# Guide to the 1987 Census of Agriculture and Related Statistics

### **ACKNOWLEDGMENTS**

This guide was prepared by **Michael A. Hovland**, under the general direction of **Frederick G. Bohme**, Chief, Census History Staff, Data User Services Division.

Technical review and consultation were provided by Census Bureau staff members concerned with the economic and agriculture censuses and surveys, including **Paul T. Zeisset**, Special Assistant to the Assistant Director for Economic and Agriculture Censuses; **Thomas L. Mesenbourg**, Chief, Economic Census

Staff; Charles P. Pautler, Jr., Chief, Agriculture Division; and Douglas J. Miller, Chief, Data Requirements and Outreach Branch of the Agriculture Division.

The staff of the Publications Services Division, Walter C. Odom, Chief, performed publication planning, design, composition, editorial review, and printing planning and procurement. Debeorah L. Callison provided publication coordination and editing.

# 1987 Census of Agriculture

### Guide to the 1987 Census of Agriculture and Related Statisitics

## **Change Sheet**

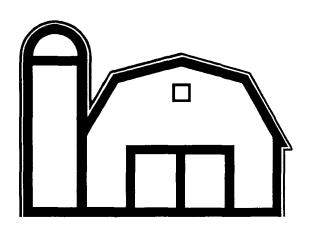

October 2, 1989

Replace "Farm Definition" for Puerto Rico and the Outlying Areas, page 2.

### New wording:

Farm Definition — The farm definitions for the 1987 agriculture censuses in Puerto Rico and the outlying areas were based on value of sales of agricultural products. For the 1987 census in Puerto Rico, a place qualified as a farm if it had, or normally would have had, \$500 in total value of sales of agricultural products during the census year or 10 cuerdas or more from which \$100 or more of agricultural products were sold or normally would have been sold during the census year. For Guam, U.S. Virgin Islands, Northern Mariana Islands, and American Samoa, a place qualified as a farm if it had, or normally would have had, \$100 in total value of sales of agricultural products during the census year. Previously, the farm definitions had included places with specified numbers of poultry or livestock, regardless of value of sales. This "old" definition was used in Guam for the enumeration; however, the data for the island were tabulated and published using the "new" definition. The published report included a "bridging" table to enable data users to maintain continuity of specific data sets.

### CHAPTER 1. **General Information**

### INTRODUCTION

The census of agriculture is the only source of statistics on U.S. agriculture showing comparable figures county by county and classifying farms by size, tenure, type of organization, principal occupation and age of operator, market value of agricultural products sold, and, at the State level, Standard Industrial Classification (SIC) code. The 1987 Census of Agriculture program included:

- The 1987 Census of Agriculture for the 50 States
- The 1987 Census of Agriculture for Puerto Rico and the outlying areas (Guam, the U.S. Virgin Islands, American Samoa, and the Northern Mariana Islands (data collection for American Samoa and the Northern Mariana Islands will be carried out as part of the 1990 Census of Population and Housing))
- The 1988 Census of Horticultural Specialties
- The 1988 Farm and Ranch Irrigation Survey
- The 1988 Agricultural Economics and Land Ownership Survey

The Administration, Congress, and Federal, State, and county government organizations, as well as the business community, scientific and educational institutions, and farmer organizations, use census data.

- · U.S. Government agencies use agriculture census data on production, sales, and size and type of farm for calculating such combined measures as gross national product (GNP), farm income estimates, and indexes of productivity and price levels.
- The U.S. Department of Agriculture uses census of agriculture data to establish benchmarks or comparisons for many of its periodic estimates and projections.
- · Administrative and legislative bodies at all levels of government use the census data in developing farm and rural programs and in analyzing the results of such programs.
- · Private businesses, farm cooperatives, and commodity and trade associations rely on the census data as an aid in locating new plants and services and distribution facilities, distributing research resources, forecasting markets, selecting marketing areas, and in other activities that provide better service to the farm community.

 Farm and agriculture-oriented magazines and other news media use census data to provide technical background for news stories and feature articles, to determine their share of the market, and to identify what types of farms they reach.

### LEGAL AUTHORITY AND CONFIDENTIALITY

Title 13, United States Code, requires a census of agriculture in 1988 (covering 1987) and every fifth year thereafter, imposes joint responsibilities on respondents and the Census Bureau, and specifies penalties for noncompliance. The law requires respondents to supply the data requested, while the Census Bureau must maintain the confidentiality of the data supplied. No data may be published that can be used to identify an individual or a particular farm, nor may the data furnished by respondents be used for any but statistical purposes. Only sworn officials or employees of the Census Bureau may have access to the individual census records.

### HISTORICAL BACKGROUND

The 1987 Census of Agriculture is the 23d conducted by the United States. The first agricultural enumeration was carried out in 1840 as part of the Sixth Decennial Census of Population. From 1840 through 1950, an agricultural census was taken as part of the decennial census, while separate agricultural enumerations were conducted in 1925, 1935, and 1945. From 1954 through 1974, agricultural censuses were carried out for years ending in "4" and "9." In 1976, Congress authorized adjusting the data reference year so that it coincided with the economic censuses. This timing established the agriculture census on a 5-year cycle, collecting data for years ending in "2" and "7."

The agriculture censuses obtained data by personalvisit interview until the Census Bureau introduced the mailout/mailback method for the 1969 enumeration. Since 1969, the census has been carried out primarily by mail in the 50 States. The agriculture censuses in Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands continue to use the personal-interview technique.

### THE 1987 CENSUS OF AGRICULTURE FOR THE **50 STATES**

### Scope and Content

The 1987 Census of Agriculture in the 50 States covered all agricultural operations that met the Bureau's definition of a farm. All agricultural operations were asked to provide data on:

Acreage

Crops

Fruits and nuts

Vegetables

Nursery and greenhouse crops

Market value of sales

Land use

Irrigation

Land in government programs

Amount received in cash or payment-in-kind (PIK) certificates from government programs

Livestock and poultry

Animal specialties

Amount received from Government Commodity Credit Corporation (CCC) loans

Type of organization

Characteristics and occupation of operator

Year operator began operating farm

The census requested additional information from an approximate 25-percent sample of operators made up of all operations with expected sales above a certain value and a random sample of all other farms in each county. A 25-percent sample was small enough to limit respondent burden but large enough to provide reliable county-level estimates for:

Use of fertilizers and chemicals Total production expenses Machinery and equipment Market value of land and buildings Interest expense for secured and nonsecured loans Amount received from farm-related income

### **Reference Dates**

The census requested inventory data as of December 31, 1987, and other data (except for a few crops, such as citrus, for which data were collected for the production year) for calendar year 1987.

### **Farm Definition**

The census defined a farm as any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the census year.

### **General Procedures**

The 1987 Census of Agriculture was a mail census; i.e., report forms were mailed to names and addresses assembled in an agriculture census mail list. Cover letters asked addressees to complete the report forms and mail them back to the Census Bureau. Mail and telephone followup to nonrespondents continued over a period of 6 months after the initial mailout.

The report forms were reviewed as they arrived and the data were transferred to computer tape for editing. As each State or area was "closed out" (i.e., once an acceptable overall level of response had been achieved), the data were tabulated with estimates for operations that did not respond, and the data publication for a State or area was prepared.

### Geographic Area Detail

The 1987 Census of Agriculture provides data for the United States, the 50 States, and for more than 3,000 counties or their equivalents. For census purposes, the United States is the 50 States and the District of Columbia (the 1987 Census of Agriculture did not publish a data report for the latter); county equivalents include parishes in Louisiana and census areas in Alaska. The 1987 publication program also includes, for the first time, limited agriculture census data by five-digit ZIP-Code area. State or area totals are aggregates of the county or countyequivalent totals, while the U.S. data are aggregates of the State counts.

### THE 1987 CENSUS OF AGRICULTURE FOR PUERTO RICO AND THE OUTLYING AREAS

### General Information

Legal authority-Puerto Rico, Guam, the Northern Mariana Islands, American Samoa, and the U.S. Virgin Islands were included in the 1987 Census of Agriculture program under authority granted by Title 13, United States Code—Census, and, for Puerto Rico, also by appropriate acts of the Commonwealth legislature.

Farm definition—The farm definitions for the 1987 agriculture census in Puerto Rico and the outlying areas were based on value of sales of agricultural products. For the 1987 census, a place qualified as a farm if it had, or normally would have, \$100 in total value of sales of agricultural products during the census year. Previously, the farm definitions had included places with specified numbers of poultry or livestock, regardless of value of sales, and this "old" definition was used in Guam for the enumeration; however, the data for the island were tabulated and published using the "new" definition. The published report included a "bridging" table to enable users to maintain continuity of specific data sets.

Reference dates—The census collected production and sales data for Guam for the 12 months ending December 31, 1987, and inventory data as of the date of

enumeration. Production and sales data for Puerto Rico and the U.S. Virgin Islands were requested as of June 30, 1988, and inventory data as of the date of enumeration.

Geographic detail—The publication program includes separate reports for each of the outlying areas and for Puerto Rico. In addition to "area level" data, the U.S. Virgin Islands report includes tabulations for the island of St. Croix, and (combined) for the islands of St. Thomas and St. John. The Guam report shows data for the island and for election districts. For Puerto Rico, data are published for the Commonwealth and for municipios.

### **General Procedures**

The agriculture censuses in these areas used field enumerations, with staffs recruited locally. Census Bureau personnel selected and trained the census supervisors (in Puerto Rico, Bureau headquarters employees helped staff the census office as well), who then selected and trained their office staff, crew leaders, and enumerators. The 1987 census made extensive use of minicomputers in the Puerto Rico census office for much of the pre-tabulation processing of the report forms, including those from Guam and the Virgin Islands. (The computer facilities were established in Puerto Rico to process the economic censuses for the Commonwealth, carried out before the agriculture enumeration. The office and equipment were available early enough to begin processing the agriculture report forms from Guam (the earliest census completed).)

# RELATED CENSUSES AND SURVEYS FOR THE 50 STATES

### 1988 Census of Horticultural Specialties

The census of horticultural specialties, conducted every 10 years, is the only source of comprehensive horticultural data for each county and State. For census purposes, a horticulture establishment is defined as an operation growing and selling \$2,000 or more of horticultural products (greenhouse products, outdoor-grown floricultural products, nursery products, mushrooms, and sod) during the census year.

The statistics are collected by mail from horticultural operators. Content of the 1988 report form is the result of consultation between leaders and organizations in the industry and Government agencies.

Tabulations are available by geographic area (counties, States, and the United States) and by subject (market value or horticultural products sold, type of horticulture products, and kind of business). The printed reports are scheduled for release in mid-1990.

### 1988 Farm and Ranch Irrigation Survey

Scope and content—This survey supplements the basic irrigation data collected from all farm operators in the 1987 Census of Agriculture. The survey used a sample to obtain detailed data about on-farm irrigation practices without burdening all farm operators. The survey asked for data on:

Irrigated acreage
Crops—acres, yield, and quantity of water applied
Method of on-farm water distribution
Number of wells
Energy use
Irrigation maintenance costs
Irrigation practices

Data publication—Data will be published for the United States, the 27 States that account for more than 98 percent of all irrigation, including the 17 Western States, and for all water resources areas. These estimates are expected to be available for public use early in 1990.

### 1988 Agricultural Economics and Land Ownership Survey

**Scope and content**—This survey asked agricultural operations to provide data on:

Acreage operated
Agricultural land ownership
Value

Acquisition

Acquisition

Land use

Debt

Source of debt

Purchases and expenditures

Market value of agricultural products sold

Production contracts

Income and expenses from farm-related activities

Real estate taxes

Assets

**Business** 

Household

Off-farm income and work

In addition, landlords were asked to report:

Type of ownership Characteristics of landlords

Economic data were requested for the calendar year 1988 and land ownership data, except a few selected items, as of December 31, 1988.

Data publication—Publication plans call for a printed report and a computer tape file. Some unpublished data series, providing more details than the printed reports, will be available on computer tape by special request.

Data published for each State include: Assets for farm, numbers of operators and landlords, volume of agricultural products sold, income and production contracts for operators, capital purchases and operating expense for landlords and farm operators, farm debt for both landlords and operators, real estate taxes, off-farm income, farm household characteristics, and characteristics of landlords. Highlights of the 1988 Agricultural Economics and Land Ownership Survey will be available on the AgriData Network

and on CENDATA, the Census Bureau's online information service available through the DIALOG and CompuServe systems. Data are scheduled for release in early 1990.

# THE STANDARD INDUSTRIAL CLASSIFICATION SYSTEM

The Standard Industrial Classification (SIC) system classifies economic establishments, including those involved in agricultural production. The agriculture census publications include data for agricultural operations tabulated by SIC code. The SIC system assigns numeric codes to specific economic activities, the focus of each code category narrowing with each additional digit. For example, SIC major group 01 covers agricultural production-crops. Adding the digit "1" gives the SIC group code for cash grains (011). To identify a specific type of grain production, a fourth digit gives the "industry" code, e.g., 0112-rice. A farm is "primarily" engaged in a particular crop production or other agricultural activity if that activity or crop accounts for 50 percent or more of the total value of sales of the farm's agricultural production. If the total value of sales for agricultural products for a farm is less than 50 percent from a single four-digit industry, but 50 percent or more of its sales are derived from two or more industries within the same SIC group (e.g., corn (SIC 0115) and soybeans (SIC 0116)), the farm is classified as a miscellaneous establishment within the SIC industry group (in this case, 011); otherwise it is classified as a "general farm, primarily crops" (SIC 0191).

Data in the economic censuses, except for portions of the census of transportation, are collected and summarized based on the SIC system. The four-digit industry code is generally sufficient for SIC coverage of agricultural production, since it identifies individual types of farms. Some industries, including a number of manufacturing industries closely related to agriculture, require more detailed codes to differentiate between specific products. This has led the Bureau to develop some 1,400 five-digit "product class" SIC codes and about 11,000 seven-digit "product" codes that enable it to break down the major SIC codes to the specific product level. The following illustrates how the system works:

Major group 28: Chemicals and allied

products

Group 287: Agricultural chemicals

Industry 2873: Nitrogen fertilizers

Product class 28731: Synthetic ammonia, nitric acid,

and ammonium compounds

Product 28731 11: Nitric acid (100% HNO<sub>3</sub>)

### **HOW THE DATA ARE PUBLISHED**

The Bureau of the Census publishes data in a variety of media: Printed reports, "flexible" diskettes, computer tape, and compact disc-read only memory (CD-ROM). Printed reports can be purchased from the U.S. Government Printing Office, while the Bureau of the Census is the only source for census data on electronic media. For more information on obtaining Census Bureau products, as well as on reference sources, special tabulations, etc., see Chapter 4, "Obtaining the Data."

### **LEGEND**

- □ Printed report
- Diskette
- O CD-ROM
- Online
- Microfiche
- Available from:
   Superintendent of Documents
   U.S. Government Printing Office
   Washington, DC 20402
   (202) 783-3238
- Available from:
   Customer Services
   Data User Services Division
   Bureau of the Census
   Washington, DC 20233
   (301) 763-4100
- Printed reports—The agriculture census includes separate advance reports for the United States, each State, and each county or county equivalent; final general statistical reports for the United States, each State, Puerto Rico, Guam, and the U.S. Virgin Islands (reports for the Northern Mariana Islands and American Samoa will be published as part of this series sometime after the 1990 population and housing census); separate statistical reports for each of the related censuses and surveys; and subject matter reports covering the coverage evaluation, ranking of States and counties, and so on.
- ♥ Public-use computer tape—The Census Bureau's computer tapes are available in 9-track, 1,600-bpi (bits per inch) or 6,250-bpi recording density, and in either the Extended Binary Coded Decimal Interchange Code (EBCDIC) or the American Scientific Code for Information Interchange (ASCII) recording languages. The unit of issue for the public-use tapes is the file; each file corresponds to a particular geographic or subject matter area.
- Flexible diskettes—Flexible diskettes contain data products in microcomputer format on 5 1/4 inch, high density diskettes (1.2 megabytes). The files are generated for an IBM personal computer and can be used with any compatible microcomputer employing the PC DOS 2.0

- or higher operating system. Advance reports of the 1987 Census of Agriculture and 1988 Farm and Ranch Irrigation Survey will be released on flexible diskettes.
- O Compact disc-read only memory (CD-ROM)—The rigid CD is able to hold about 600 million characters (megabytes), or the equivalent of about 1,500 flexible diskettes or 4 high density computer tapes. The agriculture census data will be available on two CD-ROM's; the State aggregate data will be on one and the county data for 1987, 1982, and 1978 on the second, which also will include the 1987 Puerto Rico data.
- Online access—CENDATA, the Census Bureau's online information service, is available through two information vendors—CompuServe and DIALOG. They will have Advance Reports at the national and State levels from

- the 1987 Census of Agriculture and highlights of the Subject Series, Related Surveys, and 1988 Census of Horticultural Specialties reports. In addition to the highlights of these reports, Advance Reports at county level and press releases will be available online from a third vendor—AgriData Network.
- film containing up to 98 frames (or pages) of tables, text, or other printed material, reduced 24 times from their original size. Many libraries have the equipment needed to read microfiche and produce paper prints of individual pages; this equipment also is available commercially. The census of agriculture reports are not published in microfiche editions, but most final reports from the Census Bureau's other censuses and surveys printed on paper are produced on fiche as well.

# CHAPTER 2. Agriculture Statistics

### THE 1987 CENSUS OF AGRICULTURE

### **General Information**

The 1987 Census of Agriculture publication program consists of

- Advance Reports for each of over 3,000 counties and county equivalents, each State, and the United States.
- Volume 1, Geographic Area Series, State and County Data, is a final report for the United States, each State, Puerto Rico, Guam, the U.S. Virgin Islands, American Samoa, and the Northern Mariana Islands.<sup>1</sup>
- Volume 2, Subject Series, consists of six parts: 1, Agricultural Atlas of the United States; 2, Coverage Evaluation; 3, Ranking of States and Counties; 4, History; 5, Government Payments and Market Value of Agricultural Products Sold; and 6, ZIP Code Tabulations of Selected Items From the 1987 Census of Agriculture.

- Volume 3, Related Surveys, consists of two parts— the 1988 Farm and Ranch Irrigation Survey and the 1988 Agricultural Economics and Land Ownership Survey reports.
- Volume 4 covers the 1988 Census of Horticultural Specialties.

### **Historical Data**

All of the agriculture census reports include historical statistics from one, and sometimes two, preceding censuses. Summary tables on farms, land in farms, and land use in the volume 1 reports usually show historical data from several earlier censuses.

The comparability of historical data may not be exact; the definition of a farm and the method of enumeration used in the census have changed periodically. Users should note any restrictions or explanations about comparability included in the text, or in table footnotes.

### TABLE FROM 1987 CENSUS OF AGRICULTURE, ADVANCE REPORTS

### Farms, Land in Farms, and Selected Items: 1987 and 1982

| Item   | All f   | arms       | Farms with sales of \$10,000 or more |         |  |

<sup>&</sup>lt;sup>1</sup>Agriculture data will be collected for American Samoa and the Northern Mariana Islands in connection with the 1990 Census of Population and Housing, but will be issued as part of the 1987 Census of Agriculture publication program.

### **Published Reports**

Advance Reports, □ \* ♥ ■ + □, series AC87-A-01-000(A) to 56-000(A) (for States) and AC87-01-001(A) to 56-045(A) (for counties).2 Before publishing the final reports, the Census Bureau issues an advance report for each county (or county equivalent) in the United States with 10 farms or more, for each State, and for the United States. The reports present highlights for all farms and farms with sales of \$10,000 or more. Selected data items include number of farms, land in farms, size of farms, land use practices, farm operator characteristics, selected production expenditures, livestock and poultry inventories and sales, and major crops harvested. The reports include comparable data from the 1982 census. The advance reports are published on a flow basis and provide data on major items at the earliest possible date. No advance reports are issued for Puerto Rico, Guam, the U.S. Virgin Islands, American Samoa, or the Northern Mariana Islands.

Volume 1, *Geographic Area Series, State and County Data*, □ \* ♥ ○ +, series AC87-A-1 to 56. Volume 1 includes a United States summary with data for States, and separate reports for each of the 50 States; Puerto Rico (highlights □); and Guam, the U.S. Virgin Islands, American Samoa, and the Northern Mariana Islands (□ \* and highlights □ only). State reports consist of an introductory text and two chapters of detailed statistical tables, one for the State (or area), the second for counties. (The *United States* chapter 1 shows national-level data, while chapter 2 shows summary State-level data.)

The State tables cover all the items collected in the census: Farms, land in farms, and land use and irrigated land: crop production and value of sales: livestock and poultry inventories and sales; selected characteristics of farms operated by females, and by persons of Spanish origin and specified racial groups (i.e., White, Black, Asian and Pacific Islander, and American Indian and Alaska Native); tenure and operator characteristics; value of machinery and equipment; agricultural chemicals used including fertilizer: total production expenses: fuel expenses: Commodity Credit Corporation (CCC) loans: Government payments and other farm related income and characteristics of farms by SIC codes. Tables also show selected 1987 summary State data cross-tabulated by various farm classifications, such as size of farm, tenure of operator, type of organization, market value of agricultural products sold, various operator characteristics (e.g., age and principal occupation), and SIC code.

<sup>&</sup>lt;sup>2</sup>Advance Report series numbers are derived from the Federal Information Processing Standards (FIPS) code list, in which a two-digit code identifies each State. That number, plus a three-digit county code, identifies each county within a State. Advance Report AC87-A, 24-029(A), for example, is the 1987 Census of Agriculture advance report ("(A)") for Maryland's ("24") Kent County ("029"). Users should be aware that FIPS codes are not assigned in strict numerical sequence, nor are they used in the final reports series.

Chapter 2 of the State and county reports presents selected data for all counties for farms, land in farms, land use and irrigated land; farm production expenses; CCC loans. Government payments and other farm related income: tenure and characteristics of operator; machinery and equipment; agricultural chemicals used, including fertilizer; livestock and poultry inventories and sales; farms operated by Spanish origin and by specified racial groups. The counties are listed alphabetically in the column headings. Specific tables show data for counties with three or more farms reporting a particular item. Items shown include various animal specialties (e.g., goats, mink, bees, fish sales, grains, field seeds), nursery and greenhouse products, tenure, farms operated by persons of selected racial groups or Spanish origin, CCC loans by commodity group, etc. The reports combine data for counties with fewer than three farms reporting a given item into an "all other counties" category for the State.

Volume 2, *Subject Series*, series AC87-S-1 to 6. This series consists of six parts:

- Coverage Evaluation, AC87-S-2, 
   — \*, provides national and regional level estimates on the completeness of the census, in both the number of farms missed and selected characteristics of those farms.
- Ranking of States and Counties, AC87-S-3, □ \*, shows
  the ranking of the top 20 States and the top 100 counties
  in the order of importance of most selected items for
  1987. Most tables include comparative data from the
  1982 census. Tables also show cumulative total percent
  of products or other items for the topmost States and
  counties. (Highlights, □.)
- History, AC87-S-4, 

   \*, presents a concise description of the major census operations together with facsimiles of selected data collection forms.
- Government Payments and Market Value of Agricultural Products Sold, AC87-S-5, □ \* ⊕ +, shows detailed data for farms cross-tabulated by combined market value of agriculture products sold and Government payments received, including detailed national data and selected State data. (Highlights, ■ .)
- ZIP Code Tabulation of Selected Items From the 1987
  Census of Agriculture, AC87-S-6, □ \* ♥ +, includes tabulation by ZIP Code for selected items from the 1987 census. Data items include number of farms, land in farms, land in farms by size, market value of agricultural products sold, and market value of agricultural products sold by size, livestock inventory, and selected crops. (Highlights, ♣).)

Volume 3, *Related Surveys*, series AC87-RS-1 and 2. This series consists of two reports:

- 1988 Farm and Ranch Irrigation Survey, AC87-RS-1,

   □ \* ♥ + □ , provides statistics collected from a sample of farm operators drawn from the 1987 Census of Agriculture respondent list. The data supplement the basic irrigation data collected from all farm operators in the census. The publication offers information on acreage irrigated, crops, method of water distribution used in 1987, source of water used, energy use, and irrigation practices.
- 1988 Agricultural Economics and Land Ownership Survey, AC87-RS-2, □ \* ♥ + □, presents economic and land ownership data on farmland owned and leased, land use, amount and source of debt, production contracts, taxes, assets, off-farm income, and, for landlords, type of ownership and owner characteristics.

Volume 4, *1988 Census of Horticultural Specialties*, AC87-HOR-1,  $\square$  \*  $\Theta$  +  $\square$  (highlights). The horticulture specialties report presents tabulations for calendar year 1987 for the United States, States, and counties, on number of establishments, value of sales of horticultural products, type of horticultural products, and kind of business.

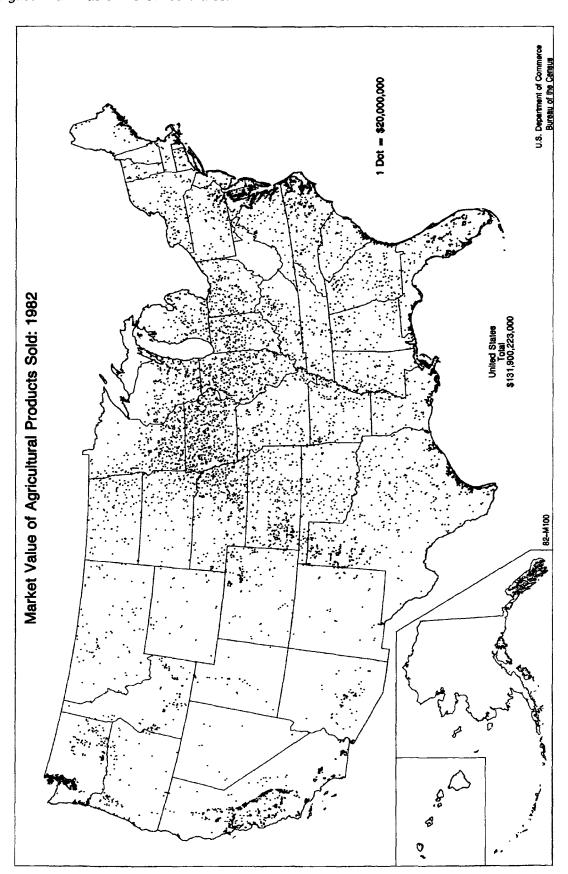

### **CURRENT AGRICULTURE STATISTICS**

The Cotton Ginnings Survey-The Bureau of the Census has carried out annual surveys of cotton ginnings since 1902. Ginning data are reported and collected twice monthly during the ginning season (August through March) for 16 States.3 The Census Bureau publishes the survey results in a series of three reports: The A10-biweekly data on the number of bales ginned by State III (subscription \*, single copies +) = + □; the A20—monthly data on bales ginned for each county with three or more ginning establishments □ (subscription \*, single copies +) ginnings and production for the United States, States, and counties, as well as for the 100 top ginning counties □ \* ■ +. The data published include the number of active and idle gins, average net weight of bales ginned (for the United States and for States), amount of American Pima cotton ginned, percent of total cotton ginned by specific dates (for the United States and for States), and number of cotton gins by State and by number of bales ginned.

(The *Current Industrial Reports* series M22P, Consumption on the Cotton System and Stock, provides additional data on manufacturing establishments dealing with cotton, see page 21.)

<sup>&</sup>lt;sup>3</sup>Covered in 1987-88 were Alabama, Arizona, Arkansas, California, Georgia, Louisiana, Mississippi, Missouri, New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee, and Texas. In addition, data for Kansas (1 gin) and Florida (2 gins) were published under "all other States."

\*For 1987, Agricultural Atlas of the United States.

# CHAPTER 3. Related Statistics

### INTRODUCTION

### **General Information**

The census of agriculture is the major source of production, economic, land value, farm practices, and other information on the agriculture sector of the economy, but the Census Bureau collects related data on the food and fiber system in other enumerations and surveys. These include the economic censuses and related periodic surveys, the census and surveys of governments, and the foreign trade statistics program. The decennial censuses and current population and housing surveys provide sociodemographic information on the farm and rural populations.

### **Census Geography**

Socio-demographic and economic census statistics are compiled for three types of large areas outside the normal geographic hierarchy (State, county, etc.)—metropolitan statistical areas (MSA's), consolidated metropolitan statistical areas (CMSA's), and primary metropolitan statistical areas (PMSA's). The Office of Management and Budget (OMB) established this three-tier system on June 30, 1983, to replace the two former types of metropolitan areas—standard metropolitan statistical areas (SMSA's) and standard consolidated statistical areas (SCSA's). The post-1983 MSA may be considered roughly equivalent to the former SMSA, while the CMSA/PMSA designations provide more detailed definitions of grouped MSA's formerly contained within the SCSA designation.

An MSA is an integrated economic and social unit with a recognized large population nucleus. Generally, an MSA consists of one or more counties (cities and towns in New England) or their equivalents, including a city with a population of at least 50,000 or an urbanized area with a population of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). An MSA may include one or more predominantly agricultural counties. A PMSA consists of one or more counties within a metropolitan complex having a population of at least 1 million people, with demonstrated strong internal economic and social links separate from the ties to other portions of the metropolitan complex. A PMSA, by definition, always is part of a CMSA. A CMSA is essentially an MSA containing one or more PMSA's. At the time of the 1987 agriculture and economic censuses, there were 261 MSA's, 71 PMSA's, and 20 CMSA's in the United States.

Population, housing, and economic census data also are shown for a variety of subcounty geographic units not represented in the agriculture census reports, including incorporated places and census designated places. (Economic data were published for central business districts (CBD's) and major retail centers (MRC's) as well, but these designations were dropped from the publishing program following the 1982 Economic Censuses.)

Survey data usually are limited to estimates for the Nation and sometimes regions and large States or metropolitan areas.

# THE ECONOMIC CENSUSES AND RELATED PROGRAMS

### **General Information**

The economic censuses and current surveys cover establishments<sup>4</sup> engaged in manufacturing, mining, retail trade, wholesale trade, construction, and most transportation and service industries. Agricultural services, as defined in the SIC system (SIC major group 07), are not included in either the agriculture or the economic censuses. Title 13, United States Code, requires that economic censuses be carried out every 5 years for years ending in "2" and "7" and specifies which economic sectors are covered.

The data collected vary by the different industries, but include a number of key measures, such as sales (or receipts or value of shipments), employment, and payroll, in nearly all economic census programs. The censuses provide data for most industries on products sold or services performed, inventories, capital expenditures, and materials consumed.

The Bureau of the Census also carries out an extensive program of data collection from administrative and other records and from periodic economic surveys, most based on probability samples, to provide additional statistics on the Nation's economy. This program includes County Business Patterns (which includes agricultural services), annual and monthly surveys of wholesale trade and retail trade, an Annual Survey of Manufactures, and surveys of transportation.

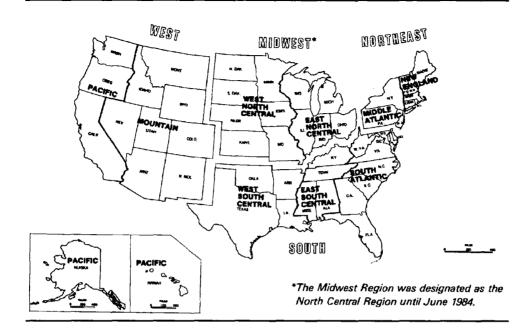

For more detailed data on the economic censuses and surveys data, see the *Guide to the 1987 Economic Censuses and Related Statistics*.

### Sources of Agriculture-Related Information

In the economic statistics program, the censuses and surveys of manufactures, wholesale and retail trades, and transportation, and the County Business Patterns program

<sup>&</sup>lt;sup>4</sup>An establishment is defined, for census and survey purposes, as a business or industrial unit at a single geographic location that produces or distributes goods or performs services.

# CENSUS REGIONS AND GEOGRAPHIC DIVISIONS OF THE UNITED STATES

are the primary sources of economic data related to agriculture. The censuses collected information (see table) on establishments involved in the manufacture and/or sale of products used in agricultural production, processing and/or sale of agricultural products of all kinds, and provision of certain goods and services to farmers and/or their families. The census of manufactures, for example,

collects and publishes information on establishments involved in processing food and kindred products, while the census of retail trade includes food stores.

When selected agriculture-related data from the economic censuses are combined with agriculture census statistics, they provide a more complete picture of the food and fiber sector of the economy.

### **Manufactures**

1987 Census of Manufactures— This census covered manufacturing industries and collected data on employment, payroll and worker hours, inventories, capital expenditures, cost of materials and contract work, resales, fuel and electricity, ownership and control, and products. (The census also collects data on plant characteristics for selected industries.) For the first time, data also were collected on foreign content of materials consumed and offshore assembly of products initially fabricated in the United States.

The publication program for the 1987 Census of Manufactures includes the following report series:

 totals for quantity and value of shipments for the products primary to the industry and the quantity and cost of materials consumed by establishments classified in the industry.

- Preliminary Summary, MC87-SUM, □ \* ♥ ■ + □.
   This report contains general statistics for the 459 manufacturing industries for the Nation, 50 States, the District of Columbia, and selected MSA's with 40,000 or more manufacturing employees.
- Industry Series, MC87-I-20A to -39D, □ \* ♥ ■ +. Each report provides final data for the United States, the 50 States, and the District of Columbia for 1 of 83 groups of related industries. Statistics shown include number of establishments, payroll, payroll supplements, quantity and value of products shipped and materials consumed, capital expenditures, assets, value added, and number of companies. The list on the following page shows final industry reports, by SIC code industry, of most obvious interest to agricultural data users.

<sup>&</sup>lt;sup>2</sup>Size of company.

<sup>&</sup>lt;sup>3</sup>State and metropolitan statistical area data available only in computerized media.

<sup>&</sup>lt;sup>4</sup>Selected States and metropolitan statistical areas.

<sup>&</sup>lt;sup>5</sup>For selected industries only.

<sup>&</sup>lt;sup>6</sup>State and water resources regions.

### Agriculture-Related Preliminary and Final Industry Reports From the 1987 Census of Manufactures

[The preliminary report numbers carry the suffix "(P)," but are otherwise identical to the final report numbers]

Geographic Area Series, MC87-A-1 to 51, □ ■ \*
 ♥ ■ ○ +. Fifty-one reports, one for each State and the District of Columbia, provide summary and detailed statistics for industries for the State, MSA's, counties, and incorporated places with a minimum number of

manufacturing employees. (Some data, including assets, rents, inventories, and cost of materials, are shown in State totals only.)

• Subject Series, MC87-S-1 to 7, □ ■ \*. This series consists of seven separate detailed reports showing national-level data except where noted.

General Summary, MC87-S-1, presents summary totals for industries and product classes. Some data for States and MSA's.

Textile Machinery in Place, MC87-S-2, provides data on the number and type of textile machinery in place in textile mill product establishments.

Water Use in Manufacturing, MC87-S-3, presents data by industry for establishments using 20 million gallons of water or more annually.

Distribution of Sales by Class of Customer, MC87-S-4, includes data on the primary channels of distribution for manufacturers in 1987 based on a survey conducted as part of the 1987 Census of Manufactures.

Type of Organization, MC87-S-5.

Concentration Ratios in Manufacturing, MC87-S-6, presents measures of the share of industrial activity accounted for by the largest companies.

Manufacturers' Shipments to the Federal Government, MC87-S-7, shows data on manufacturing activities for selected Government establishments in the United States. These data are not included in other 1987 Census of Manufactures reports.

Location of Manufacturing Plants, MC87-LM,  $\odot$  0 +, not available in printed form, shows data for States, counties, places of 2,500 inhabitants or more, and by five-digit ZIP Code, by industry, on the number of establishments by employment-size class.

### Current manufactures statistics—

• Annual Survey of Manufactures, M86(AS)-1 to 3, □ ■ ⊕ + . (The Census Bureau publishes the Annual Survey of Manufactures (ASM) for years between censuses. The M86 series covers calendar year 1986.) The ASM collects data from a sample of about 56,000 manufacturing establishments and publishes national statistics, with some State-level data in No. 3. The reports include estimates for industry groups and industries on employment, payroll, production worked hours, value added by manufacture, cost of materials, value of shipments, new capital expenditures, fuels and electric energy, and end-of-year inventories. These data also are shown at the State level with selected data shown by two-digit industry group. The program also covers value of shipments for classes of products.

### TABLE FROM THE 1987 CENSUS OF MANUFACTURES, GEOGRAPHIC AREA SERIES

### Table 7. Statistics by Selected Industry Group and Industry for Selected Counties: 1987

[Includes operating manufacturing establishments and auxiliaries. Includes counties with 950 employees or more and industry groups and industries with 950 employees or more within counties, except those that would disclose data for individual companies. For information on geographic areas followed by  $\Delta$ , general geographic information, and explanation of terms, see appendixes. For meaning of abbreviations and symbols, see introductory text]

Statistics for Industry Groups and Industries, M86(AS)-1 with comparable data for the previous calendar year.

Value of Product Shipments, M86(AS)-2, with comparable data for four previous years.

Geographic Area Statistics, M86(AS)-3, shows data for the United States and States, with comparable data for the previous year.

• Current Industrial Reports (CIR's), III (Subscription or single copies\*, back issues+), = +, also □ where indicated. The various publications series include monthly, quarterly, annual, and biannual reports containing national data. Monthly and quarterly series may have annual summaries; those that do not have separate annual reports.

Most CIR's have SIC-related series numbers. There are several general purpose reports not related to any one SIC

### Wholesale Trade and Retail Trade

The 1987 Censuses of Wholesale Trade and Retail Trade—The census of wholesale trade covers establishments primarily engaged in selling merchandise or acting as agents or brokers for others selling merchandise to retailers; construction contractors; industrial, commercial, institutional, farm, or professional business users; or other wholesalers. The census uses 47 different questionnaires, tailored to particular industries to collect information from wholesale firms with paid employees (those without paid employees are not included in the census).

The census of retail trade covers establishments primarily engaged in selling merchandise for personal or household consumption and providing services incidental to the

sale of those goods. Federal administrative records serve as a source of data on small retail firms for the census, but 36 different report forms, tailored to particular industries, are mailed to those expected to have four or more paid employees.

For details of the data collected and published in the censuses of wholesale and retail trade, see the table on p..

Data available from the censuses of wholesale and retail trade on the following SIC groups may be of particular interest to agricultural census data users:

| Description   |
|---|
|   |
| Farm and Garden Machinery and Equipment                   |
| Grocery and Related Products (nine four-digit industries) |
| Farm-Product Raw Materials (three-digit industries)       |
| Farm Supplies   |
| Tobacco and Tobacco<br>Products                           |
|   |
| Retail Nurseries, Lawn and Garden Supply Stores           |
| Food Stores (seven four-digit industries)                 |
| Gasoline Service Stations                                 |
| Fuel Dealers (three four-digit industries)                |
| Florists  |
|   |

The publication programs for these censuses include equivalent series, (no preliminary reports were issued for the 1987 censuses) as follows:

- Geographic Area Series, WC87-A-1 to 52 (wholesale trade), □ \* �⊙ + □ and RC87-A-1 to 52 (retail trade) □ \* �⊙ + □ . Both series include separate reports for the United States, each State, and the District of Columbia. The wholesale trade reports show basic data on number of establishments, sales, payroll, employment, inventory, and operating expenses. The retail trade reports offer basic information by kind of business, and limited data for 10 major kind-of-business groups for all counties and incorporated places with 2,500 inhabitants or more.

<sup>&</sup>lt;sup>5</sup>Industry and commodity classifications are generally less detailed than manufactures classifications.

Merchandise Line Sales for retail trade; and Commodity Line Sales for wholesale trade ⊕ +); and 4, Miscellaneous Subjects. The reports show national-level data as well as statistics for States and MSA's.

The 1987 Census of Retail Trade publishes three additional reports:

- Special Report Series, RC87-SP, □ \* ♥ ⊙ + 및, provides selected aggregate data on retail trade, including selected ratios and rankings for States and MSA's.
- ZIP Code Statistics Series, RC87-Z, ⊙ ⊕ + , presents data for selected five-digit ZIP Codes, including number of establishments, sales, employment, and number of establishments by sales-size class and employment-size class for selected kind-of-business classifications.
- Nonemployer Statistics Series, RC87-N-1 to 4, □ \* ■ ⊙ ♥ +. This series contains State-level data for the four census geographic regions. Data provided include kind of business on all establishments, establishments with payroll, and establishments without payroll for the United States; and statistics for establishments without

payroll on number of establishments and sales by varied kind-of-business classifications for each State, and within each State, for MSA's, counties, and places with 2,500 inhabitants or more.

Current Wholesale Trade and Retail Trade Statistics-The Census Bureau conducts monthly and annual surveys of wholesale and retail trades and publishes national-level statistics on sales, end-of-month/year inventories, and stock/sales ratios in two report series -- Monthly Wholesale Trade: Sales and Inventories, series BW, and Monthly Retail Trade: Sales and Inventories, series BR, □ (subscription \* or single copies +) = + □; and Annual Wholesale Trade, series BW, and Annual Retail Trade, series BR, III (part of the monthly subscription \* or single copies+) = + . The annual trade reports include national-level data on purchases and gross margins.

### **Transportation Statistics**

The 1987 Census of Transportation and Periodic Surveys— The 1987 transportation statistics program had two main components, the 1987 Census of Transportation

### TABLE FROM 1987 CENSUS OF WHOLESALE TRADE, GEOGRAPHIC AREA SERIES

and the 1988 Truck Inventory and Use Survey (TIUS). The census covered establishments, with paid employees, primarily engaged in motor freight transportation and public warehousing, water transportation, and transportation services. (The census did not cover establishments without paid employees.) The TIUS covered the characteristics and uses of trucks in the United States and in each of the 50 States and the District of Columbia. The survey collected data from a sample of truck owners registered in each State and in the District of Columbia.

The publication program for the census of transportation and the periodic surveys program included the following report series of particular interest to agriculture census data users:

- Selected Transportation Industries, Geographic Area Series, TC87-A-1, □ \* ■ + . Presents final data from selected transportation industries for the United States, each State, the District of Columbia, and selected MSA's on number of establishments, payroll, revenue, and employment by various transportation classifications.
- Selected Transportation Industries, Subject Series, TC87-S-1, □ \*■ +. Provides final data for the United States, each State, and the District of Columbia, and selected

MSA's, based on size of establishment, size of company, and legal form of organization. The report also provides major sources of revenue and purchased transportation expenses for some kinds of business.

Truck Inventory and Use Survey, TC87-T-1 to 52, □
 ★ ■ +. Reports for the United States, each State, and the District of Columbia, show data on the characteristics and use of commercial and private trucks. Statistics include number of vehicles, major use, annual mileage, model year, body type, vehicle size class, type of fuel, maintenance, classification of operator, whether the vehicle is equipped to transport hazardous material, fuel conservation equipment, braking system, and other vehicle equipment.

Current transportation statistics— The Census Bureau conducts annual surveys of motor freight transportation and warehousing. The report series for these surveys, *Motor Freight Transportation and Warehousing Survey*, series BT, □ \*, provides national level estimates of annual operating revenues and selected operating expenses with comparable data shown for the preceding year and year-to-year percentage changes.

### **Enterprise Statistics**

The Census Bureau's enterprise statistics program regroups census data for establishments under common company ownership or control to show economic characteristics of the owning or controlling firms. Each company covered in one of the economic censuses is classified in an enterprise industry category—a grouping of four-digit SIC industries adapted to produce company-aggregate data. The 1987 Enterprise Statistics reports cover retail and wholesale trades, and service, construction, mineral, manufacturing, and transportation industries. The reports generally include data on the number of establishments, number of employees, annual payroll, sales and receipts, capital expenditures, inventory information, and, in some cases, value of fixed assets, operating expenses, and research and development costs. The report series for the program are as follows:

### County Business Patterns (CBP)

This annual program presents intercensal economic data at the State and county levels for agricultural services, forestry, and fisheries; retail trade; wholesale trade; services, including religious organizations; finance, insurance, and real estate; construction; manufacturing; mining; transportation; and other public utilities (except railroads and the U.S. Postal Service).

The data in the CBP reports represent types of employment covered by the Federal Insurance Contributions Act (FICA). The Census Bureau obtains the data from a variety of sources, including Federal administrative records, an annual company organization survey, and the censuses during census years. The basic tabulations exclude selfemployed persons, farm and domestic service workers, railroad employment subject to the Railroad Retirement Act, employment on oceangoing vessels or in foreign countries, and government employees. The published reports show statistics at the four-digit SIC code level for the United States, and at two-, three-, and four-digit levels for States and counties (depending on the magnitude of employment). Basic data items shown include number of establishments, mid-March employment, and first-quarter and annual payrolls. The principal report series is County

### TABLE FROM COUNTY BUSINESS PATTERNS (SOUTH DAKOTA)

Table 2. Counties—Employees, Payroll, and Establishments by Industry: 1986—Con.

[Excludes government employees, railroad employees, self-employed persons, etc. Size class 1 to 4 includes establishments having payroll but no employees during mid-March pay period. (D) denotes figures withheld to avoid disclosing data for individual companies. For meaning of abbreviations and symbols and explanation of terms, see introductory text

Business Patterns, CBP-[year], □ \* ■ • + . A report is issued for the United States, each State, the District of Columbia, and Puerto Rico. The U.S. report includes State totals as well as national data, together with the number of auxiliary establishments for the Nation, with their number of employees and payroll.

Three computer tape files are available from the CBP program; a *United States Summary*,  $\odot$  + , with detailed industry data at the national level; 1B, summaries for States and census geographic divisions; and 2, summaries for counties. These files contain both published and unpublished data for four-digit SIC industries at the national level, for States, and counties. Two-digit SIC data for most SMSA's are available for most years from 1975 on.

### **Quarterly Financial Reports**

This program uses a probability sample (about 11,000 corporations—7,900 manufacturing, 1,700 wholesale, 950 retail, and 450 mining) to provide aggregate national level statistics on U.S. corporations. The estimates include income, assets, liabilities, stockholders' equity, and related financial and operating ratios, classified by industry and asset size. This is the only Census Bureau program collecting profit and loss information. (The Federal Trade Commission produced the *QFR's* until 1982.)

Quarterly Financial Report for Manufacturing, Mining, and Trade Corporations (QFR), 
 □ (subscription\* or single copies+) 
 □ + □ (Beginning with the first quarter of 1988, quarterly financial reports are available on diskette □ + .)

### **Governments**

The 1987 Census of Governments—The Census Bureau conducts censuses of governments every 5 years, for years ending in "2" and "7," to collect financial and employment data on thousands of government units, including Federal, State, county, municipal, and town or township governments, as well as such particular units as school districts (dependent and independent) and special districts. This program includes the District of Columbia and Puerto Rico. Five published series of reports cover the five major subject fields:

- Government Organization, GC87-(1), □ \*. In two parts:
   Part 1, Government Organization; and Part 2, Popularly
   Elected Officials. A list of all local governmental units
   identified in the census (approximately 83,000), by name
   and address, is available ♥ +.
- Taxable Property Values, GC87-(2), □ \*.
- Government Employment, GC87-(3), 
   □ \* ♥ +. In four parts: 1, Employment of Major Local Governments; 2, Compendium of Public Employment, 3, Labor-Management Relations; and 4, Government Costs for Employee Benefits.

- Government Finances, GC87-(4), 
   m \* \* + . In six parts: 1, Finances of Public School Systems; 2, Finances of Special Districts; 3, Finances of County Governments; 4, Finances of Municipal and Township Governments; 5, Compendium of Government Finances; and 6, Employee Retirement Systems of State and Local Governments.
- *Topical Studies*, GC87-(5), □ \*, presents the basic data in different ways.

Current governmental statistics—The Bureau of the Census publishes several periodic reports on various government activities and operations, including annual reports on government employment, finances, finances of selected public employee retirement systems, quarterly summaries of State and local tax revenue, and periodic special studies. The following reports also may be of particular interest to agriculture data users:

- Consolidated Federal Funds Report, Fiscal Year [year], □\* ■ ♥ + . An annual report containing data on Federal. Government expenditures and obligations, in two volumes: 1, County Areas, with statistics covering the United States, the District of Columbia, counties, Puerto Rico and municipios, and outlying areas (American Samoa, Guam, Northern Mariana Islands, and the U.S. Virgin Islands); and 2, Subcounty Areas, with data for the United States, States, counties and subcounty areas (municipalities and townships), Puerto Rico and municipios, and the outlying areas. The report contains statistics on Federal expenditures and obligations for grants, salaries and wages, procurement contracts, direct pavments for individuals, direct loans, guaranteed loans or insured loans, and insurance. (Volume 1 also has total direct spending on defense and nondefense functions.) Dollar amounts reported represent actual expenditures or obligations, by program identification titles and codes and object/assistance type codes. The computer tape file also contains associated geographic codes, 1986 population estimates, and the U.S. congressional district code for each governmental unit.
- Federal Expenditures by State for Fiscal Year [year],

  □■ \* ♥ + . An annual report showing, by State and territory, total Federal grants to State and local governments, salaries and wages, procurement, direct payment to individuals, and certain other major programs—including agricultural stabilization.
- Federal Assistance Award Data System, ⊕ + . Provides quarterly data by State, county, and place on Federal domestic assistance programs, including grants to State and local governments, as well as direct and guaranteed and insured loans to individuals, small businesses, and other qualified recipients; direct payments for a specified use, such as subsidies, or for unrestricted use, such as pensions or veterans' benefits; and insurance or other types of financial assistance.

### Foreign Trade

Agricultural products make up an important part of the United States' foreign trade. The Census Bureau compiles

a broad range of data on imports and exports and publishes a variety of summary and detailed reports. Export data generally are shown by commodity class, net quantity, destination (country or world area), U.S. Customs district of export, method of transportation, and month of export. Import data shown include commodity by net quantity, dutiable status and rate, country and world area of origin, U.S. Customs district of entry, method of transportation, and month of import.

**Summary reports**—Summary reports of special interest to agriculture census data users include the following series:

- FT135, U.S. General Imports and Imports for Consumption—Schedule A—Commodity by Country, □ \* + . Monthly and cumulative.
- FT410, U.S. Exports—Schedule E—Commodity by Country, □ \* = + . Monthly and cumulative year-to-date.
- FT800, U.S. Trade With Puerto Rico and U.S. Possessions, □\* + . Monthly and annual.
- FT900, Summary of U.S. Export and Import Merchandise Trade, □\* + (subscription only). Monthly and cumulative year-to-date.
- FT990, Highlights of U.S. Export and Import Merchandise Trade, □\* + □. Monthly and cumulative year-to-date.

### Detailed reports—

- EM455, U.S. Exports, World Area/Country of Destination—Schedule E—Commodity Groupings, 

  + . Includes method of transportation. Monthly and cumulative year-to-date.
- EM522, U.S. Exports, = + . Shows data on net quantity, value, and shipping weight for schedule B by number, country of destination, and customs district of exportation. Monthly and cumulative year-to-date.
- EM575, U.S. Exports, 

  + Presents data on net quantity
  and value of exports by SIC-based product codes and
  world area of destination. Monthly and cumulative yearto-date.
- EM596, Shipments of Merchandise From the United States to Puerto Rico and U.S. Virgin Islands, + . Monthly and annual (EA 696).
- IM145, U.S. Imports for Consumption and General Imports,
   + . Includes data on net quantity, customs and cost, insurance, and freight value of imports by TSUSA commodity, customs district of entry, and country of origin.
   Monthly and cumulative year-to-date.
- IM146, U.S. Imports for Consumption, = + . Shows data
  on net quantity and value of imports for consumption by
  TSUSA commodity, country of origin, customs value,
  calculated value, rate of duty, and method of transportation. Monthly and cumulative year-to-date.

- IM155, U.S. General Imports, = + . Presents data on value and shipping weight of general imports by schedule A commodity grouping, world area of origin, and method of transportation. Monthly and cumulative yearto date.
- IM160, U.S. General Imports From the U.S. Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands, □ +. Monthly and cumulative year-to-date.

Selected detailed export and import reports are available only through contractual agreements with the Census Bureau's Foreign Trade Division. In addition to the published report series, the Foreign Trade Division can provide a variety of monthly and annual tabulations either singly or on a subscription basis on exports, imports, and shipping in different arrangements and greater detail than are available in the printed materials.

The Guide to Foreign Trade Statistics: 1983, □ \*, and its 1988 supplement □+ contain further information.

### **Population and Housing Statistics**

The population and housing censuses—The Census Bureau carries out population and housing censuses every 10 years in years ending in "0" to provide detailed demographic and socioeconomic data about the Nation's people and their living quarters. The 1980 Census of Population and Housing is the latest of these enumerations completed (as this Guide goes to print, the Bureau of the Census is making preparations for the 1990 censuses); it produced statistics on the United States, census geographic regions and divisions, the 50 States, the District of Columbia, Puerto Rico, Guam, the U.S. Virgin Islands, American Samoa, the Northern Mariana Islands, and the remainder of the Trust Territory of the Pacific Islands. The published reports include data for States, metropolitan areas, counties, cities, and various other political and statistical units down to the size of a city block (in urbanized areas; block-level data also will be available for rural areas from the 1990 census).

The population and housing censuses are not directly concerned with collecting data specifically related to agriculture, but the published statistics on population and housing cover rural as well as urbanized areas, farm and nonfarm population and housing, income, age, and other characteristics of the population, all of which are valuable in any examination of agriculture in the United States. Some data were obtained from "complete count" questions (i.e., for every person and housing unit); other statistics were estimated from responses to questions asked of a sample.

The report series listed below all contain data that are, directly or indirectly, most useful in evaluating the agriculture economy. Detail varies by series, according to subject and geographic coverage. This list includes only those

report series most obviously useful to agriculture data users. For more information on the 1980 census publication program, see the *Census Catalog and Guide*,  $\square$  \*.

- General Population Characteristics, PC80-1-B, 
   m = \*,
   shows complete-count data (i.e., number of persons in
   each household, age, sex, race, etc.) for various geo graphic levels from States down to places with populations of 1,000 persons or more.
- General Social and Economic Characteristics, PC80-1-C, □ \*, including counties and other geographic levels down to places of 2,500 inhabitants or more, and Detailed Social and Economic Characteristics, PC80-1-D, □ \*, for States and for SMSA's of 250,000 inhabitants or more, provide data collected on a sample basis on subjects (such as occupation, income, and commuting), some cross tabulated by age, race, and other characteristics.
- General Housing Characteristics, HC80-1-A, □■\*, contains data for the complete-count housing items—access, number of rooms, kitchen and plumbing facilities, tenure (owned or rented), etc.—tabulated from the State level down to places with 1,000 inhabitants or more, and includes some cross-tabulations by the inhabitants' race or Spanish origin. Some tables display data by urban/rural residence.

TABLE 219. (A) BETAILED OCCUPATION OF EMPLOYED PERSONS BY SEX. RACE. AND SPANISH ORIGIN: 1980 - CON.

- Detailed Housing Characteristics, HC80-1-B, □■\*, covers the sample housing items—heating equipment, farm residence, source of water, sewage disposal, etc.—tabulated down to the level of places with at least 2,500 inhabitants.
- Summary Tape Files (STF's), © + . Nearly all of the population and housing census data appear on computer tapes in greater detail and for smaller geographic areas than in the printed reports. The Census Bureau issues STF's by State, and some data can be obtained on microfiche by county.

The 1980 Census of Population and Housing: Users' Guide, PHC80-R1,  $\square$  \*, contains a text and several supplements, including a glossary and table finding guides.

Current population and housing statistics—The Census Bureau has a variety of survey and population-estimation programs, many sponsored by other Federal agencies, such as the Bureau of Labor Statistics, the Department of the Treasury, and the Department of Housing and Urban Development.

**Population surveys—**The following report series present statistical data drawn from the Bureau's Current Population Survey.

Population Characteristics, P-20, □ \* ■ ⊕ + (some ♣).
 Offers about 15 reports each year, many dealing with such recurring topics as school enrollment, fertility, mobility, and voting. The reports all show data for the United States, but some reports include statistics for regions.

- Special Studies, P-23, 
   □ \* ♥ + (some □ ). Comprises several reports issued each year on such subjects as youth, the aging, female family heads, and travel to work. The geographic detail varies from report to report, most showing national-level data, but many have statistics for regions and divisions, specific MSA's, and, in some cases, counties.
- Population Estimates and Projections, P-25, □ \*
   ♥ + (some ♣). Includes monthly estimates of the U.S. population, projections, and annual estimates by age and components of change (births, deaths, and net migration); annual estimates of State populations by age group and components of change; and periodic population and per capita income estimates for States, counties, governmentally active minor civil divisions, and incorporated places.
- Federal-State Cooperative Program for Population Estimates, P-26, □ \* ♥ + . Presents annual estimates of the population by county and metropolitan area.
- Farm Population, P-27, □\* ⊕ + . Includes annual reports on the number of persons living on farms for the United States and regions, their age and race, and selected characteristics of their employment.
- Consumer Income, P60, □\* ■♥+ . Includes annual reports on money income and poverty status of families and persons, cross-classified by a broad range of demographic and socioeconomic characteristics. Other reports cover characteristics of persons receiving various nonmoney benefits (e.g., food stamps, medical care, public housing, and employer contributions for health and pension plans). The reports include data for the United States and, depending on the specific report, for regions, divisions, and the 20 largest SMSA's/MSA's.

In addition to the Current Population Survey, the Census Bureau conducts the **Survey of Income and Program Participation** (SIPP). The SIPP provides microdata containing basic demographic and social characteristics for each household in the sample. Core data include labor force activity, type and amount of income, and participation in various cash and noncash benefit programs. "Topical modules" of questions are used to collect data on special topics, such as assets, in selected interviews. Data are released for interview periods—called "waves"—covering interviews with approximately 20,000 households. SIPP data are published in the *Household Economic Series*, P-70,  $\square$  \*  $\blacksquare$   $\bigcirc$  +.

Housing Surveys—The Census Bureau carries out a series of current housing surveys, the annual Metropolitan Housing Survey, providing housing statistics in the Current Housing Reports series H-170, Housing Characteristics for Selected Metropolitan Areas; and the biennial American Housing Survey. The latter produces statistics published in the Current Housing Reports series H-150,  $\square^* \cong \Theta^+$  (some  $\square$ ), consisting of six reports that provide data on the size and composition of the housing inventory and related topics. Part E, Urban and Rural Housing Characteristics for the United States and Regions, may be of special interest to agriculture census data users.

### Statistical Compendia

- County and City Data Book (CCDB), 1988, 
   □ \* ♥
   ○ +. (Published every 5 years.) Presents social and economic data from recent censuses and from other Government agencies and private sources. Provides statistics for every city with a population of 25,000 inhabitants or more, as well as all counties and States, and a limited selection of population and income data for all places of 2,500 persons or more. The CCDB serves as a convenient compendium of small-area data from each of the economic censuses and includes selected 1982 Census of Agriculture data.
- State and Metropolitan Area Data Book, 1986 (a Statistical Abstract supplement), □ \* ♥ + (some ). A variety of statistical information for States, census regions and divisions, and metropolitan areas from censuses and 60 other governmental and private agencies. The next edition, tentatively scheduled for 1990 or 1991, will include selected data from the 1987 agriculture census.

# CHAPTER 4. Obtaining the Data

### **GENERAL INFORMATION**

The following sources provide information on the availability and cost of the Bureau's various products:

- Monthly Product Announcement, m + (free), lists publications, data files on computer tape, microfiche, and maps, together with prices and ordering information and forms.

Write or telephone Customer Services, Bureau of the Census, Washington, DC 20233, (301) 763-4100.

Most of the Bureau's published reports are sold by:

\* Superintendent of Documents U.S. Government Printing Office Washington, DC 20402 (202) 783-3238 Public-use computer tapes, diskettes, CD-ROM products, and some published items are obtained from:

+ Customer Services
Bureau of the Census
Washington, DC 20233
(301) 763-4100

Government Printing Office (GPO) and Bureau of the Census order forms are included at the back of this guide.

The Census Bureau can provide **special tabulations** for users with specific requirements not met either by the published statistics or by the public-use tapes. These tabulations are furnished at cost on computer tape or as computer printouts. Requests for information and/or quotations for special tabulations of agriculture census data should be made to:

Chief, Agriculture Division Bureau of the Census Washington, DC 20233

and for other censuses or surveys:

Director Bureau of the Census Washington, DC 20233

The Census Bureau routinely distributes its publications to selected Government offices, public agencies, and certain libraries. Various agencies maintain reference collections of Census Bureau products. In some cases, specific products may be purchased from these agencies.

### **Current and Past Reports**

Government and Census depository libraries (about 1,500 in all; list on request +) are public institutions in various parts of the country, including colleges and universities. Most collections are open to public use and/or available on interlibrary loan. Some of the holdings are on microfiche.

Department of Commerce and Bureau of the Census libraries have the most extensive collections:

U.S. Department of Commerce
Reference Room 7043
Herbert C. Hoover Building
14th St., between Constitution Ave. & "E" St., NW.
Washington, DC 20230

Bureau of the Census Library Reference Room 2475, Federal Bldg. 3 Suitland & Silver Hill Roads Suitland, MD. (mail: Washington, DC 20233) (301) 763-5402

### **Current Reports**

There are State data centers and their affiliates in every State, the District of Columbia, Puerto Rico, and the Virgin Islands. (List on request +.)

Department of Commerce district offices in 59 cities (see local telephone directories for addresses).

Census Bureau regional offices (see list at the end of this section).

### **Public-Use Computer Tapes**

State data centers and their affiliates (see above; list on request+). The Bureau's National Clearinghouse for Census Data Services maintains a list (copy on request+) of organizations that offer tape printouts and other services to their customers.

### ADDITIONAL INFORMATION AND ASSISTANCE

Among the additional sources of information and assistance available to the public through the Bureau of the Census are:

- Information services specialists at the Census Bureau's 12 regional offices (see list at the end of this section) and in Washington (Customer Services, (301) 763-4100) can answer questions about publications and other products, assist users in the access and use of Census Bureau data and in specific applications, and conduct workshops or make presentations for groups interested in Census Bureau programs and products.
- Agriculture subject matter specialists, located at Census Bureau headquarters, also can be contacted concerning specific problems or requests ((301) 763-1113).
- Telephone Contacts for Data Users (free+) is a list of specialists within the Bureau of the Census for over 175 different technical subjects of interest to users.
