appears to have halted between 1964 and 1969. The average age of operators in 1945 was 48.7 years, increasing to 51.3 years in 1964, then dropping to 51.2 years in 1969. The percentage of all farm operators 65 years old and older was 14.8 percent in 1950. It increased to 17.4 percent in 1964 then dropped back to 16.6 percent in 1969.

As shown in table 12 for class 1-5 farms, farm operators under 35 years of age and over 65 years of age accounted for a smaller portion of several key items of agriculture production than did operators of 35 to 44,45 to 54 , or 55 to 64 years of age.

Considering size of farm, value of land and buildings, cropland harvested and value of sales, the 35 to 44 , and 45 to 54 years of age groups are the most important. (See table 13.)

Table 14. Farm Operators by Age, by Tenure, Percent Distribution for Class 1-5 Farms: 1969

By tenure of operator, full owners tend to be the oldest and tenants the youngest. The average age of operators was 53.0 years for full owners, 48.4 years for part owners, and 40.3 years for tenants. (See table 14.)

## Race of Farm Operator

Only 104 thousand farm operators reported race other than white in 1969 versus 200 thousand in 1964. Of these operators in 1969, 87 thousand were black, 5 thousand were Indian, and 11 thousand were "other." Table 15 provides the number of farms and land in farms by race of operator for each class, tenure, and type of organization group included in the 1969 census. The data by class and tenure are for all farms; by type of organization, for class $1-5$ farms.

Most of the black and Indian operators were on farms which were in the lower value-of-sales categories. Sixty-two thousand of the 87 thousand operators operated farms with less than $\$ 2,500$ in sales; 74 thousand operated farms with less than $\$ 5,000$. The distribution for Indian operators was about the same, with nearly one-half reporting sales of less than $\$ 2,500$ from their farms.

In 1969, 449 of the farm operators of races other than white were in the Northeast, 3,004 in the North Central, 90,141 in the South, and 10,253 in the West. Of the 13,706 not in the South 1969, 4,483 were in California and 3,113 were in Hawaii, leaving only 6,110 in all the other States. The number in the South dropped from 185,578 in 1964 to only 90,141 in 1969. Changes in the other regions over the 5 -year period were relatively minor.

## Off-Farm Work by Farm Operators

The proportion of farm operators working off their farms has increased significantly, rising from 38.9 percent in 1950 to 54.3
