13. Farms of Less Than 10 Acres, by Size, by Regions and States	251
14. Farms of 2,000 Acres or More—Number and Total Acreage, 1964 and 1959; and Land by Use, 1964, by Size, by Regions and States	253
15. Farms and Farm Characteristics by Size of Farm, for the United States: 1964	265

Chapter 3. Size of Farm

Introduction—Data are presented in this chapter for farms classified by acres of land in the farm. Farms have been classified by size for each census since 1860. For 1860 and 1870, acres of improved land rather than total acres in the farm was used as the basis of classification.

The classification of farms by size was developed to measure size of farm business or scale of farm operation. However, acres in the farm has never been a very good measure of scale of farm operation and with the large scale substitution of capital inputs for farmland and labor, acres in the farm has become, increasingly, an unsatisfactory measure of scale of farm operation or size of farm business. Acres of land are not uniform and standardizable physical units as are, for example, bushels of corn, number of sows, etc. The great heterogeneity in the productivity of land makes exceedingly difficult any grouping of parcels into size groups of acceptable semblance of uniformity or as very useful units of measurement. In fact, for the United States, where land is highly variable in its productivity, the lumping of all parcels in agricultural operations together, by counting the acres therein, violates almost every rule of aggregation. The differences in the productivity of an acre of land in various areas, and in various size groups of farms need to be considered when using data for various groupings of farms on the basis of physical area alone.

Sources of data—The land area of each farm has been determined at each census since 1860. Data in most tables in this chapter were obtained for a classification of all farms in the census. However, the data in Table 15 and in some other tables are estimates based upon reports for only a sample of farms. A headnote indicates data are estimates based upon a sample. Some of the size of farm data for the 1964, 1959, 1954, and 1950 censuses were obtained by tabulation of data for only a sample of farms. Generally, the sample used comprised all farms of 1,000 acres or more plus 20 percent of the remaining farms. For a more detailed description of the sample used for 1964, see the introduction to this volume.

Presentation of statistics—Data are presented for the United States, for three regions, and for the 50 States. Except for tables presenting data for the United States only, the tables contain data for two censuses, 1964 and 1959.

Statistics for censuses prior to 1964—Chapter V, volume II of the report for the 1959 Census of Agriculture contains many comparative data for prior censuses, that do not appear in the tables in this chapter.

Chapter V, volume II, 1959 Census of Agriculture contains tables giving—

1. Statistics for 1959 comparable to those given in table 15 for 1964.
2. Number of farms, by size, for each State for each census from 1880 to 1959.
3. Number of farms and all land in farms classified by use, for farms of 2,000 acres or more, by States, for 1959.
4. Acres of land in farms and acres of cropland harvested, by size of farm, by States for 1940, 1945, 1950, 1954, and 1959.
5. Farms and acres of cropland in cover crops, cropland used for grain and row crops, cropland farmed on the contour, land in stripcropping systems for soil-erosion control, land terraced on cropland and pastureland, land irrigated and irrigated cropland harvested by size of farm, by States, for 1959.

Other data published for 1964—The data given in table 15 for the United States have been published for each State in State table 20, volume I of the reports for the 1964 Census of Agriculture. Statistics for the number of farms, land in farms, and cropland harvested for each county appear in county table 3 of volume I of the reports for the 1964 Census of Agriculture.

Definitions and explanations—Definitions and explanations are limited to those which have a particular significance in respect to the presentation of statistics by size of farm. Definitions and explanations of general application are included in the introduction to this volume.

A farm—In analyzing size-of-farm statistics, the definition of a farm for census purposes should be noted. Places of less than 10 acres were counted as farms if the estimated sales of agricultural products for the year amounted to at least \$250. Places of 10 or more acres were counted as farms if the estimated sales of agricultural products for the year amounted

to at least \$50. Places having less than the \$50 and \$250 minimum estimated sales were also counted as farms if they could normally be expected to produce sufficient agricultural products to meet the requirements of the definition. This final qualification permitted inclusion as farms of some places farmed for the first time and places temporarily affected by crop failure or other unusual conditions.

Changes in the definition of a farm affect the comparability of size-of-farm data for the various censuses. Reference should be made to the introduction of this volume for a discussion of changes in the definition of a farm and the effect of these changes upon the statistics.

Land in farms—Except for managed farms, the land to be included in each farm was determined from the answers to questions about the number of acres owned, the number of acres rented from others or worked on shares for others, and the number of acres rented to others or worked on shares by others. The acres owned and the acres rented from others or worked on shares for others were first added together and then the acres rented to others or worked on shares by others were subtracted. The result represented the number of acres in the farm. The number of acres in a managed farm was the difference between the total land managed and that part of the managed land that was rented to others or worked on shares by others.

The acreage designated as "land in farms" consists primarily of "agricultural" land—that is, land used for crops and pasture or grazing. It also includes extensive areas of land not actually under cultivation nor used for pasture or grazing. For example, the entire acreages of woodland and wasteland owned or rented by farm operators are included as land in farms, unless they were being held for nonagricultural purposes or unless the acreages were unusually large.

Except for open range and grazing land used under government permit, all grazing land was to be included as land in farms provided the place of which it formed a part was a farm. Grazing land operated by grazing associations was to be reported in the name of the person chiefly responsible for conducting the business of the association. Land used rent-free was to be reported as land rented from others.

All land in Indian reservations that was used for growing crops or grazing livestock was to be included. Land in Indian reservations that was not reported by individual Indians and that was not rented to non-Indians was to be reported in the name of the cooperative group that used the land. In some instances, an entire Indian reservation was included in the census as one farm.

Classification of farms by size—The first classification of farms by size based on total acres in the farm was made in 1880. The classification has been changed several times to make improvements and to make adjustments because of increases in farm size. The following table shows most of the various size of farm groups used from 1880 to 1964.

TABLE 1. Size of Farm Groups: 1880 to 1964

Acres in farm	1964	1959	1954	1935, 1940, 1945, 1950	1920, 1925, 1930	1880 to 1910

1,000 to 4,999.....					X	
2,000 or more.....	X	X				X
5,000 or more.....						

The size of farm groupings remained practically unchanged from 1880 to 1930, except for changes in the size group, 1,000 acres and over. For 1920 and 1925, the grouping of farms 1,000 acres and over was divided into two farm groups—1,000 to 4,999 acres and farms 5,000 acres and over. For 1930, the grouping 5,000 acres and over was further divided into two groups—5,000 to 9,999 acres and 10,000 acres and over.

Beginning with 1935, a revised size of farm grouping was established to conform more closely with the government land survey system. The revised size of farm groups totaled 17, but 6 of these (10 to 19 acres, 20 to 29

acres, 30 to 49 acres, 175 to 179 acres, 260 to 379 acres, and 380 to 499 acres) were established primarily to provide comparable data for censuses prior to 1935. For 1964, two size groups (10 to 29 acres and 30 to 49 acres), used for the 1954 census, were combined, and 4 additional size groups were established (260

to 379 acres, 380 to 499 acres, 500 to 699 acres, and 700 to 999 acres) to provide for further classification for the increasing number of farms having 260 acres or more. For both the 1959 and 1964 censuses special tabulations were made for farms of 2,000 acres or more, by size of farm groups.

TABLE 2. Farms Classified by Acres of Total Land in Farms, for the United States, 1880 to 1964; and Acres of Improved Land, for the United States: 1860 and 1870

Year	Number of farms by acres of total land in farms								
	Total	Under 3 acres	3 to 9 acres	10 to 29 acres	30 to 49 acres	50 to 99 acres	100 to 499 acres	500 to 999 acres	1,000 or more acres

NA Not available.

¹Data for Alaska and Hawaii not included.

²Includes farms of 100 acres or more for Hawaii.

³Data for Alaska not available.

⁴Includes 62 farms for Alaska, in the under 50 acres size group.

⁵For 1860, the classification is for "Farms containing 3 acres or more." The number of farms in the various classes adds to 1,955,014, which is 89,063 less than the total number of farms.

Prior to 1900, the count of farms was the only statistic available by size of farm. From 1900 to 1935 the size of farm data published included not only a count of farms, but also data for all land in farms and the most important of all of the classes of land according to use. For the 1945 to the 1964 censuses, pub-

lished data by size of farm include farms, land in farms, classified according to use; the number of livestock and poultry; farm equipment; the production or sale of livestock, poultry, livestock products, and poultry products; the acreage and production of crops; farm expenditures; etc.

TABLE 3. Farms, all Land in Farms, Average Size of Farm, Average Value of Land and Buildings per Farm and per Acre, for the United States: 1850 to 1964

[Data for value of land and buildings for 1950 through 1964 are estimates based upon reports for a sample of farms.]

Year	Number of farms		All land in farms		Average size of farm (acres)	Value of land and buildings		Percent of land area in farms	Year	Number of farms		All land in farms		Average size of farm (acres)	Value of land and buildings		Percent of land area in farms

² Less than 0.05 percent.

¹Data for Alaska and Hawaii not included.

Characteristics of farms by size—The proportion of the total acres of land in farms repre-

sented by cropland, pastureland, and woodland varies by size of farm.

TABLE 4. Percent of All Land in Farms Represented-by Total Cropland, Total Pastureland and Total Woodland, by Size of Farm, for the United States: 1964

Size of farm	Percent of all land in farms represented by		
	Total cropland	Total pastureland	Total woodland
All farms.....	39.1	56.7	13.1
Less than 10 acres.....	58.2	17.2	3.6
10 to 49 acres.....	55.1	37.0	18.6
50 to 99 acres.....	54.4	37.8	22.9
100 to 139 acres.....	55.8	36.9	22.9
140 to 179 acres.....	60.3	33.7	18.9
180 to 219 acres.....	59.1	34.2	20.7
220 to 259 acres.....	62.4	31.8	17.7
360 to 379 acres.....	62.2	32.0	16.8
380 to 499 acres.....	62.0	32.7	15.3
500 to 699 acres.....	59.5	35.6	14.9
700 to 999 acres.....	57.1	38.8	13.0
1,000 to 1,999 acres.....	50.4	46.2	11.4
2,000 acres or more.....	13.5	84.0	8.9

The value of land and buildings probably more accurately portrays the productivity of farms than do acres in the farm. The following

table shows the distribution of farms in each size of farm group, by value of land and buildings per farm.

TABLE 5. Farms in Each Size Group, Classified by Value of Land and Buildings per Farm, for the United States: 1964

Size of farm	Number of farms with a value of land and buildings of— (dollars)									
	Total	Less than 10,000	10,000 to 19,999	20,000 to 39,999	40,000 to 69,999	70,000 to 99,999	100,000 to 149,999	150,000 to 199,999	200,000 to 499,999	500,000 or more
Total.....	3,157,857	747,330	656,098	712,636	479,773	215,172	160,112	71,265	91,107	24,364

Table 15 presents data showing the characteristics and importance of farms for each of the 12 size-of-farm groups for 1964.

Change in size of farm—The increase of farm size has been one of the significant developments in agriculture in the United States in the twentieth century. The number of farms has decreased rapidly in the last 30 years, but the acreage of land in farms has changed very little and the average size of farm has doubled since 1935.

TABLE 6. Average Size of Farm for the United States: 1850 to 1964

Year	Average size of farms (acres)						
1964...	351.6	1940...	174.5	1920...	148.5 ¹	1880...	133.7
1959...	302.8	1935...	154.8	1910...	138.5	1870...	153.3
1954...	1242.2	1930...	157.3	1900...	146.6	1860...	199.2
1950...	215.5	1925...	145.1	1890...	136.5	1850...	202.6
1945...	194.8						

¹Does not include data for Alaska and Hawaii.

The number of farms in each of the size of farm groups under 260 acres has decreased, while the number of farms in the size groups over 260 acres has increased. Many small farms have ceased operation and the land in many of these has been incorporated into

other farms. New technology and mechanization have accelerated the consolidation of farms. The inclusion of additional grazing land in the Western States has contributed to the increase in the number of farms 1,000 acres and over.

NA Not available.

¹Data for Alaska and Hawaii not included.

The number of farms under 10 acres in size has been declining since 1945. The discontinuance of farming by the operators of small farms and part-time farmers, the change in definition of a farm between the 1954 and the

1959 census, the almost complete disappearance of sharecropper farms in the South, etc. have contributed to the 70 percent decline in farms under 10 acres in size since 1945.

and going population . . .*

***** Americans at Mid-Decade

The pace-setting procession of the American people in the decade of the sixties has accelerated trends that are transforming the patterns and conditions of American life.

Americans at Mid-Decade issued by the Bureau of the Census, illustrates in a series of charts and graphs changes in the composition, distribution, age structure, family formation, and mobility of our growing population. An interim census report that reflects a dynamic America in 1965, this chartbook translates the Nation's population growth into a meaningful record of rising levels of income and education, and shifting occupational and employment patterns. It throws new light on the background of a wide range of problems facing the American people.

Americans at Mid-Decade spotlights the pace of national progress and the direction of on-going trends. For an informative and easy-to-read report on where America is going and what we have going for us, use the order form.
