## REPORTS OF 1974 CENSUS OF AGRICULTURE

**Preliminary Reports.** Four pages of data published separately for each county having 10 farms or more, and for each State, the four geographic regions, and the United States. *The statistics printed in these reports are superseded by those in the final reports, Volumes I through IV.*

**Volume I. State and County Data.** One for each State, Puerto Rico, Guam, and the Virgin Islands, covering the area and its subdivisions. The reports for the States contain data for all farms and farms with sales of \$2,500 and over. Chapter I contains detailed data at the State level classified by size of farm, tenure and age of farm operator, type of organization, value of products sold, and major type of farm; Chapter II, county data summarized by subject; Chapter III, county data by subject for miscellaneous crop and livestock items found in relatively few counties; Chapter IV, county data by county.

**Volume II. Statistics by Subject.** Chapters containing total data for the United States, geographic regions and divisions, and States, for all farms and farms with sales of \$2,500 and over.

**Volume III. Agricultural Services.** Data by county for each State covering establishments whose primary activities are providing agricultural services. Data at the U.S., State, and county levels for all establishments are presented for selected four-digit standard industrial classification codes by size and type of organization. Data shown include dollar volume of business, gross receipts from products provided, gross receipts, labor and payroll by type of service performed, capital expenditures, and expenditures for electricity, gasoline, petroleum, and other fuels.

### Volume IV. Special Reports.

**Part 1. Graphic Summary.** Profiles the Nation's agricultural system in a series of U.S. maps, a number of which are printed in color. The characteristics of America's farms in 1974 are illustrated for crops, livestock, and many other characteristics.

**Part 2. Ranking Counties and States.** Reports on the top ranking 100 counties and 10 States in descending order of importance for 88 selected items for 1974 with comparative data for 1969.

**Part 3. Coverage Evaluation.** Shows the completeness of the agriculture census for States, geographic divisions, and the United States. Data also show the characteristics of farms missed by value of sales and by selected standard industrial (type-of-farm) classifications. Sampling reliability of the estimate of coverage is shown by value of sales classifications.

**Part 4. Procedural History.** A comprehensive summary of the procedures used in conducting the 1974 Census of Agriculture in the 50 States, Puerto Rico, Guam, and the Virgin Islands. The history explains the procedures used from early planning and testing through tabulation and publication of the final reports.

**ACKNOWLEDGMENTS**—Many persons participated in the various activities of the 1974 Census of Agriculture. Primary direction was by Shirley Kallek, Associate Director for Economic Fields. Her predecessor, James W. Turbitt, now Associate Director for Administration and Field Operations, directed the early stages of planning for the census.

This report was prepared in the Agriculture Division under the general supervision of J. Thomas Breen, Chief (to February 1976), and Orvin L. Wilhite, his successor. Kenneth R. Norell, Assistant Chief for Special Surveys, participated in overall planning and supervised the preparation of instructions for office processing and training materials, the development of enumeration procedures, and the technical review of the statistics prior to publication. Hector Vila, Chief, Outlying Areas Statistical Branch, made significant contributions in the overall planning, the preparation of instructions and training materials for the enumeration, and the handling of technical problems associated with office processing. The manual processing of the questionnaires and tables was performed by Alice Brown, Pura Lopez, Lidia Walters, and Lola Grassl. William Perry was responsible for preparing the tables.

The census data were collected at the direction of the Governor of Guam, the Honorable Ricardo J. Bordallo. The actual collection of the data was carried out by census enumerators under the direct responsibility of Joseph T. Flores, Census Project Manager, and two supervisors.

Forms design was accomplished under the general supervision of Cecil B. Matthews, Chief,

Administrative Services Division (to September 1975), and Henry J. Husmann, his successor, assisted by Gladys S. Potts and Cathern S. Kline.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Special acknowledgment is made to the many farmers and members of their families who furnished the information.

# INTRODUCTION

## Authority, Area Covered, and History

The 1974 Census of Agriculture was taken in accordance with the provisions of Title 13, United States Code, reaffirmed by section 818 of the Agriculture and Consumer Protection Act of 1973 (Public Law 93-86). Sections 142(a) and 191 of Title 13 provide for a census of agriculture every 5 years in each State, the District of Columbia, Puerto Rico, Guam, and the Virgin Islands. Section 191 also provides that the census data for Guam may be collected by the Governor or highest ranking Federal official, in accordance with plans prescribed or approved by the Secretary of the U.S. Department of Commerce.

The 1974 census is the eighth census of agriculture of Guam. The first agricultural census for Guam was taken in 1920 as part of the decennial census and continued every 10 years thereafter. In 1964, the first quinquennial (5-year) census was taken in Guam, as authorized by Title 13.

## Questionnaire

The questionnaire for the 1974 Census of Agriculture was prepared by the staff of the Census Bureau with the cooperation of the Department of Agriculture of Guam.

To provide more detailed statistics and to aid in processing the data collected, more information was requested for 1974 than for 1970: More crops were treated separately on the 1974 questionnaire, the poultry categories were expanded, and sales data on crops and livestock was included. Inquiries were also added on the distance of farms from a hard-surface road, financial resources

of farm operators, number of days worked by paid and unpaid farm labor, and fisheries.

Definitions and explanations for selected items are given in appendix A. A facsimile of the 1974 questionnaire is shown in appendix B.

## Training Program for Enumerators

The supervisors, assistant supervisors, and enumerators employed for the census in Guam received special training for the job, which was prepared by the Census Bureau. The training included classroom practice in interviewing and filling out questionnaires and detailed discussion of the enumerators' instructions.

## Enumeration

The statistics in this report represent totals obtained by adding information collected from farm operators during a 7-week period from January 27 to March 14, 1975. For the enumeration, Guam was divided into 20 Enumeration Districts (ED's), clearly outlined on special maps prepared for the census.

Enumerators were given a map and assigned a specific area to enumerate. Except in cities and larger villages, they were required to visit each dwelling (or place) in their area, list the head of its household, and, if it conducted agricultural operations, complete a questionnaire. In urban areas, enumerators were given a list of 1969 farm operations in their assignment and were required to enumerate those that still operated as farms in 1974.

To obtain as complete an enumeration as possible, enumerators were required to plot on their map the location of each

occupied dwelling or place in their ED. They were also given lists of special and large farms located in their area and were required to fill out a questionnaire for each one or explain why one was not necessary.

Enumerators were also instructed to ask enough questions about tracts of land on which no one lived to determine whether agricultural data should be collected from the person in charge of the land. This procedure was designed to assure the enumeration of all land used for agriculture, whether by an individual, a partnership, a corporation, or an institution.

To avoid enumeration of the same place more than once, the Census Bureau established rules whereby enumerators could determine who was responsible for completing a questionnaire for a given place. If a place was entirely within the boundaries of an ED, the enumerator assigned to it completed the questionnaire, regardless of where the person in charge of the operation lived. If a place was partly in one ED and partly in another, the enumerator for the ED in which the person in charge lived was responsible for completing the questionnaire; he reported on all the land that the person in charge operated in Guam, including land outside his ED.

## Farm Definition

The statistics presented in this report relate to places qualifying as census farms. For the 1974 Census of Agriculture in Guam, a farm was defined as any place on which any crops or vegetables were harvested or gathered during 1974 or on which there was any livestock

## INTRODUCTION Continued

or 15 or more poultry at the time of enumeration.

In comparison, the definition of a farm for the 1970 census was any place on which any crops or vegetables were harvested or gathered during 1969, or on which there was a combined total of 10 or more fruit or nut trees or plants, or on which there was any livestock, or five or more poultry at the time of enumeration.

census farms were voided. The remaining questionnaires were then examined for accuracy, consistency, and completeness. Errors in calculations and units of measure, inconsistencies, and misplaced entries were corrected; incomplete reports were adjusted on the basis of related information on the same questionnaire or on questionnaires for nearby farms of similar type and size.

After the questionnaires had been edited, the information on them was transferred to tabulation sheets. Subject matter specialists again examined the tabulations for reasonableness and consistency and made necessary corrections on the basis of a further appraisal of the original reports before approving the data for publication.

### Office Processing

In the Agriculture Division at the Census Bureau, all questionnaires were individually edited prior to tabulation of the data. In the editing process, questionnaires for places that did not qualify as

### Tabular Presentation

In the tables presenting the data compiled from the questionnaires completed in Guam, totals are given for each election district and for Guam as a whole. Comparative information for preceding census years is given for those items for which information is available.

### Abbreviations and Symbols

The following abbreviations and symbols are used throughout the tables:

- Represents zero.
- D Data withheld to avoid disclosing figures for individual farms or farm operations.
- X Not applicable.
- Z Less than half of the unit reported.
- NA Not available.

# APPENDIX A. General Explanation

## General Information

The following definitions and explanations relate to those items that are considered to be inadequately described in the tables. Most of the definitions come from the instructions given to enumerators. For an exact wording of the questions and instructions on the questionnaire, see the facsimile of the questionnaire in appendix B.

In the tables, the data for land in farms, land use, fruit and nut trees, and livestock and poultry on hand represent the situation existing at the time of enumeration of each farm. The 1974 census enumeration began on January 27, 1975; the 1970 census enumeration began on April 1, 1970. All other data, such as that relating to hectares, production, sales, hired workers, and workpower used, are for the calendar years 1974 and 1969.

## Farm Operator

The term "farm operator" designates a person who operates a farm, either by doing the work himself or by directly supervising the work. He may be the owner, a member of the owner's household, a tenant or renter, the manager, or the person in charge of an institutional farm. By definition, the number of farm operators is the same as the number of farms.

## Farms or Operators Reporting

Figures for "farms" represent the number of farms for which the specified item was reported. The difference between the total number of farms and the number of

farms reporting a particular item represents the number of farms not having that item, provided a correct report was received for all farms.

Where applicable, figures are given for the number of farms or operators not reporting items that were intended to be reported for all farms; for an example, see the item "Years on farm."

## Land

**Land in farms**—All data relating to land tenure and land in farms refer to land operated on the day of enumeration. The land to be included in each farm was determined from the answers to questions 1 through 7 in section 2 of the agriculture questionnaire (see appendix B). The amounts of land reported as owned, rented from others, used under permit, occupied without permit, and furnished by the government were added together, and the amount of land reported as rented to others was subtracted from that sum. The result represents "Land in farms." Although the area designated land in farms consists primarily of agricultural land—i.e., land used for crops, pasture, or grazing—it also includes areas of land not actually under cultivation nor used for pasture or grazing. For example, woodland and wasteland owned or rented from others was included as land in farms unless reports indicated it was being held for nonagricultural purposes.

**Land owned**—This item includes all land the operator and/or his wife held under title, purchase contract, homestead law, or as heir or trustee of an undivided estate at the time of enumeration. How-

ever, all land used by the U.S. military services was excluded even though owned by the operator.

**Land rented to others**—This item includes all land the operator rented or leased to others and all land that he assigned to others on shares or rent free. For the most part, the land rented to others represents agricultural land, but it also includes land rented for residential or other purposes. The tenant is considered to be the operator of land leased, rented, or worked on shares, even though his landlord may supervise his operations. The landlord is considered to be the operator of only that portion of the land not assigned to his tenants.

**Land rented from others**—This item includes not only land that the operator rented or leased from others, but also land he worked on shares for others and land he occupied rent free.

**Land occupied by permit**—Rights to use land owned or controlled by the Government of Guam are in the form of permits rather than lease or rental arrangements. Accordingly, this item includes all land for which the operator had a Government of Guam permit.

**Land occupied without permit**—This item includes all land that the operator occupied as a "borrower" or "non-permittee," without any ownership rights to the land, or without any kind of permit, lease, or rental agreement.

**Land furnished by Government**—This item includes all land that the Govern-

## APPENDIX A Continued

ment of Guam furnished to the operator in connection with his living quarters.

### Land Use

Land in farms at the time of enumeration has been distributed according to the way it was being used on enumeration day. The land uses described in the following paragraphs are mutually exclusive in that each hectare of land is counted only once even though it may have had more than one use during the year.

**Cropland used for crops**—This item refers to all land planted in crops at the time of enumeration. Land was to be reported only once even if two or more crops were planted on it. Land in crops includes (1) land in bearing and nonbearing fruit and nut trees or plants or any other tree crops, (2) land that had partial, but not total, crop failure; and (3) land in home gardens.

**Cropland used for pasture**—This item includes all cropland on the place that was used only for pasture. Land planted in crops, even though the crops were not to be harvested, was not to be included here.

**Cropland not used for crops or pasture**—This item refers to all cropland on the place that was not used for crops or pasture. It does not include land so hilly, rocky, or wet that the cost of improving it for cultivation would be more than the operator could pay. Nor does it include land in roads, streams, or swamps. It does include land on which there was total crop failure due to flood, drought, insects, fire, or other causes; cropland lying idle; and cropland planted with soil improvement grass, or other cover crops planted for the purpose of improvement.

**Pastureland used for pasture or grazing**—This pastureland includes all land used for grazing livestock at the time of enumeration. It does not include cropland even though cattle or other livestock may have been grazed on it.

**Pastureland not used for pasture or grazing**—This pastureland refers to all land suitable for pasture or grazing that was not being used for grazing livestock at the time of enumeration. It includes land that, in the opinion of the operator, could have supported enough plant growth, either native or planted, for grazing provided the clearing and grazing of the land would not seriously damage it.

**All other land**—This item includes all land not qualifying as either cropland or pastureland as defined above. It includes land in house lots, barn lots, ponds, ditches, swamps, steep slopes, roads, brushland, wasteland, and forest areas.

### Type of Holding

The purpose of the items under this heading was to classify holdings according to whether their production was mainly for home consumption or mainly for sale, and to classify the holdings whose production was mainly for sale by the most important types of agricultural production.

The production figures for home consumption are based on the agricultural output of the holding during 1974. Agricultural output refers to the part left after rent has been paid to the landlord and/or the part left after deduction of the produce used on the holding for further agricultural production, such as for forage or seed.

**Holding with production mainly for home consumption**—This type applies to holdings which produce mainly for home consumption; i.e., that 50 percent or more of the agricultural output of the holding is consumed by the holder's household.

**Holding with production mainly for sale**—This type applies to holdings where 50 percent or more of the agricultural output of the holding is produced for sale. Holdings which produce mainly for sale are classified further according to their most important activity.

**Crop holdings** are those on which 50 percent or more of the value of sales was from the sale of crops.

**Livestock and/or poultry holdings** are those on which 50 percent or more of the value of sales was from the sale of livestock, livestock products, poultry, or poultry products.

**Mixed holdings** are those on which neither the sale of crops nor the sale of livestock and/or poultry nor home consumption accounts for 50 percent or more of the value of sales.

**Other holdings** are those that do not belong to any of the previous groups.

### Crops Harvested

The questionnaire contained individual inquiries for crops commonly grown and a space to write in the name of crops less frequently grown. The information requested for 1974 was on the area of each crop harvested, on pounds harvested, and, for the first time, on pounds sold.

**Vegetables and field crops**—The total quantity of each vegetable and field crop harvested and the quantity sold during 1974 was always to be reported, even when the area harvested amounted to less than 10 acres.

When two or more crops, or two or more plantings of the same crop, were harvested from the same land during the year, the area was to be reported for each separate crop or planting.

**Fruits and nuts**—For fruits grown on farms, information was obtained on the total quantity harvested and on the quantity sold during the year. Data were collected also for the number of trees or plants, both bearing and nonbearing, that were on the place on enumeration day. For breadfruit, betelnuts, coconuts, guavas, soursops, starfruits, anonas, and other wild or cultivated fruits, nuts, or crops, the reported data represent total quantities harvested or gathered during the year.

## APPENDIX A Continued

by all members of the operator's household, both from land on the farm and other land.

### Livestock, Poultry, and Fish

Data for livestock and poultry relate to the number on hand at the time of enumeration. All livestock and poultry were to be enumerated on the place where they were at the time of the enumeration regardless of who owned them.

Sales data were collected for all livestock and poultry sold from the place in 1974, as well as the dozens of eggs and quarts of milk sold.

Data for pounds of fish harvested and sold relate to the calendar year 1974 and were collected for the first time in the 1974 Census of Agriculture.

**Cattle and calves**—Within this category, "Milk cows" are cows that had been milked at any time during the preceding 12 months. "All other" refers to cattle and calves other than milk cows. Livestock sales data are for the calendar year 1974.

### Mechanical and Animal Power

Sources of workpower refer to those used only for agricultural activities on the place in 1974 whether or not the animal or mechanical power used belonged to the operator.

### Operator Characteristics

**Residence of operator**—Farm operators were classified by residence according to whether or not they lived on the farms they were operating. Some of those who did not live on the farms they operated themselves lived on farms operated by others. Where all the land was rented from others or worked on shares for others, the operator was considered to live on the farm operated provided the dwelling he occupied was included in the rental agreement. In such cases, the dwell-

ing was not necessarily on the land being operated. Similarly, a farm operator who did not live on the land being cultivated or grazed, but who had some agricultural operations (other than a home garden) at his dwelling, was considered to be living on the farm operated.

**Year began operating present farm**—Enumerators were instructed to obtain the year a farm operator began to operate the farm, i.e., the first year the operator took continuous charge of his present farm or any part of it.

**Work off farm**—Data for work off farm were collected for 1969 and 1974. Off-farm work was enumerated to provide information on the extent of part-time farming in Guam. Farm operators reporting off-farm work in 1974 varied from those who worked full time for the military installations to those who supplemented their income with odd or spare-time jobs.

Only work by the farm operator for pay was to be reported. Days worked off the place were to include work at a job such as clerk, salesman, laborer, or truck driver; at a nonfarm business such as operating a store or repair shop; or at a profession such as doctor, lawyer, or teacher. Exchange work was not to be reported.

### Farm Classifications

This report presents detailed data for farms classified by size of farm and tenure of farm operator.

**Farms by size**—Farms were classified by size on the basis of the total land area established in each one. According to the census definition, a farm is essentially an operating unit not an ownership tract. All land operated or managed by one person or partnership represents one farm. In case of share-tenants, the land assigned to each share-tenant is considered a separate farm, even though the landlord may consider his entire landholding to be one unit rather than several separate units.

**Farms by tenure of operator**—Farms were classified by tenure of operator on the basis of information reported for land owned, rented from others, operated under a government permit, operated without a permit (nonpermittee), or furnished by the Government of Guam in connection with the operator's living quarters. During the processing operations, each questionnaire was coded to indicate whether the farm operator was a full owner, part owner, tenant, permittee, nonpermittee, or other operator.

**Full owners** operate only land owned or land owned plus land operated under a permit, without a permit, or in connection with living quarters furnished by the Government of Guam.

**Part owners** operate land owned plus land rented from others. They may also operate land under a permit, without a permit, or furnished by the Government of Guam in connection with their living quarters.

**Tenants** operate only land rented from others or land rented plus land under a permit, without a permit, or furnished by the Government of Guam in connection with their living quarters.

**Permittees** operate land under a permit from the Government of Guam for all the land operated, or they may operate some of the land under a permit and the remainder of the land without a permit.

**Nonpermittees** operate "borrowed" land. They do not own or rent the land, operate the land under a permit, or use the land under any arrangement with the Government of Guam.

**Others** are operators who do not qualify for any of the foregoing groups. All the land is furnished by the Government of Guam in connection with their living quarters, or part of the land is operated without a permit and part is furnished by the Government of Guam in connection with their living quarters.
