

acres, 30 to 49 acres, 175 to 179 acres, 260 to 379 acres, and 380 to 499 acres) were established primarily to provide comparable data for censuses prior to 1935. For 1964, two size groups (10 to 29 acres and 30 to 49 acres), used for the 1954 census, were combined, and 4 additional size groups were established (260

to 379 acres, 380 to 499 acres, 500 to 699 acres, and 700 to 999 acres) to provide for further classification for the increasing number of farms having 260 acres or more. For both the 1959 and 1964 censuses special tabulations were made for farms of 2,000 acres or more, by size of farm groups.

NA Not available.  
<sup>1</sup>Data for Alaska and Hawaii not included.  
<sup>2</sup>Includes farms of 100 acres or more for Hawaii.  
<sup>3</sup>Data for Alaska not available.  
<sup>4</sup>Includes 62 farms for Alaska, in the under 50 acres size group.  
<sup>5</sup>For 1860, the classification is for "Farms containing 3 acres or more." The number of farms in the various classes adds to 1,955,014, which is 89,063 less than the total number of farms.

Prior to 1900, the count of farms was the only statistic available by size of farm. From 1900 to 1935 the size of farm data published included not only a count of farms, but also data for all land in farms and the most important of all of the classes of land according to use. For the 1945 to the 1964 censuses, pub-

lished data by size of farm include farms, land in farms, classified according to use; the number of livestock and poultry; farm equipment; the production or sale of livestock, poultry, livestock products, and poultry products; the acreage and production of crops; farm expenditures; etc.
