BUREAU OF THE CENSUS

Robert L. Hagan, Acting Director

Shirley Kallek, Associate Director for Economic Fields

AGRICULTURE DIVISION

Orvin L. Wilhite, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1974 Census of Agriculture. Primary direction was by Shirley Kallek, Associate Director for Economic Fields. Her predecessor, James W. Turbitt, now Associate Director for Administration and Field Operations, directed the early stages of planning for the census.

This report was prepared in the Agriculture Division under the general supervision of J. Thomas Breen, Chief (to February 1976), and Orvin L. Wilhite, his successor. Kenneth R. Norell, Assistant Chief for Special Surveys, participated in overall planning and supervised the preparation of instructions for office processing and training materials, the development of enumeration procedures, and the technical review of the statistics prior to publication. Hector Vila, Chief, Outlying Areas Statistical Branch, made significant contributions in the overall planning, the preparation of instructions and training materials for the enumeration, and the handling of technical problems associated with office processing. Coordination of the various processing operations and compilation of this report was carried out under the direction of William Perry.

Data keying operations were performed in the Key Entry Section, Data Management Branch, Computer Services Division, under the direction of C. Thomas DiNenna. Anola Nightengale and Ruth Simmons made significant contributions in supervision and Entrex programing. Systems Software Division, under the direction of Claggett Jones, was largely responsible for processing and tabulating the data using the COBOL Census Tabulation System (COCENTS). Melroy Quasney and Charles King made a significant contribution by teaching a class on COCENTS to the group of Agriculture Division employees who prepared the computer programs by which the data were tabulated.

The census data were collected at the direction of the Governor of the Virgin Islands, the

Honorable Cyril E. King. The actual data were collected by census enumerators under the supervision of Henry Carter and John W. Westfall.

Forms design was accomplished under the general supervision of Cecil B. Matthews, Chief, Administrative Services Division (to September 1975) and Henry J. Husmann, his successor, assisted by Gladys S. Potts and Cathern S. Kline.

Within the Publication Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Special acknowledgment is made to the many farmers and members of their families who furnished the information.

REPORTS OF 1974 CENSUS OF AGRICULTURE

Preliminary Reports. Four pages of data published separately for each county having 10 farms or more, and for each State, the four geographic regions, and the United States. *The statistics printed in these reports are superseded by those in the final reports, Volumes I through IV.*

Volume I. State and County Data. One for each State, Puerto Rico, Guam, and the Virgin Islands, covering the area and its subdivisions. The reports for the States contain data for all farms and farms with sales of \$2,500 and over. Chapter I contains detailed data at the State level classified by size of farm, tenure and age of farm operator, type of organization, value of products sold, and major type of farm; Chapter II, county data summarized by subject; Chapter III, county data by subject for miscellaneous crop and livestock items found in relatively few counties; Chapter IV, county data by county.

Volume II. Statistics by Subject. Chapters containing total data for the United States, geographic regions and divisions, and States, for all farms and farms with sales of \$2,500 and over.

Volume III. Agricultural Services. Data by county for each State covering establishments whose primary activities are providing agricultural services. Data at the U.S., State, and county levels for all establishments are presented for selected four-digit standard industrial classification codes by size and type of organization. Data shown include dollar volume of business, gross receipts from products provided, gross receipts, labor and payroll by type of service performed, capital expenditures, and expenditures for electricity, gasoline, petroleum, and other fuels.

Volume IV. Special Reports.

Part 1. Graphic Summary. Profiles the Nation's agricultural system in a series of U.S. maps, a number of which are printed in color. The characteristics of America's farms in 1974 are illustrated for crops, livestock, and many other characteristics.

Part 2. Ranking Counties and States. Reports on the top ranking 100 counties and 10 States in descending order of importance for 88 selected items for 1974 with comparative data for 1969.

Part 3. Coverage Evaluation. Shows the completeness of the agriculture census for States, geographic divisions, and the United States. Data also show the characteristics of farms missed by value of sales and by selected standard industrial (type-of-farm) classifications. Sampling reliability of the estimate of coverage is shown by value of sales classifications.

Part 4. Procedural History. A comprehensive summary of the procedures used in conducting the 1974 Census of Agriculture in the 50 States, Puerto Rico, Guam, and the Virgin Islands. The history explains the procedures used from early planning and testing through tabulation and publication of the final reports.

VIRGIN ISLANDS

Municipalities, Quarters and Cities

INTRODUCTION

Authority, Area Covered, and History

The 1974 Census of Agriculture was taken in accordance with the provisions of Title 13, United States Code, reaffirmed by section 818 of the Agriculture and Consumer Protection Act of 1973 (Public Law 93-86). Sections 142(a) and 191 of Title 13 provide for a census of agriculture every 5 years in each State, the District of Columbia, Puerto Rico, Guam, and the Virgin Islands. Section 191 also provides that the census data for the Virgin Islands may be collected by the governor, or highest ranking Federal official, in accordance with plans prescribed or approved by the Secretary of the U.S. Department of Commerce.

The 1974 Census is the eighth census of agriculture of the Virgin Islands. The first, taken in 1917, was a special census authorized by the Secretary of Commerce. The next was taken in 1930 in conjunction with the population census, a practice that continued every 10 years through 1960. The 1964 Census of Agriculture was the first quinquennial (5-year) census to be taken in the Virgin Islands. For the quinquennial census in 1969, the data for the Virgin Islands were collected in 1970 in conjunction with the 1970 Census of Population. The 1974 census was the third quinquennial census to be taken in the Virgin Islands.

Questionnaire

The questionnaire for the 1974 Census of Agriculture was prepared by the staff of the Census Bureau with the cooperation of the Department of Agriculture of the Virgin Islands. It contained 89 inquiries, many with several parts. The inquiries

were based on current requirements for agricultural information and, to some extent, on the desire for comparability with earlier censuses.

In most respects, the questionnaire for 1974 was closely comparable with the one for 1969. Among the changes were the following:

1. Dropping the inquiry on farm mortgage debt.
2. Adding inquiries on the distance of farms from a hard-surface road, the financing sources for farm operations, and the number of, and days worked by, paid and unpaid farm labor.
3. Adding an additional ownership category for workpower.

Definitions and explanations for selected items are given in appendix A. A facsimile of the 1974 questionnaire is shown in appendix B.

Training Program for Enumerators

The supervisors, assistant supervisors, and enumerators employed for the census in the Virgin Islands received special training for this job, which was prepared by the Census Bureau. The training included practice in interviewing and filling out questionnaires, and detailed discussion of the enumerators' instructions.

Enumeration

The statistics in this report represent totals obtained by tabulating information collected from farm operators from the middle of August to the end of September 1975. For the enumeration, the Virgin Islands were divided into five

Enumeration Districts (ED's) clearly outlined on special maps prepared for the census.

Each enumerator was assigned a specific area to enumerate. The enumerators were given a map of their area and a list of the persons from whom a questionnaire had been obtained in the 1969 Census of Agriculture as well as other persons known to be conducting farm operations from other sources. The enumerators were required to visit all the persons on their lists.

To obtain as complete an enumeration as possible, enumerators were required to plot on their map the location of each occupied dwelling or place in their ED. They were also given lists of special and large farms located in their area and were required to fill out a questionnaire for each one or explain why one was not necessary.

Enumerators were also instructed to ask enough questions about tracts of land on which no one lived to determine whether agricultural data should be collected from the person in charge of the land. This procedure was designed to assure the enumeration of all land used for agriculture, whether by an individual, a partnership, a corporation, or an institution.

To avoid enumeration of the same place more than once, the Census Bureau established rules whereby enumerators could determine who was responsible for completing a questionnaire for a given place. If a place was entirely within the boundaries of an ED, the enumerator assigned to it completed the questionnaire, regardless of where the person in charge of the operation lived. If a place was partly in one ED and partly in

INTRODUCTION Continued

another, the enumerator for the ED in which the person in charge lived was responsible for completing the questionnaire; he reported on all the land that the person in charge operated in the Virgin Islands, including land outside his ED.

Farm Definition

The statistics presented in this report relate to places qualifying as census farms. For the 1974 Census of Agriculture in the Virgin Islands, a farm was defined as any "place" of 3 acres or more on which any field crops or vegetables were harvested or gathered during the 12-month period between July 1, 1974, and June 30, 1975, or on which there was a combined total of 10 or more fruit or nut trees or plants, any livestock, or 10 or more poultry at the time of enumeration. Places of less than 3 acres were counted as farms if their sales of agricultural products between July 1, 1974, and June 30, 1975, amounted to at least \$100, or if they could normally be expected to produce agricultural products in sufficient quantity to provide sales amounting to at least \$100. All places meeting any of the criteria specified in the census farm definition were included in the tabulations. The word "place" designates all land in the Virgin Islands under the control of one person or partnership. Control of the land may have been through ownership, management, lease, rental, or cropping arrangement.

For all previous censuses except the one for 1950, the definition of a farm

was the same as for 1974. For 1950, all places, regardless of size, were counted as farms if the total value of agricultural products in 1949, except home garden products, whether for home use or for sales, amounted to \$100 or more. Enumerators filled out a questionnaire for every place that the operator considered a farm, every place of 3 acres or more whether or not it was considered a farm, and every place of less than 3 acres whose agricultural production in 1949 was valued at \$100 or more.

Office Processing

In the Agriculture Division at the Census Bureau, each questionnaire was edited and coded prior to being sent for data keying. Questionnaires for places not meeting the census farm definition criteria were voided. The remaining questionnaires were examined for accuracy, consistency, and completeness. Enumerators' errors in computations and in units of measures, inconsistencies, and misplaced entries were corrected. Missing information was derived and entered on incomplete reports on the basis of related information on the same questionnaire or from questionnaires for nearby farms of similar type and size. In certain instances, respondents were contacted by mail or telephone to complete or clarify certain entries on their reports.

In the coding process, numeric codes were assigned and entered on each questionnaire to classify farms by size in terms of total area, by tenure and birth-

place of the operator, and by the total value of agricultural products sold. In addition, questionnaires for commercial farms were coded to further classify them by type of farm.

After the questionnaires had been edited and coded, the data were keyed onto magnetic tape. Data records were reformatted and tabulated on the computer.

Subject matter specialists reviewed the computer tabulations for reasonableness and consistency. Corrections were made on the basis of a reexamination of the original questionnaires. The historical data to be published were then added.

Tabular Presentation

The data tables in this report give totals for each of the three islands—St. Croix, St. John, and St. Thomas—and for the Virgin Islands as a whole. Comparative information for preceding census years are given for those items for which information is available.

Abbreviations and Symbols

The following abbreviations and symbols are used throughout the tables:

- Represents zero
- D Data withheld to avoid disclosing figures for individual farms or farm operations
- X Not applicable
- Z Less than half of the unit reported
- NA Not available

APPENDIX A. General Explanation

General Information

The following definitions and explanations relate to those items that are considered to be inadequately described in the tables. Most of the definitions come from the instructions given to enumerators. For an exact wording of the questions and instructions on the questionnaire, see the facsimile of the questionnaire in appendix B.

For the tables, data for land in farms, fruit and nut trees, equipment and facilities, and livestock and poultry on hand represent the situation existing at the time of enumeration of each farm. The enumeration date for all previous censuses was April 1 of the census year, except for the census of 1964, which was taken in November and December of 1964. Data for acres, production and sales of crops, land use, sales of livestock and poultry, livestock and poultry products, and expenditures relate to the year preceding the year of the census, except 1964 data, which relate to the year 1964, and 1974 data, which relate to the 12-month period between July 1, 1974 and June 30, 1975.

Farm Operator

The term "farm operator" designates a person who operates a farm, either doing the work himself or directly supervising the work. He may be the owner, a member of the owner's household, a hired manager, or a tenant, renter, or sharecropper. If he rents land to others or has land worked on shares by others, he is considered the operator only of the land he retains for his own operation. In the case of a partnership, only one partner is counted as an operator. By definition, the

number of farm operators is the same as the number of farms.

Farms or Operators Reporting

Figures for "farms reporting" or "operators reporting" represent the number of farms, or operators, for which the specified item was reported. The difference between the total number of farms and the number of farms reporting a particular item represents the number of farms not having that item, provided a correct report was received for all farms.

Land

Land in farms—All data relating to land tenure and land in farms refer only to land located in the Virgin Islands and operated on enumeration day. The land to be included in each farm was determined from the answers to questions 3 through 6 in section 2, which relate to land tenure (see the facsimile of the questionnaire in appendix B). The acres reported as owned, rented from others, or worked on shares for others were added together and then the acres rented to others or worked on shares by others were subtracted from that sum. The results represent "Land in farms." The number of acres in a managed farm is the difference between the total land managed and the managed land rented to others or worked on shares by others.

In the 1950 and later censuses, enumerators were instructed to record total figures for land owned, land rented from others, and land managed for others, including any part of the land that was rented to others. In censuses prior to 1950, enumerators were instructed to ex-

clude all land rented to others and to record only that portion of the acreage owned, rented from others, or managed for others that was retained by the farm operator. Thus, the figures for the individual tenures of land are not entirely comparable except for the 1950 and later censuses. However, the land included in each farm was determined on essentially the same basis for all censuses.

Although the area designated land in farms consists primarily of agricultural land—i.e., land used for crops, pasture, or grazing—it also includes areas of land not actually under cultivation nor used for pasture or grazing. For example, woodland and wasteland owned or rented from others was included as land in farms unless reports indicated it was being held for nonagricultural purposes.

Land owned—This item includes all land that the operator and/or his wife held under title, purchase contract, homestead law, or as heir or trustee of an undivided estate at the time of enumeration.

Land rented to others—This item includes all land that the operator rented or leased to others and all land he assigned to others on shares or rent free. For the most part, the land rented to others represents agricultural land, but it also includes land rented for residential or other purposes. The tenant is considered to be the operator of land leased, rented, or worked on shares, even though his landlord may supervise his operations. The landlord is considered to be the operator of only that portion of the land not assigned to his tenants.

Land rented from others—This item includes not only land the operator rented

APPENDIX A—Continued

or leased from others, but also land he worked on shares for others or land occupied rent free.

Land managed—This item includes all tracts of land managed for one employer or more by a person paid a salary or wages. A hired manager is the operator of the land he manages, since he is responsible for agricultural operations and frequently supervises others in performing those operations. If a hired manager also had agricultural operations of his own, he reported them on the same questionnaire on which he reported the place he managed.

Land Use

Land in farms at the time of enumeration has been distributed according to the way it was used between July 1, 1974, and June 30, 1975. The land uses described in the following paragraphs are mutually exclusive in that each acre of land is counted only once even though it may have had more than one use during the year. Because of the large number of farm operators reporting fractions of acres, the sum of the various uses of land may be off by an acre due to rounding. This is also true for acres of vegetables and field and forage crops harvested.

Harvested cropland—This item refers to all land from which any crops were harvested during the 12-month period between July 1, 1974, to June 30, 1975, whether for home use or sale. It also includes land in field crops that were grazed when mature or almost mature and land in nonbearing fruit or nut trees and plants. Land from which two or more crops were harvested between July 1, 1974, and June 30, 1975, was to be counted only once. Land from which crops were harvested and which was also used for other purposes, either before or after the crops were harvested, was to be reported as cropland harvested without regard to the other uses.

Other cropland—This item includes land from which no crops were harvested between July 1, 1974, and June 30,

1975, but which was occupied by growing crops, excepting fruit or nut trees, intended for harvest in 1975 or later. It also includes land intended for harvest between July 1, 1974, and June 30, 1975, but not actually harvested because of complete crop failure, low prices, labor shortage, or other reasons; land that had been plowed and could be plowed again without first being cleared of brush, but that lay idle throughout July 1, 1974, to June 30, 1975; and land used for soil improvement crops. Other cropland also includes land which was used only for pasture or grazing and which the operator could have used for crops without additional clearing or irrigating. Enumerators were instructed to exclude any land pastured after a crop was harvested from it.

Pasture or grazing land—This item refers to all land used for pasture or grazing between July 1, 1974, to June 30, 1975, except cropland. It includes all woodland where livestock pastured or grazed between July 1, 1974, to June 30, 1975.

Woodland not pastured—This item includes all woodland that was not used for pasture or grazing between July 1, 1974, to June 30, 1975. In the enumerator's reference book, "woodland" was defined as "all farm wood lots or timber tracts, natural or planted; and . . . cutover land with young growth which has or will have value as wood or timber."

Other land—This item refers to all land not included in the other land use classifications, such as house and other building lots, lanes, roads, ditches, land area of ponds and wasteland.

Type of Holding

The purpose of the items under this heading was to classify holdings according to whether they were producing mainly for home consumption or mainly for sale, and to classify the holdings whose production was mainly for sale by the most important types of agricultural production. Production figures for home consumption are based on the disposition

of the agricultural output of the holding during the census year. Agricultural output refers to the part left after rent has been paid to the landlord and/or the part left after deduction of the produce used on the holding for further agricultural production, such as for forage or seed.

Holding producing mainly for home consumption—This type applies to holdings where 50 percent or more of the agricultural output of the holding is consumed by the holder's household.

Holding producing mainly for sale—This type applies to holdings where 50 percent or more of the agricultural output of the holding is produced for sale. Holdings producing mainly for sale were classified further according to their most important activity.

Vegetable holding—is one on which 50 percent or more of the value of sales was from the sale of vegetables.

Fruit and nut holding—is one on which 50 percent or more of the value of sales was from the sale of fruits and nuts.

Dairy holding—is one on which 50 percent or more of the value of sales was from the sale of milk and other dairy products.

Livestock holding—is one on which 50 percent of the value of sales was from the sale of livestock and livestock products, except dairy products.

Poultry holding—is one on which 50 percent or more of the value of sales was from the sale of poultry and poultry products.

Nursery holding—is one on which 50 percent or more of the value of sales was from the sale of nursery products.

Mixed holding—is one on which none of the above items accounts for 50 percent or more of the value of sales.

Other holding—is one that does not belong to any of the previous groups.

APPENDIX A—Continued

Crops Harvested

The 1974 questionnaire was similar to the questionnaires used in previous censuses in that it provided for the collection of data for specified field crops, vegetables, fruits, and nuts harvested on each farm. Inquiries were included for the most commonly grown crops in the Virgin Islands.

Acres—The area for individual crops is reported in acres and tenths of acres harvested. When two or more crops, or two or more plantings of the same crop, were harvested from the same land, the area was to be reported for each separate crop or planting.

For tree fruits and nuts, the figures for acres and for number of trees and plants relate to the time of enumeration. The acreage related to the total area in both bearing and nonbearing fruit trees or plants and planted nut trees of all kinds. The total acres of fruits and nuts were not included in the tabulations when such acreage for a farm was less than fifteen-tenths of an acre. The questionnaire for the 1974 census did not include questions for acreages of each kind of fruits and nuts. The acreage reported for vegetables relates only to the acreage harvested for sale.

Quantity—Data for quantity harvested were obtained for field crops and fruits and nuts. Total quantities of each crop harvested were to be reported, whether the crops were for home use or for sale.

The units of measure in which quantities were to be reported have varied for some crops from one census to another. The aim has been to permit reporting in the units of measure currently in use. In this report, the quantities harvested for each crop are usually expressed in the units of measure given on the 1974 questionnaire. To provide readily comparable information, data published in earlier reports in different units of measure have been converted to the units used for the 1974 census.

Value of Crops Sold

Data for value of crops sold during 1974 were obtained for each kind of vegetable,

total fruits and nuts, total field crops, total ornamental plants, and all other crops sold. The gross value of quantities sold from each farm was to be reported, regardless of who did the selling or shared the receipts. Crops given to a landlord and crops produced on institutional farms for use by inmates of the institution were to be considered as sold. Comparable data for earlier censuses are available only for vegetables for sale.

Livestock and Poultry

Inventories—Data for livestock and poultry relate to the number on hand at the time of enumeration. All livestock and poultry were to be enumerated on the place where they were at the time of enumeration regardless of who owned them. Livestock on unfenced land were to be reported as being on the place where the person who had control over them had his headquarters.

Sales—Data for sales of livestock, milk, and poultry products relate to the 12-month period between July 1, 1974, and June 30, 1975. Enumerators were instructed to report total quantities and gross values regardless of who did the selling or shared the receipts. Products given by a tenant to his landlord and products taken from an institutional farm for use by inmates of the institutional farm were to be considered as sold.

Equipment, Facilities, and Workpower

Equipment and facilities—Data obtained in the 1974 census for the number of motor trucks, tractors, and automobiles on farms are comparable with those presented for earlier years. Farm operators were asked to report the number of each item on their farms at the time of enumeration, regardless of ownership. Items that were temporarily out of order were to be included, but not those that were worn out. Motor trucks include pickup trucks and truck-trailer combinations, and also jeeps and station wagons if they were used primarily as trucks. Tractors include all wheel and tracklaying

(crawler), garden, and homemade tractors. Automobiles include jeeps and station wagons if they were used primarily as passenger cars.

For the 1974, 1970, 1964, and 1960 censuses, data were obtained on presence or absence of electricity, piped running water, and telephones. These facilities were considered to be on the farm if they were available anywhere on the place, whether or not they were in the operator's dwelling. "Piped running water" was defined as "water carried in pipelines by a pressure system or by gravity flow from a natural or artificial source."

Farm wells included all pits or holes made by excavation to reach a supply of water for irrigation, watering livestock, and other purposes. Farm ponds are not included.

Workpower—Workpower refers to those sources used for agricultural activities on the place between July 1, 1974, and June 30, 1975, whether or not the animal or mechanical power used belonged to the operator.

Farm Expenditures and Debt

The 1974 questionnaire contained questions on six items of farm expenditures between July 1, 1974, and June 30, 1975, whether made by the farm operator, his landlord, or both. A farm operator who rented part of his land to others reported only the expenditures on the land he operated himself.

Machine hire and customwork—Expenditures for machine hire and customwork relate to such items as tractor hire, plowing, spraying, and hauling. Any amount spent for the labor involved is considered to be part of the expenditure. The costs of hauling or trucking or of exchange work without pay are omitted.

Hired labor—Expenditures for hired labor include total cash payments made between July 1, 1974, and June 30, 1975, to family members and others for farm labor. Payments to persons supplied by a contractor or a cooperative organization and paid directly by them or by the crew leader are also included. Payments for the

APPENDIX A—Continued

following types of work are excluded: Housework, contract construction work, customwork, and repair and installation work performed by persons specifically employed for the work.

Feed—Expenditures for feed for livestock and poultry include total cash payments made between July 1, 1974, to June 30, 1975, for pasture, salt, condiments, mineral supplements, grain, hay, mill-feeds, and any other items purchased for feeding livestock and poultry on the place. Expenditures made for the grinding and mixing of feed and the estimated cost of items furnished to the operator by a landlord or others are also included. Payments made by a tenant to his landlord for feed grown on the tenant's farm are excluded.

Insecticides, fungicides, and herbicides—This item relates to total cash expenditures between July 1, 1974, and June 30, 1975, for all chemicals, sprays, dusts, etc., used to control weeds, insects, or diseases on crops and livestock. Any of these materials paid for by a landlord and by custom operators is included.

Fertilizer and manure—Expenditures include the total amount spent between July 1, 1974, to June 30, 1975, for manure and commercial fertilizers of all kinds for use on the farm.

Livestock and poultry purchases—This item includes all cash expenditures for livestock and poultry purchased between July 1, 1974, to June 30, 1975, for the place. The cost of livestock and poultry bought and then resold within 30 days is not included.

Farm Operator Characteristics

Age group—For the 1974 census, farm operators were classified by age into six groups. The average age was obtained by dividing the sum of the ages of all farm operators reporting by the number reporting.

Place of birth—In the 1974, 1970, 1964, and 1960 censuses, farm operators were

classified by place of birth according to whether they were born in the Virgin Islands, Puerto Rico, or elsewhere. The purpose of the question on place of birth was to obtain a measure of the native language abilities of farm operators as a guide to agricultural agents in preparing news releases for distribution to farmers. Need for information about language abilities has arisen since the 1950 census as a result of the influx of Puerto Ricans into the Virgin Islands.

Place of residence—Farm operators were classified by residence according to whether or not they lived on the farms they were operating. Some of those who did not live on the farms they operated lived on farms operated by others. Where all the land was rented from others or worked on shares for others, the operator was considered to live on the farm operated provided the dwelling he occupied was included in the rental agreement. In such cases, the dwelling was not necessarily on the land being operated. Similarly, a farm operator who did not live on the land being cultivated or grazed, but who had some agricultural operations (other than a home garden) at his dwelling, was considered to be living on the farm operated.

Main occupation—In 1974 and 1970, farm operators were classified according to whether their main occupation was agricultural or nonagricultural. In 1964, they were classified according to their principal occupation or kind of job at which they worked off the farm. The five 1964 classifications were:

1. Farm laborers
2. Skilled laborers
3. Laborers other than farm and skilled
4. Professional workers and government employees
5. All other occupations

Years of operating present farm—Enumerators were instructed to report the year a farm operator began to operate the farm, i.e., the first year the operator took continuous charge of his present farm or of any part of it.

Work off farm—The extent to which farm operators rely on nonfarm sources for part of their income is indicated by the number of days worked off the farm during the year. Data for the 1974 census are comparable with those for the censuses of 1970, 1964, and 1960. The 1974 census covers the 12 months from July 1, 1974, to June 30, 1975; the 1964 census covers the 12 months from November 1, 1963, to October 31, 1964; the 1970, and 1960 censuses cover the 12 months from January 1 to December 31, 1969 and 1959. Work off the farm was defined to include work on someone else's farm for pay as well as all types of nonfarm jobs, businesses, and professions, whether the work was done on the farm premises or elsewhere. Exchange work was not included.

Farm Classifications

Farms by size—Farms were classified by size on the basis of the total land area established in each one. According to the census definition, a farm is essentially an operating unit, not an ownership tract. All land operated or managed by one person or partnership represents one farm. In the case of tenants, the land assigned to each tenant is considered a separate farm, even though the landlord may consider his entire landholding to be one unit rather than several separate units.

Farms by tenure of operator—In the 1974 census, farms were classified by tenure of operator on the basis of data reported for land owned, rented from others, worked on shares for others, and managed for others. The same classification was used in the 1970 and 1964 censuses. During the processing operations for the 1974 census, each questionnaire was coded to indicate whether the farm operator was a full owner, part owner, manager, or tenant.

Full owners operate only land they own.

Part owners operate land they own and also land they rent from others.

Managers operate land for others and are paid a wage or salary for their services.

APPENDIX A—Continued

Caretakers or hired laborers are not classified as managers. If a farm operator managed land for others and also operated his own farm, both operations were considered one farm. If he managed land for two or more employers, all the managed land was considered one farm.

Tenants rent from others or work the land they operate on shares for others.

Farms by economic class—The same classification of farms by economic class was used for the 1974, 1970, and 1964 censuses. The economic classifications represent groupings of farms that are similar in characteristics and size of operation. The economic class of each farm was determined on the basis of total value of all farm products sold or on total value and number of days the farm operator worked off the farm. Institutional farms were always classified as "abnormal."

The total value of farm products sold was obtained by adding the reported values of all products sold from the farm. The value of livestock, milk, poultry and eggs, vegetables, fruits and nuts, all field crops, ornamental plants, and all other crops was obtained from the farm operator at the time of enumeration.

Farms were grouped into two major categories, Class 1-7 farms and other farms, on the basis of total value of products sold. In general, all farms with a value of sales amounting to \$2,500 or more were classified as commercial. Farms with a value of sales of \$100 to \$2,499 were classified as commercial only if the farm operator did not work off the farm 100 days or more during the year.

The remaining farms with a value of sales of less than \$2,500 and institutional farms were included in one of the groups of "other farms."

Class 1-7 farms were divided on the basis of the total value of all farm products sold:

- Class 1. \$10,000 and over
- Class 2. \$7,500 to \$9,999
- Class 3. \$5,000 to \$7,499
- Class 4. \$2,500 to \$4,999
- Class 5. \$1,200 to \$2,499
- Class 6. \$500 to \$1,199
- Class 7. \$100 to \$499

For class 5-7 farms, the farm operator did not work off the farm 100 days or more in 1969 or between July 1, 1974, and June 30, 1975.

All other farms were divided into three economic classes:

Residential—Except for abnormal farms, all farms with a value of farm products sold of less than \$100 were classified as "residential," regardless of whether the operator worked off the farm between July 1, 1974, and June 30, 1975. Subsistence or marginal farms are also included in this class.

Part-time—Farms with a value of sales of farm products of \$100 to \$2,499 were classified as "part-time" if the operator worked off the farm 100 days or more between July 1, 1974, and June 30, 1975.

Abnormal—All institutional farms were classified as abnormal, regardless of the value of farm products sold. Institutional

farms include those operated by hospitals, schools, agricultural experimental stations, government agencies, etc.

Farms by type—Class 1-7 farms were also classified by type for the 1974 census. To be classified as a particular type, a farm's sales of a particular product or group of products must amount to 50 percent or more of the total value of all farm products sold. The types of farms and the farm products that represented 50 percent or more of the total value of all farm products they sold are:

Ornamental. Ornamental plants or nursery products.

Vegetable and field crops. Vegetables and field crops.

Fruit and nut. Fruits and nuts and coffee.

Dairy. Milk. For this type, a farm whose value of milk sold was less than 50 percent of the total value of all the farm products it sold was classified as a dairy farm if (a) the value of milk sold was 30 percent or more of the total value of products sold, and (b) the value of milk sold plus the value of cattle and calves sold was 50 percent or more of the total value of all farm products sold.

Livestock. Cattle, calves, hogs, pigs, sheep, lambs, goats, and kids.

Poultry. Chickens, chicken eggs, turkeys, and other poultry.

General. Farms whose cash income was from three or more sources and any other farms not meeting the criteria of the above types.

8. How many unpaid and paid farm hands (including the operator and his family) worked on this place the last 12 months? Total farm hands

150 days or more? (a)	25 to 149 days? (b)	Less than 25 days? (c)
082	1	2
083	1	2

9. What type of operating organization does this place have?
(If you are a manager, specify if working for an individual, partnership, corporation, cooperative, estate, trust, etc.)

- 085 1 Individual
2 Partnership
3 Corporation (Do not include cooperatives)
4 Other (Cooperative, estate, trust, etc.)

10. Is this holding producing mainly for home consumption or sale?

- 093 1 Home consumption – Go to Section 3
2 Sale – Ask item 11

11. If producing mainly for sale, 094 is it one of the following?

1 <input type="checkbox"/> Vegetable holding	6 <input type="checkbox"/> Nursery holding
2 <input type="checkbox"/> Fruit and nut holding	7 <input type="checkbox"/> Mixed holding
3 <input type="checkbox"/> Dairy holding	8 <input type="checkbox"/> Other – Specify
4 <input type="checkbox"/> Livestock holding	
5 <input type="checkbox"/> Poultry holding	

Section 3 > CROPS HARVESTED IN THE LAST 12 MONTHS

Include all crops harvested from July 1, 1974, to June 30, 1975, from the land reported in Section 2, item 5, whether harvested by you or by someone else. Be sure to include the landlord's share. Do not include crops which were a complete failure or which were not harvested because of drought, labor shortage, low prices, or destruction from any cause. Report tenths of an acre, such as 1/10, 3/10, 1-5/10, etc.

• Were any of these FIELD crops harvested on this place in the last 12 months?

1. Dry corn
2. Dry beans
3. Cassava
4. Sweetpotatoes
5. Tanya
6. Yams
7. Sorghum for grain

APPENDIX B Continued

Section 4 → LAND USE IN THE LAST 12 MONTHS

Land is to be reported in ONLY ONE CATEGORY. If two or more uses were made of the same land, report in the first category that applies.

1. How many acres were in crops harvested in the last 12 months? (Can be obtained by adding the acres of the various crops reported in Section 3, items 1 through 34. However, if more than one crop was harvested from the same land, count this land only once for this item.)
2. How many acres were in other cropland? (Include cropland pasture, crop failure, idle and fallow cropland, and cropland used for soil improvement crops.)
3. How many acres were in other pasture or grazing land? (Include woodland pasture; do not include cropland pasture.)
4. How many acres were in woodland? (Do not include woodland pasture.)
5. How many acres were in other uses? (Include house lots, barn lots, lanes, roads, ditches, ponds, and wasteland.)
6. TOTAL LAND (Add entries in items 1 through 5. This total should equal the entry in Section 2, item 5.) →

None	Acres

<input type="checkbox"/>	207

Section 5 → LIVESTOCK AND POULTRY ON THIS PLACE NOW AND NUMBER SOLD IN THE LAST 12 MONTHS

Do you or anyone else have any of the following livestock, regardless of ownership, on this place or were any sold from this place in the last 12 months?

1. Horses and colts, including ponies
2. Mules, asses, and burros of all ages
3. Sheep and lambs of all ages
4. Goats and kids of all ages
5. Hogs and pigs of all ages, including sows and boars
(Must equal sum of a and b below)
 - a. Pigs less than 8 months old
 - b. Hogs and pigs 8 months old or older
6. Cattle and calves of all ages
(Must equal sum of a, b, c, and d below)
 - a. Cows, including heifers that have calved
 - b. Heifers and heifer calves 1 year old and over
(Do not include heifers that have calved)
 - c. Bulls, bull calves, steers, and steer calves
1 year old and older
 - d. Calves less than 1 year old

None	How many are on this place now? (a)	How many were sold in the last 12 months? (b)
