hired farmworkers, and hours of work, two special surveys were undertaken. These surveys were initiated in March 1965 and they covered a period of 52 weeks. The survey of farmworkers was designed to cover the farms on which the farm operator and members of his family provided the major part of the hours of farmwork on the farm. The survey of hired farmworkers was designed to provide data for farms on which the major part of the hours of farmwork was provided by hired farmworkers. As the description of the samples presented in chapters 2 and 3 indicates, the method of sampling for the two surveys differed. The survey of farmworkers covered more than 98 percent of the farms and the survey of hired farmworkers covered approximately 1 1/2 percent of the farms.

DEFINITIONS AND EXPLANATIONS

Descriptive summary and references—The definitions and explanations that follow relate only to those items that are considered to be inadequately described in the tables where the data appear. For the format used and the wording of the questions and instructions included on the questionnaire, see the facsimile of a questionnaire in the appendix of this report.

Definitions and explanations which are of primary importance in respect to the data presented in a given chapter are included in the text accompanying that chapter. The data included in the three chapters relate to places counted as farms in the 1964 Census of Agriculture. For the tabulations of data for the survey of farm workers and the survey of hired farm workers, the classification of farms included in the survey was the classification of the farm in the 1964 Census of Agriculture. Thus, the classification of farms by size of farm, tenure of operator, economic class of farm, and type of farm are those for 1964. Likewise, the data given for land in farms, cropland harvested, number of regular hired workers, and expenditures for hired farm labor and for customwork, contract work and machine hire relate to data obtained in 1964 Census of Agriculture for the farms included in the survey.

Census definition of a farm—For the 1964 Census of Agriculture, the definition of a farm was based primarily on a combination of "acres in the place" and the quantity of agricultural resources on the place or the quantity of agricultural products produced.

The word "place" was defined to include all land under the control or supervision of one person or partnership at the time of enumeration and on which agricultural operations were conducted at any time in 1964. Control may have been exercised through ownership or management; or through a lease, rental, or cropping arrangement.

The computer editing specifications provided for the counting of a place as a farm if the place contained 10 or more acres and met any of the following criteria:

1. 2 or more acres of crop failure.
2. 5 or more acres of cropland pasture or improved other pasture.
3. 10 or more acres of other pasture.
4. 5 or more acres of land in summer fallow.
5. 10 or more acres of other pasture.
6. 50 or more chickens 4 months old or over on the farm.
7. 5 or more hogs and pigs on the farm.
8. 5 or more cattle and calves on the farm.
9. 2 or more milk cows on the farm.
10. 0.2 acres or more of tobacco harvested.
11. 100 or more pounds of tobacco harvested.
12. 0.5 acres or more of vegetables or berries harvested for sale.
13. 0.5 acres or more of land in orchards, vineyards, and planted nut trees.
14. 3 or more acres of hay harvested.
15. 2 or more acres of corn harvested, provided there were no hogs or pigs on the farm.

For places of less than 10 acres the computer editing specifications provided for the counting as a farm if the place met any of the following criteria:

1. 5 or more acres of crop failure.
2. 100 or more chickens 4 months old and over on the farm.
3. 10 or more hogs and pigs on the farm.
4. 10 or more cattle and calves on the farm.
5. 4 or more milk cows on the farm.

6. 0.3 acres or more of tobacco harvested.
7. 500 or more pounds of tobacco harvested.
8. 2 or more acres of vegetables or berries harvested for sale.
9. 2 or more acres of land in fruit orchards, vineyards, or planted nut trees.
10. 5 or more acres of corn harvested provided that there were no hogs and pigs on the farm.

For a more detailed explanation regarding the definition of a farm used for the 1964 Census of Agriculture, reference should be made to the introduction of volume II of the reports for the 1964 Census of Agriculture.

Farm operator—The term "farm operator" is used to designate a person who operates a farm, either doing the work himself or directly supervising the work. He may be the owner, a member of the owner's household, a hired manager, or a tenant, renter, or sharecropper. If he rents land to others or has land worked on shares by others, he is considered as operator only of the land which he retains for his own operation. In the case of a partnership, only one partner is counted as an operator. The number of farm operators is the same as the number of farms.

Farms or operators reporting—Figures for farms represent the number of farms, or farm operators, for which the specified item was reported.

Land in farms—The land to be included in each farm was determined by inquiries on the questionnaire and by instructions to enumerators and farm operators. The farm operators were instructed to report for each farm operator, the number of acres owned, then the number of acres rented or worked on shares, the number of acres managed for others, and lastly, the number of acres rented or leased to others. The acres owned, plus the acres rented or worked on shares, plus acres managed for others, minus acres rented or leased to others was designated as "acres in the place" or "acres in the farm."

Land in farms according to use—Land in farms has been distributed according to the way in which it was used in 1964.

Cropland harvested—This category refers to all land from which any crops were harvested in 1964, whether for home use or for sale. It includes land from which hay (including wild hay) was cut, and land in berries and other small fruits, orchards, vineyards, nurseries, and greenhouses. Matured crops hogged off or grazed were considered to have been "crops harvested" and were reported here. Land from which two or more crops were harvested in 1964 was to be counted only once in the land-use classification. Land used for other purposes either before or after the crops were harvested was to be reported as cropland harvested, without regard to the other uses.

Number of regular hired workers—The count of regular hired farm workers for the 1964 Census of Agriculture included all persons who worked or would work 150 days or more on the farm in 1964. Members of the farm operator's family who worked or would work 150 days or more were to be counted if they worked for pay.

Expenditure for hired labor, 1964—Expenditure for hired labor was to include only cash expenditures. The cost of perquisites furnished to hired labor, such as room, board, house, milk, meat or other farm produced products were not to be included. Payments for housework, contract construction work, and labor connected with custom machine work and contract work such as fruit picking, fruit harvesting, and sugar beet harvesting by a contractor, crew leader or cooperative were not to be included. Payment of wages to members of the farm operator's family and Social Security taxes were to be included.

Machine hire, etc., 1964—The expenditure for machine hire refers to expenditures for custom farmwork such as tractor hire, combining, silo filling, plowing, spraying, fruit picking, etc. Expenditures for cotton ginning were excluded. Expenditures for machine hire were to include the cost of labor, as well as the cost of the hired machines used by the labor. Contract work included payments for such work as fruit picking, berry picking, sugar beet harvesting, etc., performed under a contract with a labor contractor, crew leader or cooperative.

CLASSIFICATION OF FARMS

This report presents detailed data for farms classified by size of farm, age of farm operator, tenure of farm operator, economic class of farm, and type of farm.

Farms by size—Farms were classified by size according to the total land area established for each farm. The same classification was used for all States. According to definition, a farm is essentially an operating unit, not an ownership tract. All land operated by one person or partnership represents one farm. In the case of a landlord who has assigned land to tenants, the land assigned to each tenant is considered a separate farm even though the landlord may operate the entire landholding as one unit in respect to supervision, equipment, rotation practice, purchase of supplies, or sale of products.

Farms by tenure of operator—The classification of farms by tenure of operator was based on data reported for land owned, land rented from others or worked on shares for others, land managed for others, and land rented to others or worked on shares by others.

The various classifications of tenure, as used for the census, are defined below:

1. **Full owners** operate only land they own.
2. **Part owners** operate land they own and also land rented from others.
3. **Managers** operate land for others and are paid a wage or salary for their services. Persons acting merely as caretakers or hired as laborers are not classified as managers. If a farm operator managed land for others and also operated land on his own account, the land operated on his own account and the land managed for others was considered as one farm. If he managed land for two or more employers, all the managed land was considered to be one farm. Farms reporting any managed land were classed as manager-operated only if the land they claimed as managed met at least one of the following conditions:
 1. 1,000 acres or more in the farm.
 2. 10 acres or more in vegetables, berries, or in fruit orchards.
 3. Nursery or greenhouse operations with sales of \$5,000 or more.
 4. Cropland harvested plus land rented to others equaled 200 acres or more.
 5. 50 or more cattle and calves on hand.
 6. 25 or more milk cows on hand.
 7. 1,000 or more chickens or turkeys on hand, sold, or raised.
 8. \$10,000 or more in value of farm products sold in 1964.
4. **Tenants** rent from others or work on shares for others all the land they operate. They are further classified, as described below, on the basis of rental arrangements in regard to the payment of cash rent, sharing of crops, and sharing of livestock or livestock products.
 - a. **Cash tenants** pay cash rent, either on a per-acre basis or for the farm as a whole.

- b. **Share-cash tenants** pay part of the rent in cash and part in a share of the crops and/or of the livestock and livestock products.
- c. **Crop-share tenants** pay a share of the crops but not of the livestock or livestock products.
- d. **Livestock-share tenants** pay a share of the livestock or livestock products. They may or may not also pay a share of the crops.
- e. **Other and unspecified tenants** are those who did not qualify for inclusion in any of the foregoing subclassifications. They may have had the use of land rent-free or in return for a fixed quantity of products, payment of taxes, maintenance of buildings, etc. Unspecified tenants are those for whom the rental arrangement was not reported.

FARMS BY ECONOMIC CLASS

Farms were grouped into two major categories, commercial farms and other farms, mainly on the basis of total value of products sold. In general, all farms with a value of sales amounting to \$2,500 or more were classified as commercial. Farms with a value of sales of \$50 to \$2,499 were classified as commercial if the farm operator was under 65 years of age and he did not work off the farm 100 or more days during the year. The remaining farms with a value of sales of \$50 to \$2,499 were included in one of the three groups of "other farms."

Commercial farms were divided into six economic classes on the basis of the total value of all products sold, as follows:

Class of farm

Large scale ¹	\$100,000 or more
I	\$ 40,000 or more
II	\$ 20,000 to \$39,999
III	\$ 10,000 to \$19,999
IV	\$ 5,000 to \$ 9,999
V	\$ 2,500 to \$ 4,999
VI ²	\$50 to \$2,499

¹Included also in Class I.

²Provided the farm operator was under 65 years of age and he did not work off the farm 100 or more days.

Other farms were divided into three economic classes as follows:

1. **Part-time**—Farms with a value of sales of farm products of \$50 to \$2,499 were classified as "part-time" if the operator was under 65 years of age and he worked off the farm 100 or more days.
2. **Part-retirement**—Farms with a value of sales of farm products of \$50 to \$2,499 were classified as "part-retirement" if the farm operator was 65 years old or over. Many of these are farms on which the income from nonfarm sources was greater than the value of sales of agricultural products.

FARMS BY TYPE

Farms by type—The type of farm represents a description of the major source of income from farm sales. To be classified as a particular type, a farm had to have sales of a particular product or group of products amounting in value to 50 percent or more of the total value of all farm products sold during the year.

The types of farms, together with the products on which type classification is based, are as follows:

	(Products with sales value representing 50% or more of total value of all farm products sold)
Cash-grain	Corn, sorghums, small grains, soybeans for beans, cowpeas for peas, dry field and seed beans and peas.
Tobacco	Tobacco.
Cotton	Cotton.
Other field-crop.	Peanuts, potatoes (Irish and sweet), sugarcane for sugar or sirup, sweet sorghums for sirup, broomcorn, popcorn, sugar beet seed, and pineapples.
Vegetable	Vegetables.
Fruit and nut.	Berries, other small fruits, tree fruits, grapes, nuts, and coffee.
Poultry	Chickens, chicken eggs, turkeys, and other poultry products.
Dairy.	Milk and cream. The criterion of 50 percent of total sales was modified in the case of dairy farms. A farm having value of sales of dairy products amounting to less than 50 percent of the total value of farm products sold was classified as a dairy farm, if— (a) Milk and cream sold accounted for more than 30 percent of the total value of products sold, and— (b) Milk cows represented 50 percent or more of total cows, and— (c) The value of milk and cream sold plus the value of cattle and calves sold amounted to 50 percent or more of the total value of all farm products sold.
Livestock other than poultry and dairy	Cattle, calves, hogs, sheep, goats, wool, and mohair except for farms in the 17 Western States, Louisiana, Florida, and Hawaii, that qualified as livestock ranches.

	(Products with sales value representing 50% or more of total value of all farm products sold)
Livestock ranches	Farms in the 17 Western States, Louisiana, Florida, and Hawaii were classified as livestock ranches if the sales of livestock, wool, and mohair represented 50 percent or more of the total value of farm products sold and if pastureland or grazingland amounted to 100 or more acres and was 10 or more times the acreage of cropland harvested.
General	Field seed crops, hay, grass, and silage. A farm was also classified as general if it had cash income from three or more sources and did not meet the criteria for any other type.
Miscellaneous	Nursery and greenhouse products, forest products, mules, horses, colts, ponies, fur-bearing animals, bees, honey, goat milk, and farms with no value of farm products sold.

Crop-type farms—Crop-type farms include cash-grain, tobacco, cotton, other field-crop, vegetable, fruit and nut, and miscellaneous farms.

Livestock-type farms—Livestock-type farms include poultry; dairy; livestock farms excluding poultry, dairy, and livestock ranches; livestock ranches; and general farms.

DEFINITIONS AND EXPLANATIONS FOR ITEMS IN SURVEY OF FARM WORKERS AND FOR SURVEY OF HIRED FARM WORKERS

Persons working—Persons working includes persons who worked any time during the week. The number of persons includes foreign nationals except for those farms for which all the contract workers were not reported. While data are presented in chapter 2 for persons 10 to 13 years of age, the totals for persons working relate to persons 14 years old and over. Facsimiles of the questionnaires for the two surveys appear on pages 182 to 185.

Hours worked—Farm operators were asked to report hours actually worked. For the survey of farmworkers, farm operators were asked to list by name the persons 10 years old and over living in the house in which the operator lived. If the farm was operated by a partnership, the persons living in the household of the partner were also to be listed. Farm operators were asked not to include housework. For both the survey of farm workers and the survey of hired farm workers, farmwork was to include work in the fields, milking, care and feeding

of livestock and poultry, care and repair of equipment and buildings, keeping farm records, and planning and supervising farmwork. Work off the farm or place was to include only hours worked at jobs for pay.

Area covered—The statistics relate to the 48 conterminous States and to Hawaii. No data were obtained for Alaska as the number of farms and persons working on farms in that State represent only a small fraction of the total for the United States. In a few tables, data are presented for three regions—North, South, and West. The States included in each of these regions are indicated by the map on page 2.

Estimates—All data in this chapter are estimates based upon reports for a sample of farms. The sample used for the survey of farm workers was not the same as that used for the survey of hired farm workers. References should be made to chapters 2 and 3 for a description of the samples used and for measures of sampling errors. The data in many of the tables have been rounded and hence in some cases, the detailed data in the table may not add exactly to the total.

Farm equipment, production practices, and farm production by economic class of farm and by type of farm for 1965—Man-hours of farmwork are directly related to farm production and level of technology. Data regarding farm equipment, farm expenditure for selected items, use of selected production practices, number of livestock and poultry on farms, sales of farm products, and acreage and production of crops for 1965 will be found in part 3, 1965 Sample Survey of Agriculture, volume III of the 1964 Census of Agriculture. Data are presented in part 3 by economic class of farm and by type of farm. Thus, it will be possible to relate hours of farmwork to farm equipment, farm expenditures, production practices, and to farm production by economic class of farm and by type of farm, for approximately the same agricultural year covered by the data on farm workers and hours of farmwork.

Total hours of farmwork by kind of worker—Of the 10.2 billion hours of farmwork almost 71.6 percent were provided by farm operators and members of their household not paid wages and 28.4 percent were provided by persons paid wages and salaries. Farm operators provided almost half of the total hours of farmwork. Wives of farm operators provided one-tenth and other members of the household of the farm operator, not paid wages, provided about one-eighth of the total hours of farmwork.

Kind of worker	Hours of work	
	Total (1,000)	Percent distribution
Total.....	10,211,527	100.0
Persons not paid wages or salary, total..	7,315,565	71.6
Farm operators.....	5,049,126	49.4
Wives of farm operators.....	1,058,361	10.4
Members of household of farm operator related to him.....	1,207,720	11.8
Members of household of farm operator not related to him.....	360	(¹)
Persons paid wages or salary, total.....	2,895,962	28.4
Hired farm workers not members of household of farm operator.....	2,675,558	26.2
Hired farm workers members of farm operator's family.....	220,404	2.2

¹Less than 0.5 percent.

Seasonal distribution of persons working on farms and hours of farmwork—The number of persons working on farms and the hours of farmwork varies greatly with the season of the year, by type of farm, and by economic class of farm. Both the number of persons working on

farms and the hours of farmwork were highest in the summer and lowest in the winter. The total persons working on farms varied by weeks from 4.6 million to 8.0 million and the number of hours of farmwork varied from 127.3 million to 273.9 million.

Hours of farmwork by economic class and type of farm—The hours of farmwork and proportion of the hours of work wages varied greatly by economic class and type of farm.

Classification of farms	Average hours of farmwork per farm	Percent of hours of farmwork by—	
		Persons not paid wages	Persons paid wages
All farms.....	3,194	71.6	28.4
Economic class of farm:			
Large-scale farms.....	26,805	(NA)	100.0
Classes I and II excluding large-scale farms.....	6,470	56.4	43.6
Class III.....	4,733	80.9	19.1
Class IV.....	3,868	87.5	12.5

Livestock ranches.....	3,808	62.2	37.8
General farms.....	4,160	70.8	29.2
Miscellaneous farms.....	4,552	36.4	63.6

NA Not available.

Persons not paid wages provided 72 percent of the hours of farmwork on all farms. However, for farms in economic classes I and II, cotton farms and other field-crop farms, persons not paid wages furnished from 40 to 60 percent of the hours worked at farmwork. On cash-grain farms; dairy farms; livestock farms other than poultry, dairy, and livestock ranches; farms in economic classes III, IV, V, and VI, part-time farms and part-retirement farms, persons not paid wages provided four-fifths or more of the total hours of farmwork. On fruit and nut and vegetable farms, hired workers provided more than four-fifths of the total hours of farmwork.

Hours of farmwork not included in tables—The 10.2 billion hours worked on farms by all persons given in table 1 do not include hours worked by members of the household of the farm operator on the following groups of farms:

1. Farmwork by persons not paid wages on large-scale farms and farms other than large-scale farms with an expenditure of \$10,000 and over for hired farm labor in 1964, and abnormal farms. The total hours worked at farmwork by farm operators and members of their households for this group of farms are estimated at 251 million. (The totals in table 1 do not include hours of farmwork performed by persons 10 to 13 years of age. For hours worked by persons 10 to 13, see page 60.)
2. Hours worked by hired workers on large-scale farms with an expenditure for hired farm labor of less than \$10,000 in 1964. The hours worked by hired farm workers on these farms is estimated as 71 million.

3. Hours worked by contract workers not included in totals for hours worked by hired farm workers on farms. It is estimated that the total hours worked by these contract workers did not exceed 80 million.

The totals given do not include approximately 402 million hours worked at farmwork for the three groups listed above. The total hours worked by all persons, and hours worked by persons not paid wages given in table 1 represent an understatement of approximately 4 percent for each of these groups. The total hours

worked by hired farm workers given in table 1 represent an understatement of approximately 6 percent.

Persons working and hours of work for farms of non-white farm operators in the South—The size of the sample was too small to provide very much data for farms of nonwhite operators in the South. The data in the following table related only to farms with an expenditure of less than \$10,000 for hired farm labor in 1964, and do not include data for any large-scale or for abnormal farms.

Subject	Persons in households of farm operator						
	Total, all persons 14 years old and over	Farm operators	Wives of farm operators	Other members of household of farm operator	Other members of household of farm operator not related to head of household	Hired workers members of household of farm operator	Hired workers not members of household of farm operator

Volume III—Part 2—Chapter 2

CONTENTS

	page
Introduction	57
Definition of a farm.....	57
Persons in household of farm operator	57
Hours of work	57
Age of persons working	57
Economic class of farm	57
Type of farm.....	57
Description of sample	57
Collection of data	57
Office processing	58
Method of estimation	58
Sampling errors.....	58
Persons in household of farm operator	58
Total hours of work by members of households of farm operators	58
Members of household by ratio of hours of farmwork to total hours worked	59
Persons working and hours worked by economic class of farm	59
Persons working and hours worked by age and sex	59
Persons working and hours worked by type of farm	59
Persons working and hours worked at farmwork by age	59
Farms by kind of farm labor.....	60
Hours worked by persons 10 to 13 years old	60
Persons and hours of work for farms not included in tables	60

TABLES

TABLE	1. Persons in Household of Farm Operator—Farms, Land in Farms, and Cropland Harvested, by Tenure of Operator, by Size of Farm, by Economic Class of Farm in 1964	63
	2. Persons in Household of Farm Operator—Farms, Land in Farms, and Cropland Harvested, by Tenure of Operator, and by Size of Farm, by Type of Farm in 1964.	64

Chapter 2. Employment of Persons in Household of Farm Operators

Introduction--This chapter contains data regarding persons in the households of farm operators, their hours of work at farmwork, and at work off the farm. The data relate directly to the households of 3,075,000 of the farm operators included in the 1964 Census of Agriculture. The data presented exclude the households of operators of large-scale farms, abnormal farms, and operators of farms with an expenditure of \$10,000 or more for hired farm labor in 1964. The chapter also contains data on the number of hired farm workers and their hours of work for the 3,075,000 farms.

The data presented in this chapter indicate the extent of the employment of members of the household of the farm operator at farmwork and at jobs off the farm operated, and the employment of hired farm workers on the 3,075,000 farms. The data indicate the age distribution for members of the farm operator's household, the seasonal distribution for hours at farmwork and at jobs off the farm, and the extent of full-time employment of members of the households of the farm operators. Most of the data are presented by economic class of farm and type of farm.

Definition of a farm--The farms for this survey were selected from farms counted in the 1964 Census of Agriculture. See page 8 for the farm definition.

Persons in household of farm operator--The farm operator was asked to list for each reporting period the name of each person 10 years old and over living in his household. Persons in the household include not only members of the farm operator's family living in the household but also relatives, hired workers, and others.

Hours of work--The farm operator was asked to report for each weekly reporting period the hours worked at farmwork and at jobs off the farm. Farmwork was to include work in fields, milking, care and feeding of livestock and poultry, care and repair of equipment and buildings, keeping farm records, and planning and supervising farmwork.

Age of persons working--The data in all except a few tables relate to persons 14 years old and over. (There are a few tables relating to persons 10 to 13 years of age.)

Economic class of farm--The farms included in this survey were assigned to the economic class in which they were classified in the 1964 Census of Agriculture. See page 9 for a description of the economic classes of farms for the 1964 census.

Type of farm--The farms were assigned to the same type of farm group in which they were classified in the 1964 Census of Agriculture. The farms in each type of farm group include not only commercial farms, but also part-time and part-retirement farms. For a description of the types of farms, see page 10.

Description of sample--The sample used for the survey of farm workers was selected from 447 primary sampling units consisting of counties (or pairs of adjacent counties). Sampling units were assigned probabilities on the basis of the total value of farm products sold in 1959 for farms with a value of farm products sold of less than \$100,000.

The farms to be included in the survey of farm workers were selected systematically in pairs of farms from farms included in the 1964 Census of Agriculture in the primary sampling units; the selection rate within each primary sampling unit was inversely proportional to the probability of selection of the primary sampling unit.

The sample overall sampling rate was one in 418.5. Abnormal farms (farms operated by institutions, Indian reservations, etc.) were excluded from the sample. Also farms with a total value of farm products sold of \$100,000 or more and all farms with an expenditure of \$10,000 or more for hired farm labor were excluded from the sample, as these two groups of farms were to be included in the survey of hired farm workers.

Because it was desired to publish estimates by type of farm, farms with 5 or more acres of land in fruit orchards, or with 200 fruit trees, or with 2 or more acres of berries were sampled at the rate of one out of 139.5; and farms with 10 or more acres of vegetables, or \$1,000 or more from the sale of vegetables, or horticultural specialty products were sampled at the rate of one out of 104.6. Higher sampling rates were required for these types of farms because the overall sampling rate of 1 in 418.5 would not have provided a large enough sample.

Tables 1 and 2 provide estimates for 1964 for the farms included in the survey for the number of farms, land in farms, and cropland harvested, by economic class of farm, type of farm, size of farm, and tenure of farm operator.

Collection of data--The questionnaire used for the survey asked for persons working and hours worked for a period of one week. (See page 184 for a copy of the questionnaire.) The sample was divided into five panels and the farm operators in each panel were asked to fill a questionnaire once during each 4 or 5-week period. The sample was divided into five panels in order to obtain data for every week during a 1-year period. Questionnaires were mailed to farm operators in each panel once every 4 weeks. Exception: Questionnaires were mailed to two panels for 12 selected weeks--March 21-27, April 18-24, May 23-29, June 20-26, July 18-24, August 22-28, September 19-25, October 24-30, November 21-27, December 19-25, January 23-29, and February 20-26. The date of mailing was such that the questionnaire would be received by the farm operator on the Saturday that ended the weekly reporting period. Farm operators were asked to fill out and mail the questionnaire on the Monday following the end of the reporting period. Farm operators from whom filled questionnaires had not been received by the end of Wednesday following the weekly reporting period were telephoned on Thursday, Friday, and Saturday and the information for filling the questionnaire was obtained by telephone by a trained interviewer. Between 76 and 80 percent of the questionnaires were obtained by mail and the remaining 20 to 24 percent were obtained by telephone, or in a small number of cases by a personal visit by an interviewer.

The first week covered by the survey was the week ending March 27, 1965, and the last, March 19, 1966. Thirteen weekly reports were obtained from 79.9 percent of the farm operators and 12 weekly reports were obtained from 20.1 percent of the farm operators.

Reports for all required weeks were obtained for all farms. For a few farms (less than 30) the information for the questionnaire for one or more weeks was estimated on the basis of the questionnaires for other weeks for the same farm.

Office processing--Selected data (acres in farm, acres of cropland harvested, etc.) for each farm included in the survey were available from the 1964 Census of Agriculture and these data were used in checking the data reported on each questionnaire. Approximately one-half of the farms were also included in the 1965 Sample Survey of Agriculture. At the end of the last survey period, the questionnaires for the 12 or 13 reporting periods for each farm were reviewed for consistency. When available the questionnaire for the 1965 Sample Survey of Agriculture was used for detecting problems or inconsistencies. Punch cards were prepared for the reports for each farm and the punching of these cards was verified 100 percent and all errors found were corrected. The punch cards were checked by a computer to determine that all cards for the 12 or 13 reporting periods were in the file, that all codes and other information required for each farm were present and consistent. All reports for 100 or more hours of work for a week for any persons 14 years old and over were checked and all reports of 40 or more hours of work for a week for persons 10 to 13 years of age were checked. All errors found as a result of the check by computers were corrected and the corrections verified.

The tabulations were reviewed by an agricultural statistician for reasonableness, consistency, etc. All tabulation procedures were tested before they were used.

Method of estimation--Estimates were prepared by assigning weights to each farm for each week. Weights were assigned separately to the farms in each region and within each region to farms in economic class I and to all farms not in economic class I. The weights for all farms except those selected on the basis of the special criteria for fruit or vegetable acreage or sales were determined by taking the ratio of the number of farms included in the sample to the number of farms in the corresponding category for the 1964 Census of Agriculture.

The weights assigned to farms in economic class I varied from 311 to 472, and from 412 to 466 for farms in other economic classes. Farms sampled on the basis of acres of fruit, etc., were assigned a weight of 139.5 and those sampled on the basis of acres of vegetables, etc., were assigned a weight of 104.6.

Adjustments in weights were made when making estimates for the weeks for which reports were obtained from two panels. Estimates of hours worked for 52 weeks were made by multiplying the totals for 13 weekly reporting periods by 4. (Changes in weights were made to adjust totals for farms from which reports were obtained for only 12 weeks so that the totals for these farms would represent totals for 52 weeks.)

Sampling errors--Estimated totals for data for all items are subject to sampling errors. Approximate measures of sampling errors for selected items may be obtained from tables 75 and 76.

Tables 75 and 76 show percentage limits such that the chances are 2 out of 3 that the difference between an estimate based wholly or in part on a sample of farms and the figure that would have been obtained if the information had been collected for all farms would be no more than the percentage specified. The chances are about 99 out of 100 that the difference would be less than $2\frac{1}{2}$ times the percentage given in tables 75 and 76.

Sampling errors were calculated by a random group method. In each region, each farm was assigned at random to one of 10 groups. The sampling errors shown in tables 75 and 76 are relative errors, obtained by taking the square root of the relative variance. The sampling errors in tables 75 and 76 may be overstated because no adjustments were made to take into account (1) the fact that major parts of the sample were selected within a sample of counties and the random group method of calculation would overstate the between county part of the variance and (2) that the estimates are ratio estimates as weights were assigned to individual farms so as to make the number of farms for selected groups equal to the number of farms in 1964 for the corresponding groups. For characteristics related to number of farms, the variances might be reduced by the ratio estimate; for other characteristics (aggregates such as cropland harvested, etc.), the ratio adjustment would have little effect on the variance.

Persons in household of farm operator--The count of persons in the household of the farm operator includes only persons 10 years old and over. The average number of persons per household and the distribution of households by number of persons vary by economic class of farm and by type of farm. The average number of persons per household is lowest for part-retirement farms and livestock ranches and highest for farms in economic classes I and II and other field-crop farms. Almost three-fourths of the households of the part-retirement farms consist of one or two persons. More than three out of five other field-crop farms had four or more persons in the household, while less than one out of three livestock ranches had four or more persons in the household.

Total hours of work by members of households of farm operators--There are significant variations in the number of hours worked during the 52 weeks by members of the households of farm operators. Of the 3,075,000 farm operators, 104,000 reported 0 hours of work for farm and off-farm work during all of the 13 weeks for which information regarding hours worked was obtained; an additional 84,000 reported 0 hours of farmwork; and 340,000 reported less than 800 hours of farmwork. Of the 7.1 billion hours worked by farm operators, 5.8 billion hours were worked by farm operators who worked 2,000 or more hours during the year.

A large proportion of the hours of work off farm was reported by persons working 2,000 hours or more during the year. Over 80 percent of the hours of work off the farm by the head of the household, one-third of the hours of work off the farm by wives of farm operators, and almost two-thirds of the hours of work off the farm by persons related to the farm operator (excluding wives) were reported by persons working 2,000 or more hours at all types of work during the year.

More than four-fifths of the hours of work off the farm by farm operators were reported by the 912,000 farm operators who spent more hours at work off the farm than at farmwork. These 912,000 farm operators reported an average of less than 11 hours per week at farmwork during the 52 weeks.

More than 2,171,000 wives of farm operators reported hours worked on and/or off the farm. Of the 1.8 billion hours worked by these wives, approximately three-fifths were spent at farmwork and two-fifths at work off the farm. About 95 percent of the hours of work off the farm were reported by the 627,000 wives of farm operators for whom the hours of work off the farm represented more than half of the total hours they worked. Hours of farmwork were reported by 56 percent of these 627,000 wives and the hours of farmwork for the wives reporting any hours of farmwork averaged 4 hours per week.

Approximately 85 percent of the hours of work at farmwork by wives was reported by the 1,407,000 wives for whom the ratio of hours of farmwork to total hours worked was 90 percent or more. Only 4 percent of these 1,407,000 wives performed any work off the farm and the hours of off-farm work by these 3 percent averaged 1 hour per week.

Related persons, other than wives, in the household of the farm operator reported one-fifth of the total hours of work, 18 percent of the hours of farmwork, and 24 percent of the hours worked off the farm reported by farm operators and related members of their households. Almost three-fifths of the 2.2 billion hours worked by related members of the farm operator's household, excluding hours worked by wives, were worked at farmwork. Over three-fifths of the hours of farmwork were reported by the approximately 683,000 related members for whom the ratio of hours of farmwork to total hours of work was 90 or over. Only one out of seven of these 683,000 reported any work off the farm and the hours of work off the farm by those reporting work off the farm averaged only 2 hours per week.

Members of household by ratio of hours of farmwork to total hours worked--The head of the household, his wife, and other members of the household related to the farm operator worked 11,101 million hours during the 52-week period. Of this total 7,441 million hours or 67 percent was spent at farmwork. Of the 7,441 million hours of farmwork, 5,074 million hours or 68 percent was performed by the head (or farm operator), 1,061 million by wives, and 1,306 million by other members of the farm operator's household related to him. Hours worked off the farm by the head, wife, and other members of the farm operator's household related to him totaled 3,660 million. Of this total, 55 percent were reported by the head or farm operator, 21 percent by the wife, and 24 percent by other members of the household of the farm operator related to him.

More than one-sixth of the 3,660 million hours of work off the farm was performed by the head and related members of the farm operator's household, who did not perform any farmwork. More than 60 percent of the work off the farm was reported by the head and related members of the farm operator's household for whom the off-farm work comprised 75 percent or more of the total hours worked and 86 percent of the work off farm was reported by farm operators and related members of their households, who reported that less than half of their total hours of work was on the farm operated.

More than four-fifths of the hours worked at farmwork were performed by farm operators and related members of their households for whom the reported hours of farmwork represented 75 percent of the total hours of work on and off the farm. Almost three-fourths of all hours of farmwork by farm operators and related members of their households for whom the ratio of hours of farmwork to total hours of work was 90 or over.

On the other hand, over four-fifths of the hours of work off the farm were reported by the approximately 510,000 related members (excluding wives) of the households of the farm operators for whom the ratio of hours at farmwork to the total hours worked was less than one-half. Slightly more than two-thirds of these 510,000 persons reported any hours of farmwork and the hours of farmwork for those reporting farmwork averaged less than 9 hours per person per week.

Persons working and hours worked by economic class of farm--Both the proportion of persons 14 years old and over working, and the average hours worked per week varied significantly by economic class of farm. For example, more than 68 percent of the persons 14 years old and over and members of the households of farm operators of farms in economic classes I and II worked

during the year and the average hours worked per week for the persons working was 42.6 hours. On the other hand, 45 percent of the persons 14 years old and over, and members of the household of the farm operator on part-retirement farms worked during the year and the average hours worked per week for the persons working was 21.8 hours per week. The average hours worked off the farm per week for the persons working off the farm varied from 34 to 39 hours. The average hours worked off the farm for part-time farms was 39 or about 9 percent higher than for other economic classes of farms.

The average hours worked on the farm per week varied from 16 hours for part-time farms to 43 hours for persons on farms in economic classes I and II.

Economic class	Percentage of persons 14 years old and over working	Average hours worked per week for persons doing farmwork
Classes I and II.....	68.3	42.6
Class III.....	72.2	40.0
Class IV.....	72.2	36.8
Class V.....	66.2	29.8
Class VI.....	59.5	26.2
Part-time farms.....	63.8	15.6
Part-retirement farms.....	45.0	21.8

Persons working and hours worked by age and sex--The percentage of persons working varied greatly by age and sex. About half the persons 14 and 15 years of age, persons 65 years old and over, and female persons worked at farmwork or at work off the farm. The average number of hours worked per week for persons 14 and 15 years of age and for females was less than 26.

Age or sex	Percent of persons 14 years old and over			Average hours worked per week		
	Working	Working at farmwork	Working off farm	Total	At farmwork	Off the farm
14 and 15 years..	54.7	52.7	5.0	18.7	17.7	18.0
16 and 17 years..	57.5	49.7	13.9	24.0	20.9	24.4
18 to 24 years...	66.9	42.1	36.9	39.1	29.1	37.7
25 to 34 years...	71.6	57.1	29.9	42.8	33.4	38.6
35 to 44 years...	74.8	59.4	32.7	44.6	35.0	38.4
45 to 54 years...	74.1	61.5	27.7	44.3	36.3	38.0
55 to 64 years...	65.6	57.1	19.6	41.2	34.9	36.3
65 years and over	41.2	39.3	4.1	29.9	28.0	31.5
Male.....	82.2	71.4	29.5	46.2	37.5	38.1
Female.....	46.7	34.8	15.5	25.6	19.2	34.1

Persons working and hours worked by type of farm--The proportion of persons 14 years old and over working, and the average hours worked per week varied by type of farm. The proportion of persons working at farmwork was higher for livestock-type farms and the average hours of work per week was highest for the livestock-type farms.

Type of farm	Percent of persons 14 years old and over		Average hours worked per week worked at farmwork per person working
	Working	Working at farmwork	
Cash-grain farms.....	62.5	50.7	33.4
Tobacco farms.....	64.2	52.0	27.2
Cotton farms.....	54.5	42.7	29.1

55 to 64 years.....	1,380,386	17.4	34.9
65 years old and over.....	571,684	7.2	28.0

Farms by kind of farm labor--The classification of farms by kind of labor given in table 7 excludes the 31,000 farms (large-scale farms) with value of farm products of \$100,000 and over and the 24,000 other farms with an expenditure of \$10,000 or more in 1964 for hired farm labor. The farms excluded represent farms on which hired farm workers provided most of the hours of farmwork.

There were 0 hours of farmwork reported for any member of the household of the farm operator for approximately 100,000 farms. While these places are included in the count of farms, they do not contribute to the number of persons working on farms or to the total hours of farmwork. They do, however, contribute about 3 percent to the totals for persons in the households of farm operators and a smaller percent to the totals for persons working off the farm for pay and for the totals for hours of work off the farm.

Of the 2,969,000 farms with any farm labor reported, 1,530,000 had hours worked by hired farm workers. The hired farm workers were members of the farm operator's household on 93,000 farms and were hired workers not members of the farm operator's household on 1,397,000 farms. The hours of farmwork provided by all hired workers totaled 1,729 million and were equivalent to 19 percent of the total hours of farmwork on the 2,969,000 farms having any farm labor.

Hours of work at farmwork and/or at work off the farm were reported for households of 2,971,000 farm operators. Of these 2,971,000 farm operators, 2,887,000 reported work on the farm, 5,074 million hours worked at farmwork, and 1,998 million hours at work off the farm. Of the 2,971,000 farm operators, 1,595,000 or 54 percent reported work off the farm.

Hours worked were reported for the wife for 2,171,000 farm operators. The hours worked by wives totaled 1,840 million and were equivalent to 16 percent of the

hours worked by all members of the farm-operator households. Wives worked 1,061 million of the 7,533 million hours worked at farmwork reported for all members of the farm-operator households. Hours of work off the farm were reported for wives of 814,000 farm operators and hours worked off the farm by wives were equivalent to 21 percent of the hours worked off the farm by all members of the farm-operator households.

There were 3,013,000 farms with hours worked reported by the farm operator and members of the household related to him. On 383,000 of these farms, a related member of the household of the farm operator reported farmwork for pay on the farm operated. The hours of farmwork for pay totaled 226 million and were equal to 2 percent of the hours of farmwork performed by farm operators and members of their households. Work off the farm by related members in the household of the farm operator was reported for 2,079,000 of the 3,075,000 farm operators. The hours of off-farm work totaled 3.7 billion and were equivalent to 33 percent of the total hours worked off the farm by all members of the households of farm operators.

Hours worked by persons 10 to 13 years old-- Almost half of the persons 10 to 13 years old in the households of farm operators performed some farmwork during the 52-week period. An average per week of approximately 545,000 persons 10 to 13 years of age worked one or more hours at farmwork during the year. The hours worked at farmwork by these persons totaled 385 million and this total was equal to 5.1 percent of the total hours of farmwork performed by all persons 14 years old and over in the households of farm operators. The number of persons 10 to 13 years of age working at farmwork was lowest during the winter and highest during June and July. Hours worked at farmwork during each week in July were almost 3 times the number of hours worked at farmwork during each week in February. More persons 10 to 13 years old worked on dairy farms than on any other type of farm. Persons 10 to 13 working on dairy farms comprised 22.8 percent of the persons 10 to 13 working at farmwork on all types of farms and the hours worked at farmwork by this group of persons on dairy farms represented 27.1 percent of the hours worked at farmwork by all persons 10 to 13 years old.

Persons and hours of work for farms not included in tables--The data in this chapter do not include persons and hours of work for the following group of farms:

1. Farms with a value of farm products sold of \$100,000 or more (large-scale farms). There were 31,401 of these farms in 1964. Information on number of farm operators and their hours of farmwork and number of other persons in the household of the farm operator and their hours of farmwork were collected and tabulated for a sample of these farms except for the 1,800 farms having an expenditure for hired farm labor of \$100,000 or more in 1964. The estimate for persons working and hours of farmwork during the 52-week period from March 20, 1965 to March 19, 1966 are as follows:

Subject	Farms with expenditure for hired farm labor of less than \$100,000 in 1964		Farms with expenditure for hired farm labor of \$100,000 or more in 1964	
	Average number of persons working per week	Hours of farmwork (1,000)	Estimated average number of persons working per week	Estimated hours of farmwork (1,000)
Total.....	54,100	127,972	3,600	8,330
Farm operators.....	29,600	84,656	1,800	5,148
Members of household of farm operator.....	24,500	43,316	1,800	3,182

The data for the farms with an expenditure for hired farm labor of \$100,000 or more have been estimated on the basis of the reports for large-scale farms with an expenditure of less than \$100,000 for hired farm labor.

2. Farms other than large-scale farms with an expenditure for hired farm labor of \$10,000 or more in 1964. These farms totaled 24,300. On the basis of the averages for large-scale farms with the same level of expenditure for hired farm labor, the estimated average weekly number of persons working on these farms and the total hours of farmwork for these persons for the 52-week period from March 20, 1965 to March 19, 1966 are as follows:

Subject	Estimated average weekly number of persons doing farmwork	Estimated total hours of farmwork performed (1,000)
Total.....	44,420	105,100
Farm operators.....	24,300	69,500
Members of household of farm operator....	20,120	35,600

3. Abnormal farms. In 1964 the total number of abnormal farms was 2,200. The number of persons working and the hours of farmwork performed by the farm operators on these abnormal farms during the 52 weeks, March 20, 1965 to March 19, 1966 are estimated as follows:

Subject	Average weekly number of persons doing farmwork	Total hours of farmwork performed (1,000)
Total.....	4,022	9,513
Farm operators.....	2,200	6,292
Members of household of farm operator....	1,822	3,221

The totals given do not include approximately 650 million hours worked at farmwork for the three groups listed above. The total hours worked by all persons, hours worked by persons not paid wages and the total hours worked by hired workers given in tables 1 to 72 represent an understatement of approximately 5 percent for each of these groups.

The estimates for the three groups listed above total:

Subject	Average weekly number of persons doing farmwork	Total hours of farmwork performed (1,000)
Total.....	106,142	250,915
Farm operators.....	57,900	165,596
Members of household of farm operator....	48,242	85,319

The farm operators working and other members of the farm operator's household working, not included in the totals for tables 1 to 72 were equivalent to approximately 3 percent of the persons included in the tables. The total hours of farmwork by farm operators and members of farms operator's household not included in totals in tables 1 to 72 were equivalent to approximately 3 percent of the totals for this item in these tables.

Table 1. PERSONS IN HOUSEHOLD OF FARM OPERATOR—FARMS, LAND IN FARMS, AND CROPLAND HARVESTED, BY TENURE OF OPERATOR, BY SIZE OF FARM, BY ECONOMIC CLASS OF FARM IN 1964

Subject	All farms			Class I and II farms			Class III farms			Class IV farms

Volume III-Part 2-Chapter 3

CONTENTS

	page
Introduction.....	143
Definition of a farm.....	143
Hours of work.....	143
Economic class of farm.....	143
Type of farm.....	143
Explanation and definitions for items for the 1964 Census of Agriculture.....	143
Description of sample.....	143
Collection of data.....	143
Office processing.....	143
Method of estimation.....	143
Sampling errors.....	144
Total number of hired farmworkers and hours of work.....	144
Number of hired farmworkers and hours of work by economic class of farm.....	144
Hired workers by period of payment.....	144
Number of hired farmworkers and hours worked by type of farm.....	144
Number of hired farmworkers and hours worked for farms classified by total hours worked by hired workers.....	145
Number of hired workers and hours of work not included in tables 1 to 28.....	145

TABLES

TABLE 1. Hired Farm Workers—Land in Farms, Cropland Harvested, Expenditures for Hired Labor, Number of Regular Hired Workers, and Expenditures for Machine Hire in 1964, for Farms Classified by Total Hours Worked by Hired Workers, Tenure of Farm Operator, Size of Farm, and by Expenditures for Hired Labor, by Economic Class of Farm.....	147
2. Hired Farm Workers—Land in Farms, Cropland Harvested, Expenditures for Hired Labor, Number of Regular Hired Workers, and Expenditures for Machine Hire in 1964, Classified by Total Hours Worked by Hired Workers, Tenure of Farm Operator, Size of Farm, and by Expenditures for Hired Labor, for all Farms.....	148
3. Hired Farm Workers—Farms, Average Number of Hired Farm Workers Per Week and Hours Worked by Hired Farm Workers for Farms Classified by Total Hours Worked by Hired Farm Workers, Tenure of Farm Operator, Size of Farm, and Expenditures for Hired Farm Labor, by Economic Class of Farm.....	152

Chapter 3. Hired Farm Workers for Farms With \$10,000 or More Expenditure for Hired Labor

Introduction--This chapter contains data for the number of hired farm workers and hours of farmwork by them for the 44,000 farms with an expenditure of \$10,000 or more for hired farm labor in 1964. The data shown provides the number as well as the hours worked at hired farmwork by weeks, by economic class, and by type of farm.

Definition of a farm--The farms for this survey were selected from farms counted in the 1964 Census of Agriculture. See page 8 for the farm definition.

Hours of work--The farm operator was asked to report for each weekly reporting period, the hours worked at farmwork by hired farm workers on the farm. Farmwork was to include work in the fields, milking, care and feeding of livestock and poultry, care and repair of equipment and buildings, keeping farm records, and planning and supervising farmwork. Persons not receiving wages or salaries and their hours of farmwork are not included.

Economic class of farm--The farms included in this survey were assigned to the economic class in which they were classified in the 1964 Census of Agriculture. See page 9 for a description of the economic classes of farms for the 1964 census.

Type of farm--The farms were assigned to the same type of farm group in which they were classified in the 1964 Census of Agriculture. The farms in each type of farm group include not only commercial farms, but also a few part-time and part-retirement farms. For a description of the types of farms, see page 10.

Explanation and definitions for items for the 1964 Census of Agriculture--The data for land in farms, cropland harvested, expenditures for hired farm labor, number of regular hired workers, expenditure for machine hire, farms by tenure of operator, and farms by size are estimates for 1964 for the farms included in the survey. For explanations and definitions regarding these items, see pages 8 and 9.

Description of sample--The sample used for the special survey of hired farm workers was selected almost entirely from farms having a farm expenditure of \$10,000 or more for hired farm labor, in 1964. Abnormal farms were excluded from the survey.

The sampling rate varied according to expenditures for hired farm labor in 1964. The sampling rates were as follows:

<i>Expenditures for hired farm labor</i>	<i>Sampling rate</i>
\$100,000 or more.	1 out of 1
\$50,000 to \$99,999	1 out of 3
\$20,000 to \$49,999	1 out of 10
\$10,000 to \$19,999	1 out of 20

The sample of farms with an expenditure of \$100,000 or more for hired farm labor, was selected from all counties and included, in addition, any farms with an expenditure of \$100,000 or more for hired farm labor in 1959. The sample of farms with an expenditure of \$10,000 to \$99,999 for hired farm labor was selected from 508 primary sampling units comprising 1,388 counties.

Collection of data--The questionnaire used for the survey (see page 184) asked for the number of hired farmworkers and hours of work for each week. The questionnaire asked also the number of hired farm workers employed by period of payment and also for information as to whether contract workers and their hours of work were included in the report.

Each questionnaire covered a period of 4 or 5 weeks and 12 questionnaires covering a period of 52 weeks (April 1965 to March 1966) were obtained from each farm. The questionnaires were mailed to each farm at the end of each 4 or 5-week reporting period.

During the survey period, approximately 80 percent of the required reports were obtained by mail. After the end of the reporting period, reports that had not been obtained by mail were obtained by telephone by an experienced interviewer or by a personal visit by an experienced interviewer.

Office processing--Each farm included in the survey was also included in the 1964 Census of Agriculture and in the 1965 Sample Survey of Agriculture. The review of data for each farm was performed largely by four agricultural statisticians. For the review of the data on each questionnaire, the questionnaire for the 1964 Census of Agriculture and the questionnaire for the 1965 Sample Survey of Agriculture were matched to the hired farm labor questionnaire and the information on all three questionnaires was used for the review.

The punching of cards for the information on the questionnaire was verified 100 percent and all errors found were corrected.

The punched cards were checked by a computer to determine that all cards for the 12 reporting periods were in the file, that hours worked each week did not exceed 100 times the number of workers, and that all codes and other information required for each farm were present and consistent. Errors found were corrected.

The tabulations were reviewed by an agricultural statistician for reasonableness, consistency, etc. All tabulation procedures were tested before they were used.

Method of estimation--The sample for this survey was selected from the questionnaires for the 1964 Census of Agriculture. At the time of the sample selection, the questionnaires for the 1964 Census of Agriculture had not been obtained or were not complete for approximately 30 percent of the farms having an expenditure for hired farm labor of \$10,000 or more. Therefore, the method of estimation was devised to make adjustment for not only the sampling rate but also for the incompleteness of the sample.

Each farm included in the sample was assigned a weight; the weight was determined by taking the ratio of the number of farms in the group according to the 1964 Census of Agriculture to the number of farms in the corresponding group in the sample. The weights were determined separately for each of the three regions, for each of the three groups of farms by economic class,

for four groups of farms grouped by amount of labor expenditure for 1964, and for each type of farm. The following table shows the number of farms for which

questionnaires were obtained and the number of farms included in the 1964 census by farm labor expenditure groups, by economic class of farm, and by type of farm.

Subject	Number of farms (according to the 1964 Census of Agriculture) with an expenditure for hired farm labor of—					Number of farms for which labor survey questionnaires were obtained, by expenditure for hired farm labor in 1964				
	Total	\$100,000 and over	\$50,000 to \$99,999	\$20,000 to \$49,999	\$10,000 to \$19,999	Total	\$100,000 and over	\$50,000 to \$99,999	\$20,000 to \$49,999	\$10,000 to \$19,999
All farms.....	44,478	1,812	3,520	13,128	26,018	34,506	1,325	2,837	9,569	20,875

Livestock farms other than poultry, dairy, and livestock ranches.....	3,744	106	180	1,000	2,458	2,811	68	162	874	1,707
Livestock ranches.....	2,720	40	167	854	1,659	2,418	26	90	781	1,521
General.....	3,273	120	240	940	1,973	2,263	98	189	675	1,301
Miscellaneous.....	4,731	372	669	1,537	2,153	2,759	262	443	833	1,221

Sampling errors--Estimated totals for data for all items are subject to sampling errors. Approximate measures of sampling errors for selected items may be obtained from table 28.

Table 28 shows percentage limits such that the chances are 2 out of 3 that the difference between an estimate based wholly or in part on a sample of farms and the figure that would have been obtained if the information had been collected for all farms would be no more than the percentage specified. The chances are about 99 out of 100 that the difference would be less than 2 1/2 times the percentage given in table 28.

Sampling errors were calculated by a random group method. In each region, each farm (except those large farms which were all included in the survey of hired farm workers) was assigned at random to one of 10 groups. The sampling errors shown in table 28 are relative errors, obtained by taking the square root of the relative variance. The sampling errors in table 28 may be overstated because no adjustments were made to take into account (1) the fact that major parts of the sample were selected within a sample of counties and the random group method of calculation would overstate the between county part of the variance and (2) that the estimates are ratio estimates as weights were assigned to individual farms so as to make the number of farms for selected groups equal to the number of farms in 1964 for the corresponding groups. For characteristics related to number of farms, the variances might be reduced by the ratio estimate; for other characteristics (aggregates such as cropland harvested), the ratio adjustment would have little effect on the variance.

Total number of hired farm workers and hours of work--The 44,000 farms included in the hired farm labor survey had an average of 505,000 hired farm workers per

week. These farms had 31 percent of the hired farm workers on all farms. The hours worked by hired farm workers on these 44,000 farms totaled 1.2 billion and represented 44 percent of the hours worked by hired farm workers on all farms.

Number of hired farm workers and hours of work by economic class of farm--About 70 percent of the hired farm workers and hours worked were on large-scale farms. Almost two-thirds of the hired farm workers and the hours worked were on the 3,500 large-scale farms having 50,000 or more hours of hired farmwork during the year. One-fifth of the total hours of farmwork performed by hired farm labor were performed on these 3,500 farms. The 16,000 large-scale farms with 10,000 or more hours of hired labor had almost one-third of the hours of hired farm labor on all farms.

Hired workers by period of payment--Most of the farms with hired farm workers and a large proportion of the hired workers are paid on a time basis, i.e. by the month, week, day or hour.

Period of payment	Farms		Average weekly number of hired workers	
	Number	Percent distribution	Number (1,000)	Percent distribution
Monthly.....	23,914	54.4	72	14.2
Weekly.....	38,293	41.6	52	10.1
Daily.....	15,109	24.3	60	12.0
Hourly.....	31,479	71.6	246	48.8
Piece rate.....	13,363	30.4	74	14.7

Some farms have workers paid on more than one period or basis; and consequently, the distribution of farms by period of payment exceeds the total number of farms.

Number of hired farm workers and hours worked by type of farm--The distribution of hired farm workers and hours worked by type of farm were as follows:

Type of farm	Farms	Average number of hired farm workers per week		Hours worked by hired farm workers		Regular hired workers in 1964	
		Total (1,000)	Percent distribution	Total (1,000)	Percent distribution	Total (1,000)	Percent distribution
Total.....	43,989	505	100.0	1,166,111	100.0	428	100.0
Cash-grain farms.....	2,561	15	2.9	38,373	3.3	14	3.3
Tobacco and miscellaneous farms.....	4,849	72	14.3	158,708	13.6	67	15.7
Cotton farms.....	5,813	72	14.3	165,439	14.2	62	14.5
Other field-crop farms.....	3,306	47	9.3	108,296	9.3	42	9.8
Vegetable farms.....	3,389	75	14.9	154,831	13.3	55	12.8
Fruit and nut farms.....	7,282	90	17.8	197,961	17.0	62	14.5
Poultry farms.....	2,441	25	5.0	59,055	5.1	22	5.1
Dairy farms.....	4,816	29	5.7	77,400	6.6	31	7.2
Livestock other than poultry, dairy, and livestock ranches.....	3,942	28	5.5	73,788	6.3	29	6.8
Livestock ranches.....	2,640	19	3.8	51,262	4.4	23	5.4
General farms.....	2,952	32	6.3	81,009	6.9	23	5.4

Tobacco, miscellaneous, cotton, vegetable, and fruit and nut farms accounted for almost three-fifths of all hours worked by hired farm workers.

Number of hired farm workers and hours worked for farms classified by total hours worked by hired workers--
The distribution of farms, number of hired farm workers, and hours worked by hired farm workers by total hours of work by hired workers per farm were as follows:

Farms with total hours worked by hired farm workers of--	Farms	Average number of hired farmworkers per week		Hours worked by hired farm workers	
		Total (1,000)	Percent distribution	Total (1,000)	Percent distribution
Total.....	43,989	505	100.0	1,166,115	100.0
0 to 4,999 hours.....	2,989	4	0.8	9,780	0.8
5,000 to 9,999 hours....	11,054	36	7.1	84,410	7.2
10,000 to 19,999 hours..	15,602	98	19.4	220,795	18.9
20,000 to 29,999 hours..	6,568	69	13.7	159,745	13.7
30,000 to 39,999 hours..	2,590	38	7.5	90,289	7.7
40,000 to 49,999 hours..	1,492	28	5.5	66,126	5.7
50,000 to 99,999 hours..	2,354	69	13.7	162,059	13.9
100,000 or more hours...	1,342	163	32.3	372,910	32.0

The 1,342 farms with 100,000 or more hours of work by hired farm workers accounted for almost one-third and 3,696 farms with 50,000 or more hours of work by hired farm workers accounted for almost half of the 1.2 billion hours worked by hired farm workers.

Number of hired workers and hours of work not included in tables 1 to 28--Farm operators were asked to include all hired workers working on the farm and also the total hours worked by these hired workers. However, farm operators could not always report the number of persons working under contract and under the supervision of crew leaders, labor contractors, etc., and the hours worked by these contract workers. There were 7,515 farms for which all the hired workers working under contract were not included in the number of hired workers and the hours worked. Data for these farms are given in tables 22 to 27. Almost three-fifths of these 7,515 farms were fruit and nut farms, cotton farms, and vegetable farms. The expenditures for machine hire, custom and contract work for the 1964 Census of Agriculture are the only available measure of the importance of contract work on these 7,515 farms. In 1964, the expenditure for machine hire, custom and contract work on these 7,515 farms totaled \$89,816,000. Part of this expenditure represents payment for machine hire and customwork. Moreover, some of the hours worked by contract workers on these 7,515 farms were included in the totals for tables 1 to 21. On the basis of the amount of expenditure for machine hire, custom and contract work, it is estimated that the hours of work by contract workers not included in tables 1 to 21, did not exceed 60 million hours. This total of 60 million hours would be equivalent to 5 percent of the total hours worked by all hired workers for whom hours worked were reported.

Table 1. HIRED FARM WORKERS—LAND IN FARMS, CROPLAND HARVESTED, EXPENDITURES FOR HIRED LABOR, NUMBER OF REGULAR HIRED WORKERS, AND EXPENDITURES FOR MACHINE HIRE IN 1964, FOR FARMS CLASSIFIED BY TOTAL HOURS WORKED BY HIRED WORKERS, TENURE OF FARM OPERATOR, SIZE OF FARM, AND BY EXPENDITURES FOR HIRED LABOR, BY ECONOMIC CLASS OF FARM

Notice—Response to this inquiry is required by law (Title 13 U. S. Code). By the same law, your report to the Census Bureau is confidential. It may be seen only by sworn Census employees and may be used only for statistical purposes.

A8 SPECIAL SURVEY OF HIRED FARM WORKERS**Section 1.—HIRED FARM WORKERS**

The purpose of the following questions is to obtain data on the number and hours of farmwork performed by hired workers on the farm or ranch operated by you. Because the number of workers vary because of the seasonal nature of farmwork and because of the effect of weather, we are asking you to provide figures for each of the five weeks. Consider as farmwork or chores, work in the fields, milking, care and feeding of livestock and poultry, care and repair of equipment and buildings, keeping farm records, and planning and supervising farmwork. Do not include workers employed for operating a packing house, packing shed, processing plant, or other nonfarm activity.

1. How many hired persons performed farm work or chores on your farm or ranch during the week of—

November 28 to December 4? None ☐ Number of persons _____
December 5 to 11? None ☐ Number of persons _____
December 12 to 18? None ☐ Number of persons _____
December 19 to 25? None ☐ Number of persons _____
December 26 to January 1, 1966? None ☐ Number of persons _____

(For question 1, report the total number of hired persons working during each week, even though some of them worked only part of the week.)

2. What was the total hours worked on your farm or ranch by these hired workers during the week of—

November 28 to December 4? Total hours _____
December 5 to 11? Total hours _____
December 12 to 18? Total hours _____
December 19 to 25? Total hours _____
December 26 to January 1, 1966? Total hours _____

3. How many of these hired workers reported in question 1 were hired by the—

a. Month?
b. Week?
c. Day?
d. Hour?
e. Piece rate?

Number of persons for the—				
Week of Nov. 28 to December 4	Week of December 5 to 11	Week of December 12 to 18	Week of December 19 to 25	Week of Dec. 26 to January 1, 1966

(See questions on other side)

Section 1.—HIRED FARM WORKERS—Continued

4. What kind of farmwork required the most hired workers during the week of— Kind of farmwork requiring most workers each week. (For example, picking peaches, harvesting vegetables, milking, etc.)
- November 28 to December 4? _____
- December 5 to 11? _____
- December 12 to 18? _____
- December 19 to 25? _____
- December 26 to January 1, 1966?.... _____

5. Did any persons employed by and paid by a crew leader, a contractor, a buyer or processor, a cooperative or a customwork operator, do any farmwork or chores on a farm or ranch you operated during the five-week period, November 28 to January 1, 1966?..... No ☐ Yes ☐

If "Yes"—

- a. Were these persons included in the figures given for questions 1, 2, and 3? No ☐ Yes ☐
- b. What is the name and address of the crew leader, contractor, buyer, processor, cooperative or customwork operator, employing and paying these persons?

Name _____

Address _____

Section 2.—IDENTIFICATION

6. What is the name and telephone number of the person who prepared this report?

Name _____

Telephone exchange _____ Telephone number _____

Signed _____ Date _____

Notice—Response to this inquiry is required by law (Title 18 U. S. Code). By the same law, your report to the Census Bureau is confidential. It may be seen only by sworn Census employees and may be used only for statistical purposes.

A8A SPECIAL SURVEY OF FARM WORKERS

The purpose of questions 1 to 7 below is to obtain a record of the persons living in the house in which you live, those working during the week of December 26 to January 1, 1966, and the number of hours worked during the week by each person. The purpose of questions 9 to 13 is to obtain a record of any other person working on the farm or place you operate during the week of December 26 to January 1, 1966.

Section 1.—PERSONS LIVING IN THE HOUSE OF THE PERSON IN CHARGE OF THIS FARM OR PLACE

Please answer the following questions regarding the persons now living in the house in which you live. List every person 10 years old and over now living in your house. (If the farm is operated by a partnership, list also persons living in the house in which the partner lives.) Answer questions 1 to 7 for each person. List your name first. (Include as farmwork or chores, work in the fields, milking, care and feeding of livestock and poultry, care and repair of equipment and buildings, keeping farm records, and planning and supervising farmwork.) In answering questions 5, 6, and 7 include only hours actually worked. Do not include hours lost because of bad weather or illness.

1. What is the name of each person 10 years old and over? (List your name first.)	2. What is the relationship of this person to person in charge? (Write wife, son, daughter, partner, hired worker, etc.)	3. What is the sex of this person? (Write M for male and F for female)	4. How old was this person on his last birthday?	5. How many hours did this person do farmwork or chores on this farm or place during the week of December 26 to January 1? (Do not include housework)	6. Of the hours reported in question 5, how many were worked for CASH WAGES? (Not for an allowance or spending money)	7. How many hours did this person work during the week of December 26 to January 1 at jobs for pay OFF THIS PLACE?
(1)				None ☐ Hours _____	None ☐ Hours _____	None ☐ Hours _____
(2)				None ☐ Hours _____	None ☐ Hours _____	None ☐ Hours _____
(3)				None ☐ Hours _____	None ☐ Hours _____	None ☐ Hours _____
(4)				None ☐ Hours _____	None ☐ Hours _____	None ☐ Hours _____
(5)				None ☐ Hours _____	None ☐ Hours _____	None ☐ Hours _____
(6)				None ☐ Hours _____	None ☐ Hours _____	None ☐ Hours _____

(over)

Form A8A, Special Survey of Farm Workers (p. 1 of 2 pp.)

Section 2.—PERSONS NOT LIVING IN YOUR HOUSE BUT WORKING ON THE FARM OR PLACE YOU OPERATE

Consider as farmwork or chores, work in the fields, milking, care and feeding of livestock and poultry, care and repair of equipment and buildings, keeping farm records, and planning and supervising farmwork. Do not include workers employed for operating a packing house, packing shed, processing plant, or other nonfarm activity.

8. Did any other persons do any work for cash wages or piece-rate on this farm or place during the week of Dec. 26 to Jan. 1?

☐ Yes Answer questions 9 to 13.

☐ No Sign your name after question 14.

9. How many hired persons performed farmwork or chores on your

farm or place during the week of December 26 to January 1? Number _____
