PREFACE

Volume II, General Report, is one of the principal reports presenting the results of the 1950 Census of Agriculture and related programs of the Seventeenth Decennial Census. The report, in 13 chapters by subjects, presents the compilation of the information given by farm operators to Census enumerators in 1950. This volume provides statistics relating to the number, acreage, and value of farms; uses of land in farms; farm equipment and facilities; livestock, livestock products; crops; value of farm products sold; and the characteristics of farms and farm operators classified by size of farm, color and tenure of farm operator, type of farm, and economic class of farm. Statistics are presented for the United States, geographic regions and divisions, and for States.

The 1950 Census of Agriculture was taken in conformity with the Act of Congress providing for the fifteenth and subsequent decennial censuses, approved June 18, 1929, as amended.

The collection of the data was carried out by Census enumerators under the direction of supervisors appointed by the Director of the Census and working under the direction of Lowell T. Galt, Chief, Field Division. The planning of the census and the compilation of the statistics were supervised by Ray Hurley, Chief, Agriculture Division, and Warder B. Jenkins, Assistant Chief. They were assisted by Hilton E. Robison, Alvin T. M. Lee, Harold C. Phillips, Floyd W. Berger, Lois Hutchison, Gladys L. Eagle, Orville M. Slye, Henry A. Tucker, Carl R. Nyman, Gaylord G. Green, J. Thomas Breen, David H. Walter, Charles F. Frazier, Elmer O. Rea, Orville C. Demaree, Charlotte C. Heath, Helen C. Leahy, and Helen M. Davenport. The mechanical tabulation, by electrical machines, was made under the supervision of C. F. Van Aken. The maps and charts were prepared under the supervision of Clarence E. Batschelet, Geographer.

Acknowledgment is made of the technical assistance and the loan of technical personnel by the United States Department of Agriculture in the planning, the enumeration, and the compilation of the 1950 Census of Agriculture.

DECEMBER 1952.

UNITED STATES CENSUS OF AGRICULTURE: 1950

REPORTS

Volume I.—Counties and State Economic Areas.—Statistics for counties include number of farms, acreage, value, and farm operators; farms by size, by color and tenure of operator; facilities and equipment, farm labor, and farm expenditures; livestock and livestock products; specified crops harvested; farms and farm characteristics for commercial farms; farms classified by value of farm products sold, by type of farm, and by economic class; and value of products sold by source.

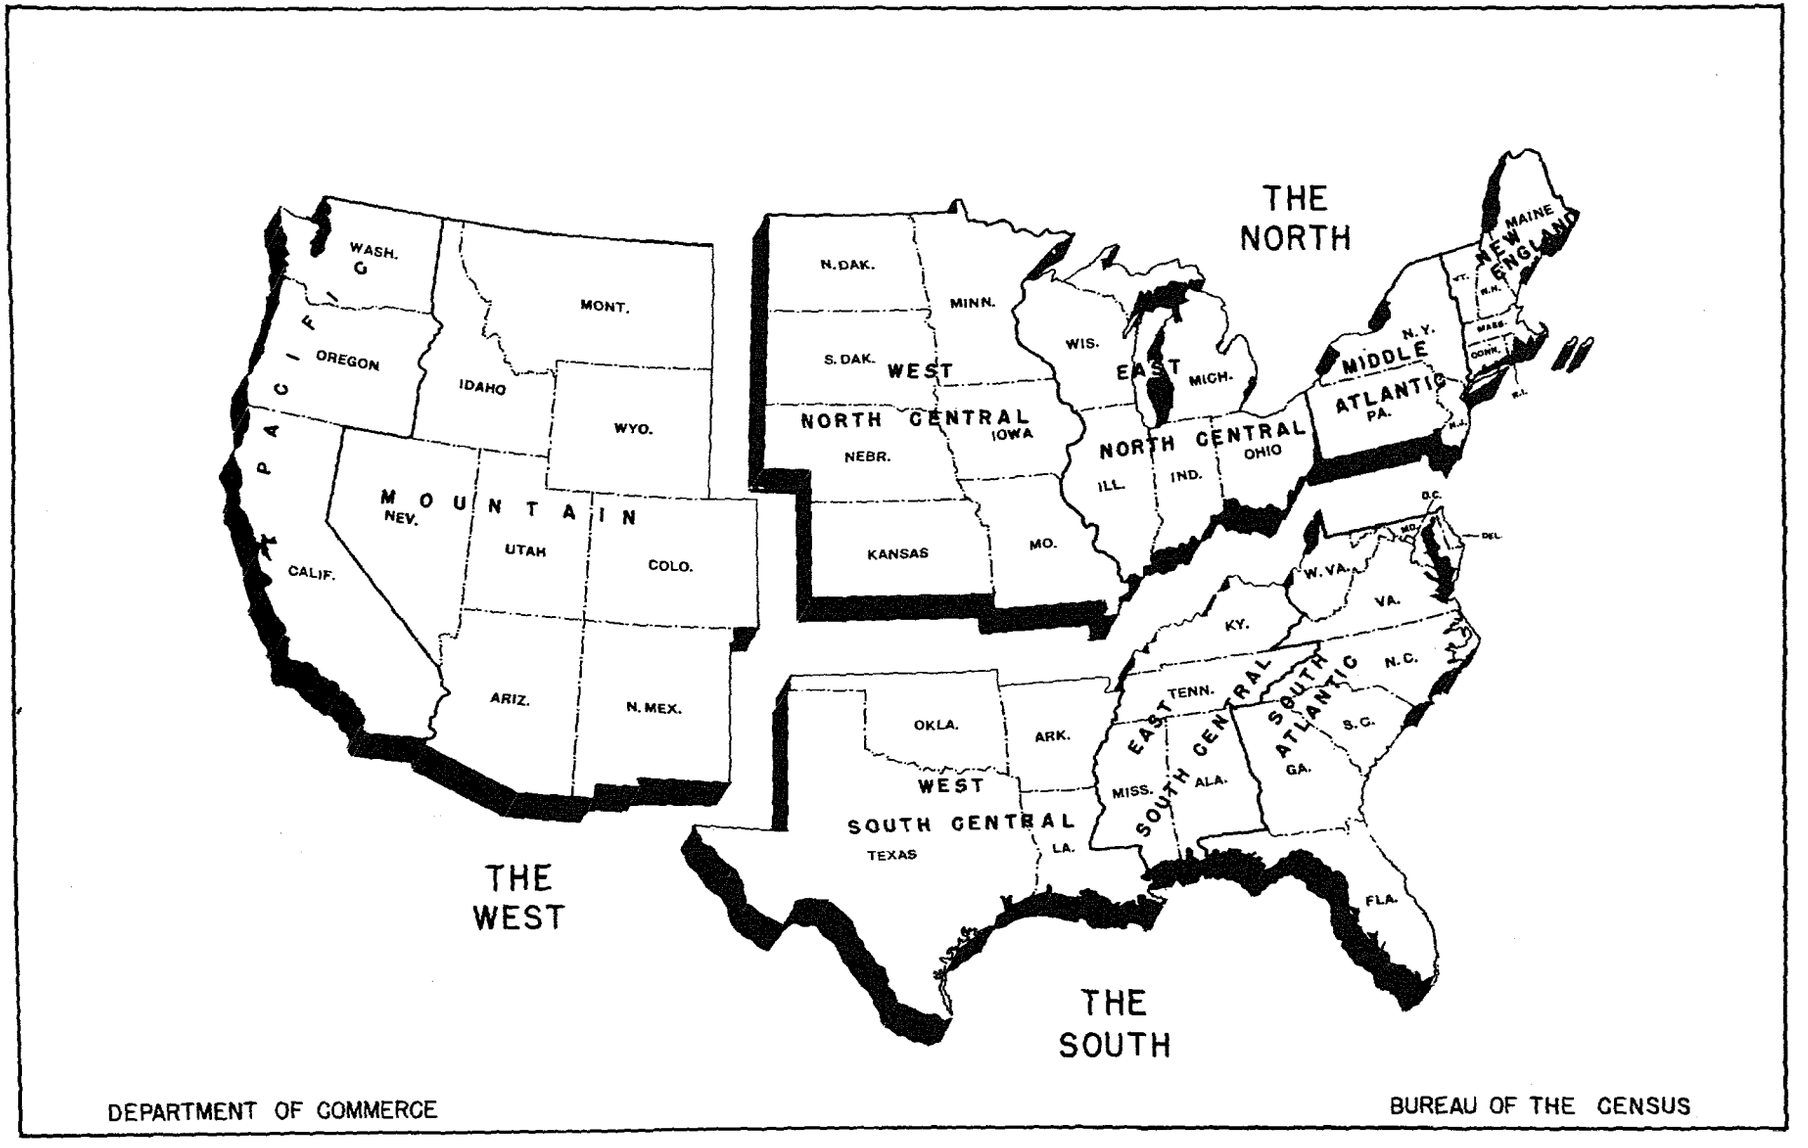
Data for State economic areas include farms and farm characteristics by size of farm, by tenure of operator, by type of farm, and by economic class.

Volume I will be published in 34 parts as follows:

Part	State or States	Part	State or States
1	New England States:		South Atlantic—Continued
	Maine.	15	Virginia and West Virginia.
	New Hampshire.	16	North Carolina and South Carolina.
	Vermont.	17	Georgia.
	Massachusetts.	18	Florida.
	Rhode Island.		East South Central:
	Connecticut.	19	Kentucky.
2	Middle Atlantic States:	20	Tennessee.
	New York.	21	Alabama.
	New Jersey.	22	Mississippi.
	Pennsylvania.		West South Central:
	East North Central:	23	Arkansas.
3	Ohio.	24	Louisiana.
4	Indiana.	25	Oklahoma.
5	Illinois.	26	Texas.
6	Michigan.		Mountain:
7	Wisconsin.	27	Montana.
	West North Central:	28	Idaho.
8	Minnesota.	29	Wyoming and Colorado.
9	Iowa.	30	New Mexico and Arizona.
10	Missouri.	31	Utah and Nevada.
11	North Dakota and South Dakota.		Pacific:
12	Nebraska.	32	Washington and Oregon.
13	Kansas.	33	California.
	South Atlantic:	34	Territories and possessions.
14	Delaware, Maryland, District of Columbia.		

Volume II.—General Report.—Statistics by Subjects, United States Census of Agriculture, 1950. Summary data and analyses of the data for States, for Geographic Divisions, and for the United States by subjects as illustrated by the chapter titles listed below:

Chapter	Title	Chapter	Title
I	Farms and Land in Farms.	VII	Field Crops and Vegetables.
II	Age, Residence, Years on Farm, Work off Farm.	VIII	Fruits and Nuts, Horticultural Specialties, Forest Products.
III	Farm Facilities, Roads, Trading Center, Farm Equipment.	IX	Value of Farm Products.
IV	Farm Labor and Farm Expenditures.	X	Size of Farm.
V	Farm Taxes and Cash Rent.	XI	Color, Race, and Tenure of Farm Operator.
VI	Livestock and Livestock Products.	XII	Economic Class of Farm.
		XIII	Type of Farm.



Volume III.—Irrigation of Agricultural Lands.—State reports with data for counties and drainage basins and a summary for the United States, including number of enterprises, irrigation works and equipment, source of water, new capital investment since 1940, cost of irrigation water, number of farms and acreage irrigated, and quantity of water used for irrigation purposes.

The State reports will be issued as separate parts of Volume III as follows:

Part	State	Part	State
1	Arizona.	10	Nebraska.
2	Arkansas and Oklahoma.	11	Nevada.
3	California.	12	New Mexico.
4	Colorado.	13	North Dakota and South Dakota.
5	Florida.	14	Oregon.
6	Idaho.	15	Texas.
7	Kansas.	16	Utah.
8	Louisiana.	17	Washington.
9	Montana.	18	Wyoming.

Volume IV.—Drainage of Agricultural Lands.—State reports with statistics for counties and a summary for the United States. One part only. Data on land in drainage enterprises, number and types of enterprises, cost of drainage, indebtedness, assessments, and drainage works.

INTRODUCTION

The purpose of this Introduction is to present general information relating to the 1950 Census of Agriculture, to indicate procedures by which the statistics presented in the reports were collected, compiled, and published, and to discuss factors affecting the accuracy and the reliability of the data.

Legal basis for the 1950 Census of Agriculture.—The Seventeenth Decennial Census was authorized by the Act of Congress approved June 18, 1929 (46 Stat. 21; 13 USC 201–218). This Act entitled, "An Act to provide for the fifteenth and subsequent decennial censuses and to provide for apportionment of Representatives in Congress," provided that a census of population, agriculture, irrigation, drainage, distribution, unemployment, and mines should be taken by the Director of the Census in the year 1930 and every 10 years thereafter.

Area.—The 1950 Census of Agriculture included the 48 States, the District of Columbia, Alaska, Hawaii, Puerto Rico, Guam, American Samoa, and the Virgin Islands of the United States. The statistics on agriculture for the territories and possessions are published separately in part 34 of Volume I of the 1950 Census of Agriculture reports, and are not included in this volume.

History of the census of agriculture.—The first national census of agriculture was taken in connection with the Sixth Decennial Census of Population in 1840. Since 1840, a census of agriculture has always been taken in conjunction with each decennial census of population. Congress first provided for a mid-decennial census of agriculture in 1915, but because of World War I this Census was not taken. Congress again provided for a mid-decennial census of agriculture to be taken as of January 1, 1925. Other mid-decennial censuses were taken in 1935 and 1945. Thus, there has been a census of agriculture every fifth year since 1920.

Date of enumeration.—The date of the beginning of the enumeration of the 1950 Census of Agriculture was April 1, as established by the Act of Congress providing for the taking of the decennial census. In most areas of the United States, the actual enumeration was begun on April 1. The size of the enumeration district was planned so that the enumerator could complete an enumeration of a district within four weeks. The average date of enumeration and the percent distribution of agriculture questionnaires enumerated by periods are given in table 1.

The year and the date for the beginning of actual enumeration for the various censuses of agriculture were as follows:

1950—April 1	1925—January 1	1880—June 1
1945—January 1	1920—January 1	1870—June 1
1940—April 1	1910—April 15	1860—June 1
1935—January 1	1900—June 1	1850—June 1
1930—April 1	1890—June 1	1840—June 1

Preparation of questionnaires used for the census of agriculture.—The Act of Congress providing for the Fifteenth Decennial Census of Agriculture authorized the Director of the Bureau of the Census to determine, with the approval of the Secretary of Commerce, the number, form, and subdivision of the inquiries for the census of agriculture. The questionnaire for the 1950 Census of Agriculture was prepared by the staff of the Bureau of the Census on the basis of the experience for prior censuses, on the basis of pretests made during the preparation and planning for the census, and on the basis of the advice of a special advisory committee for the 1950 Census of Agriculture appointed by the Director of the Bureau of the Census. The membership of this committee was as follows:

J. T. Sanders	Legislative Counsel National Grange
Murray R. Benedict	Professor of Agricultural Economics College of Agriculture University of California
Foster F. Elliott	Associate Chief Bureau of Agricultural Economics U. S. Department of Agriculture
W. Eugene Hamilton	Economist American Farm Bureau Federation
Victor Hawkins	Director of Research Capper Publications, Inc., representing the Agricultural Publishers Association
John J. Riggle	Director of Cooperative Services National Council of Farmers' Cooperatives
John F. Timmons	Professor of Economics Iowa State College, representing the American Farm Economic Association
L. M. Walker, Jr. (Replaced by Parke C. Brinkley, May 14, 1951)	Commissioner of Agriculture, State of Virginia, representing the National Association of Commissioners, Secretaries, and Directors of Agriculture
Russell Smith	Legislative Representative Farmers' Educational and Cooperative Union of America

The Special Advisory Committee for the 1950 Census of Agriculture assisted particularly in deciding the inquiries which should be included on the questionnaire for the 1950 Census. During the planning, State colleges, the Department of Agriculture, and other users of data from the census of agriculture were asked to submit suggested inquiries for the census. The number of inquiries recommended to the Bureau of the Census greatly exceeded the number that could be included. The Special Advisory Committee for the 1950 Census of Agriculture and the staff of the Bureau recommended the inclusion and exclusion of these inquiries in the census after giving consideration to possibilities of obtaining the information in some way other than through the Census of Agriculture; to the adequacy of the information that might be secured in the Census of Agriculture; to the availability of data from other sources; to the usefulness of the data, etc. This committee reviewed the plans and questionnaires for the 1950 Census of Agriculture as they were developed, and submitted recommendations regarding these plans and questionnaires.

The over-all plans for the census of agriculture were reviewed by a Census Advisory Committee consisting of seven members appointed from the membership of the American Statistical Association by the board of directors of that organization. The membership of this committee was as follows:

William F. Ogburn	Department of Sociology The University of Chicago Chicago, Illinois
Donald R. G. Cowan	Professor of Marketing School of Business Administration University of Michigan Ann Arbor, Michigan
Murray R. Benedict	Giannini Foundation University of California Berkeley, California
J. Frederic Dewhurst	Twentieth Century Fund New York, New York
Frederick F. Stephan	Department of Economics and Social Institutions Princeton University Princeton, New Jersey

INTRODUCTION

Willard L. Thorp_____ Assistant Secretary of State
Department of State
Washington, D. C.

Ralph J. Watkins_____ Director of Research
Dun and Bradstreet, Inc.
New York, New York

Because of the special interest of the United States Department of Agriculture in the census of agriculture, the Director of the Bureau of the Census also sought the cooperation of that organization in developing plans, questionnaires, and procedures for the 1950 Census of Agriculture. A joint committee of the Bureau of the Census and the Bureau of Agricultural Economics of the United States Department of Agriculture was established in July 1947 for the purpose of coordinating and planning work to be performed by the two agencies. The membership of this committee was as follows:

Bureau of the Census:
A. Ross Eckler, Deputy Director
Ray Hurley, Chief, Division of Agriculture
W. B. Jenkins, Assistant Chief, Division of Agriculture

Bureau of Agricultural Economics:
W. F. Callander, Assistant Chief
Earl E. Houseman, Statistical Assistant, Office of the Chief

Several subcommittees consisting of technical specialists in their respective fields, selected from personnel of the Bureau of the Census and from the various Bureaus of the United States Department of Agriculture, performed much of the detailed work and analysis of problems and recommended procedures for the handling of these problems in the 1950 Census.

The wording of the inquiries on the questionnaire, and the practicability of the procedures to be used in the census, were tested during a series of pretests. The first of these pretests was made in April 1948. This pretest included all the farms in two counties in Missouri and a sample of approximately 2,700 farms in 33 other counties scattered throughout the United States.

The second pretest was made in October 1948 and included all the farms in Carroll and Oldham Counties, Ky., Putnam County, Ill., and Union County, Ind. The third pretest was made in May 1949 and included all the farms in Edgefield County, S. C., and Stephens County, Ga., and a sample of approximately 2,500 farms in approximately 63 other counties scattered throughout the United States. A final test of the training materials and instructions was conducted in October 1949 in Person and Wake Counties, N. C.

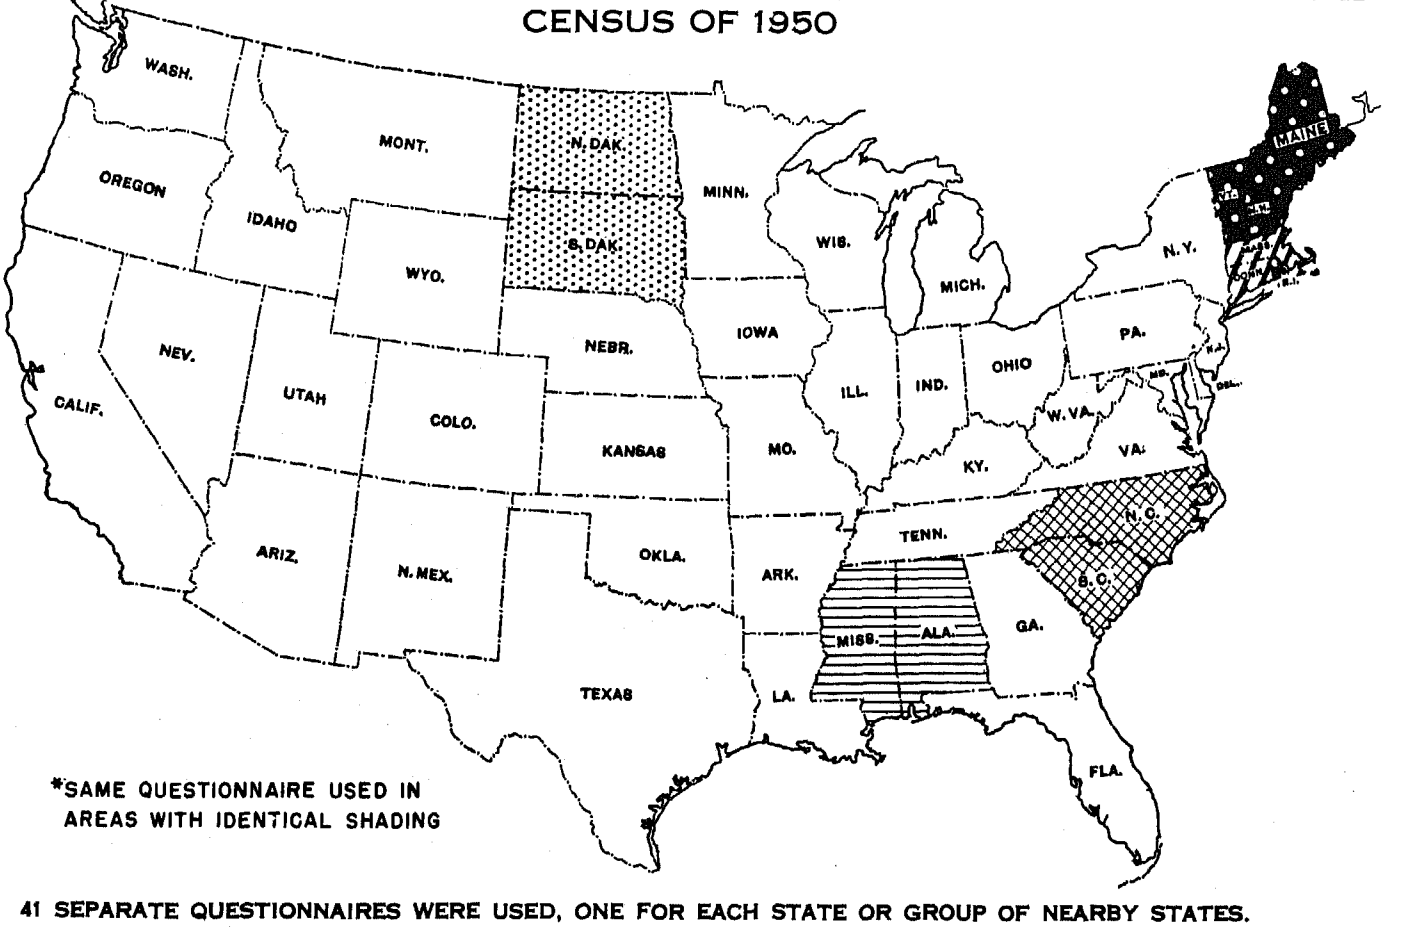
Measures for insuring completeness of enumeration.—Plans for the 1950 Census of Agriculture included several provisions for insuring the completeness of the coverage of the census of agriculture.

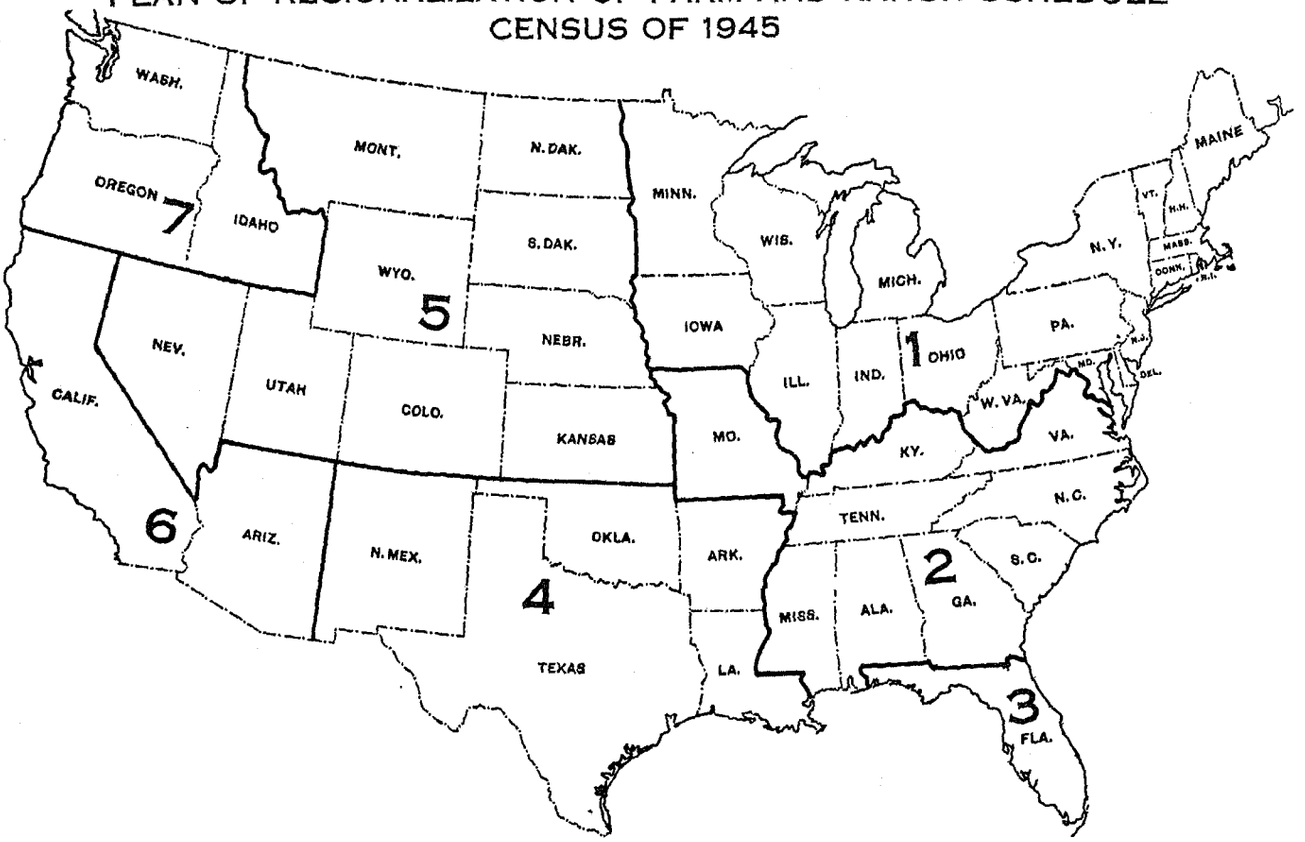
First, the census of agriculture was taken in conjunction with the censuses of population and housing. The questionnaire used for the 1950 Census of Population contained two possible inquiries for every family enumerated. One of these questions was, "Is this house on a farm?" In case the answer to this inquiry was "No," the second inquiry, "Is this house on a place of three or more acres?", was asked. If the answer to either of these questions was "Yes," the census enumerator was instructed to obtain an Agriculture Questionnaire (Form A–1) from the person in charge of the place. This procedure was used in order to insure the enumeration of places not locally considered as farms, but with sufficient agricultural production to qualify as farms according to the Census criteria. The use of these questions resulted in the securing of a considerable number of questionnaires for places that were not counted as farms. (See "Effect of change in the definition of farm.")



Second, enumerators in rural areas were instructed to indicate on their maps the location of every dwelling place and farm. This procedure was intended to assist crew leaders and supervisors in determining that enumerators had visited all places in the enumeration districts assigned to them.

Third, prior to the census, lists of large farms were prepared from the records of the 1945 Census of Agriculture and from records obtained from members of the field staff of the Bureau of Agricultural Economics, U. S. Department of Agriculture. Copies of these lists of large farms were given to census supervisors who were required to check that each farm on the list had been enumerated. The questionnaires obtained for large farms were checked against the list of large farms during the processing in the Washington office. A questionnaire or a satisfactory explanation as to why a questionnaire was not required was obtained for every large farm on the large farm list. (See "Large farms," "page XXXII.)

Fourth, in most of the counties in the South, a special supplementary questionnaire, the Landlord-Tenant Operations Questionnaire (Form A–3), aided in the enumeration of cropper and other tenant farms comprising parts of larger landholdings, plantations, etc. This questionnaire was required when two or more agriculture questionnaires were needed for a landholding. Enumerators were required to list the name of the landlord and also each cropper and other tenant and to give for each listing the information called for on the questionnaire. The procedure used for filling this questionnaire enabled the enumerator to check to determine that all parts of the landholding were enumerated completely and only once.



Questionnaires.—Three different questionnaires were used in connection with the 1950 Census of Agriculture. The Agriculture Questionnaire (Form A–1) was used for the enumeration of all farms. Forty-one separate questionnaires were used for the United States. Each of these questionnaires was used in a State or a group of States. A facsimile of the questionnaire and a composite questionnaire showing the variations in the questionnaire from State to State are given in the Appendix. The use of a separate questionnaire for each State or group of States was initiated in 1940 and was continued in the 1945 and 1950 Censuses of Agriculture. However, a much larger number of separate questionnaires was used in 1950 than in the previous two censuses. The accompanying maps show the States or groups of States for which separate questionnaires were used for the 1950, 1945, and 1940 Censuses of Agriculture. The use of State questionnaires for the 1950 Census of Agriculture reduced the number of questions in many States and eliminated the need for

the farmer or the enumerator to read many questions that did not apply to his farm or area. State questionnaires also provided for the asking of separate questions regarding crops that were important only in the State. The questionnaires were of the interview type. Most of the questions were stated completely and exactly as the enumerator was expected to ask them. This was the first time that an interview type of questionnaire had been used for the census of agriculture. The questionnaire contained the essential instructions needed for filling it out. The inquiries were grouped so that a general question could be asked regarding the presence of a group of items on a farm and if none of these items occurred on the farm, then it was possible for the enumerator and the farmer to skip the detailed inquiries pertaining to that group.

The Special Agriculture Questionnaire (Form A–2) was used in urban areas for the purpose of determining whether an Agriculture Questionnaire (Form A–1) should be filled for the place. This questionnaire was designed for the purpose of minimizing the amount of instructions needed for enumerators working in urban areas. After the enumerator had completed the enumeration of urban districts and turned in his questionnaires, each Form A–2 was examined to determine whether or not the place covered by the questionnaire required the filling of an Agriculture Questionnaire (Form A–1). If a Form A–2 indicated that an Agriculture Questionnaire was required, a specially trained census enumerator was then sent to obtain the required information on an Agriculture Questionnaire (Form A–1).

In 977 counties in the South, a special questionnaire (Form A–3) was used for the enumeration of landlord-tenant operations. The enumerator was required to fill one of these questionnaires for any landholding requiring two or more agriculture questionnaires. This questionnaire was designed for the purpose of insuring a complete and accurate coverage of tenant and other farms in the South and also to provide information for special tabulations for multiple-unit operations in the Southern States. A more detailed description of this questionnaire and of statistics compiled through its use appears in part 2 of Volume V of the reports of the 1950 Census of Agriculture.

The enumeration.—The enumeration was performed by farm operators and census enumerators. About 2 weeks prior to the census date of April 1, 1950, a copy of the agriculture questionnaire was distributed to 8,650,000 box-holders in rural areas and to box-holders in other areas not having city-type mail delivery. These questionnaires were distributed in all States except North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, and 65 of the 75 counties in Arkansas. The copy of the agriculture questionnaire was accompanied by a letter asking farm operators to examine the questionnaire and to answer as many of the questions as possible prior to the visit of the census enumerator. This advance distribution of questionnaires was designed to help both the farm operator and the enumerator, and to obtain more accurate information than in former censuses. Enumerators were required to visit each farm to pick up, complete, or fill the agriculture questionnaire, and to obtain the information required for the census of population and housing. This advance distribution of questionnaires enabled farm operators to become familiar with the kinds of information required for the census and also enabled them to check their records prior to the visit of the census enumerator and to compile any data needed for answering the inquiries on the questionnaire. When the questionnaire was filled out by the farm operator, the census enumerator was required to examine the questionnaire for the purpose of insuring that all necessary entries had been made. Records compiled for a sample of 40 areas distributed throughout the United States showed that approximately one-sixth of the farm operators had completed the filling of their questionnaire and that 24 percent of the farm operators had partially filled their questionnaires by the time of the visit of the census enumerator.

Census enumerators and their supervisors received specialized training prior to the actual beginning of the census. There was 1 local supervisor or crew leader for approximately every 14 enumerators. These crew leaders were given 16 hours of special training in regard to the census of agriculture by means of film strips, recordings, tests, etc. In addition, they were employed for 7 to 12 days for the purpose of checking the boundaries of enumeration districts, recruiting enumerators, and getting acquainted with the area to be enumerated by enumerators under their supervision. Each crew leader provided 8 hours of instruction in regard to the census of agriculture for the enumerators whom he supervised. This special training was given by the use of film strips, the practice filling of agriculture questionnaires, the conduct of a trial interview, and some actual enumeration. Crew leaders were required to visit each of the enumerators to check a sample of the work that had been completed, and to give any additional instructions that appeared to be needed.

In general, census enumerators were assigned areas for which they could complete the enumeration within 4 weeks. The number of farms enumerated by an enumerator averaged approximately 100. Census enumerators began their enumeration on April 1 and continued until the completion of the enumeration of their assigned areas. The enumerator gave the agriculture questionnaires for the area he had enumerated to his crew leader who checked them for completeness before recommending the payment of the enumerator for his work. In approximately 2,700 counties, enumerators were paid a fixed fee for each agriculture questionnaire filled plus 5 cents per mile for the use of their automobiles plus a wage of approximately $1 per hour for the time spent in training sessions. In 307 counties, where farms were widely scattered or travel conditions were difficult, enumerators were paid at an hourly rate for enumeration work and training plus 5 cents per mile for the use of their automobiles.

Enumerators in urban areas were not given detailed instructions regarding the taking of the census of agriculture. They were given brief instructions regarding the filling of the short questionnaire, Form A–2 (see Appendix for facsimile), in case they found a farm or a place containing 3 or more acres in their enumeration districts. Form A–2 questionnaires filled out by enumerators in urban areas were examined by crew leaders or in the District Supervisor's office, and enumerators who had received full instructions regarding the census of agriculture were sent to obtain Agriculture Questionnaires (A–1) for the A–2 questionnaires filled for a farm or for a place of 3 or more acres with agricultural operations. In order to assist supervisors and crew leaders in checking the completeness of the enumeration of places which would qualify as farms in urban areas, a list of approximately 70,000 establishments engaged in the production of flowers, mushrooms, nursery products, etc., was furnished them. Approximately 200,000 A–2 questionnaires were filled by census enumerators. Agriculture questionnaires representing farms (A–1) were obtained for approximately 60 percent of the A–2 questionnaires.

OFFICE PROCESSING

In order to compile the statistics contained in the various reports for the 1950 Census of Agriculture from the questionnaires, it was necessary to perform a series of processing operations in the Washington office. These processing operations were handled as follows:

Receiving and packaging of questionnaires.—The agriculture questionnaires were received from the District offices arranged by counties and enumeration districts within counties. The questionnaires in each county were then arranged by minor civil divisions within the county, counted, and placed in properly labeled cardboard portfolios containing approximately 400 questionnaires each. Questionnaires were kept in this arrangement

and the portfolios of questionnaires for a county formed a unit of work for all subsequent processing operations.

Editing and coding.—Each individual agriculture questionnaire was examined by editing clerks during the office processing. The questionnaires were checked to see that they represented Census farms, that the information was completely reported, and that the figures were legible and were reported in the required units. Codes for various items were entered for the purpose of facilitating the entry on punch cards of figures necessary for the making of cross-classifications of the data. Questionnaires that appeared not to represent Census farms were selected by the editing clerk for reference to technical personnel for final review, and questionnaires that represented large farms were referred to the technical personnel for complete review. The editing clerk also made checks to see that the data were completely and accurately reported. For example, the acreages of the various crops were totaled and the total was compared with the acreage of cropland harvested; the numbers of cattle for each age and sex group were added and the total compared with the total number of cattle. Reports of cents for questions for which the entry was to be in whole dollars were canceled. Likewise reports of fractions of acres for questions for which the entry was to be given in whole acres were corrected.

During the editing, codes were entered on the questionnaire for color of the operator, for tenure of the operator, for size of farm, for irrigation (only in 17 Western States and Arkansas, Louisiana, and Florida), and for economic class of farm and type of farm. The detailed codes for economic class of farm and for type of farm were entered only for a sample of approximately 20 percent of the questionnaires. The work of each editing and coding clerk was reviewed completely until the work was found to be of acceptable quality and thereafter only on a sample basis, unless the quality of the work did not meet the established quality standard.

Punching.—The information for the 1950 Census of Agriculture required a total of 13 punch cards. The column headings for the punch cards are shown in the accompanying chart, and the number of cards punched is given in table 2. The accuracy of the punching was verified by verifying machines. The work of each punching-machine operator was completely verified until the work was of acceptable quality and thereafter only on a sample basis, unless the sample indicated that the quality of the punching was not acceptable. The punching of approximately 20 percent of the cards for the 1950 Census of Agriculture was verified.

TABLE 2.—NUMBER OF PUNCH CARDS SELECTED BY MECHANICAL EDIT FOR FURTHER VERIFICATION, BY CARD TYPE, FOR THE UNITED STATES: 1950 CENSUS OF AGRICULTURE

Card type	Total number of cards (thousands)	Cards selected by mechanical edit	
		Number (thousands)	Percent of total cards
All cards	58,211	4,222	7.3
Land ownership and use:			
A (East)	3,705	139	3.7
A (West)	1,719	52	3.0

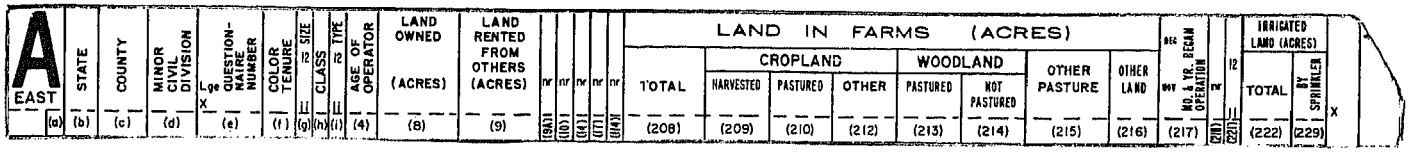
B	1,148	244	21.2
L	1,170	69	5.9
M	1,152	82	7.2

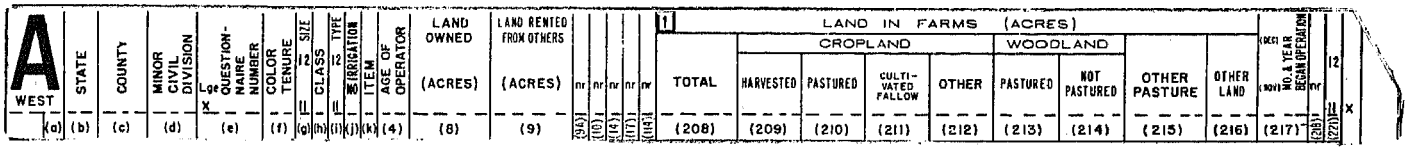
Mechanical editing.—The punch cards were examined by means of electric statistical machines for the purpose of selecting cards that might be in error. Specifications for the selection of cards that might be in error varied from card to card. The specifications for selecting cards for further verification provided for the selection of cards with a large entry for a single item; cards on which the ratio of the punched amount for one item to the punched amount for another item appeared unreasonable, (for example, a crop production of more than 100 units per acre for crops such as corn, wheat, etc.), cards with amounts inconsistent with codes on the same card; cards with essential information missing; and all cards for large farms. The number of cards selected by mechanical editing for each type of card is given in table 2. The information on cards selected by mechanical edit was listed and these listings were checked by clerks working under the direction of technical personnel and cards were corrected when in error.

Tabulation.—The tabulation was performed by means of electric tabulators. The tabulations were divided into two series, one series for counties and the other for State economic areas. In most cases, the tabulations were made to obtain totals and counts for all items for each county. These tabulations were made by using punch cards for all farms in the county. The tabulations for counties usually provided totals for each minor civil division comprising the county. The tabulations for a few items and, in general, all cross-tabulations such as those by size of farm, type of farm, etc., were made only for State economic areas. Usually for these tabulations, only cards for a sample of approximately 20 percent of the farms were used.

Review of tabulations.—All tabulations were reviewed by technical personnel. This review included comparisons with data for prior censuses or with data from other sources; a checking of data for one item against those for another item (for example, the checking of acres against production for a crop); the comparisons of totals and averages for an area with those for nearby areas or minor civil divisions, etc.; the checking of the totals for one tabulation with the totals for other tabulations for the same item; etc. Part of this checking was performed by the technical staff of the Agriculture Division and part by the State Statisticians of the various States loaned to the Bureau of the Census by the Bureau of Agricultural Economics of the U. S. Department of Agriculture.



Processing of data for the sample for the 1950 Census.—The sample used for the 1950 Census of Agriculture consisted of all large farms and one-fifth of all remaining farms. Farms to be included in the sample were selected during the enumeration. The Census enumerator was given a procedure for selecting the farms to be included in the sample and he was instructed not to modify this procedure in any case. He was instructed to include in the sample and to obtain the additional information (answers to questions 306 through 332) for any farm if the questionnaire on which it was to be enumerated had a designated serial number. All agriculture questionnaires given to Census enumerators, as well as those distributed through the mail, carried a serial number. These serial numbers ranged from 1 through 5. The designated serial number of the questionnaire for which the sample information was to be obtained was determined by comparing the serial number of the agriculture questionnaire with the serial number assigned in Washington to the enumeration district.



Crew leaders were instructed to see that the additional information required for farms in the sample was obtained for all farms on the large farm list. During the processing operations in Washington any farm not already in the sample that met the criteria for a large farm was added to the sample and if the necessary information for items to be obtained only for farms in the sample had not been secured, the required data were obtained by mail.

PUNCH CARDS USED FOR THE 1950 CENSUS OF AGRICULTURE

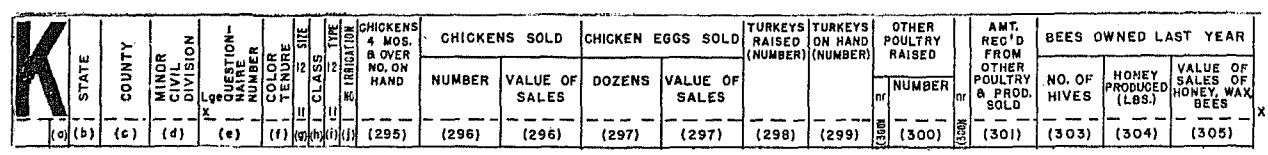
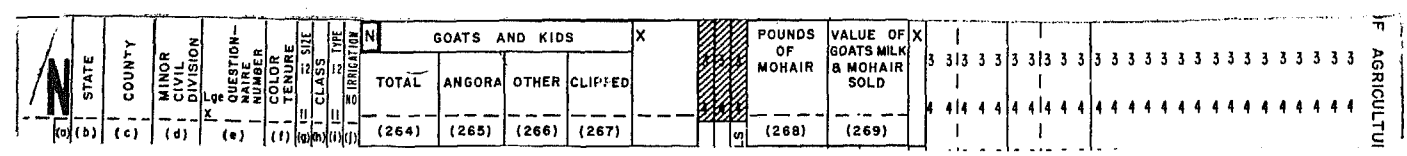
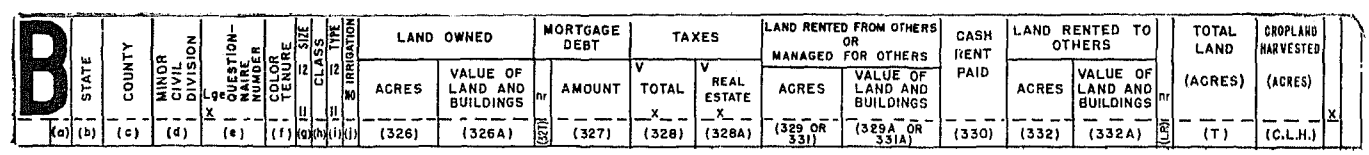
GENERAL REPORT

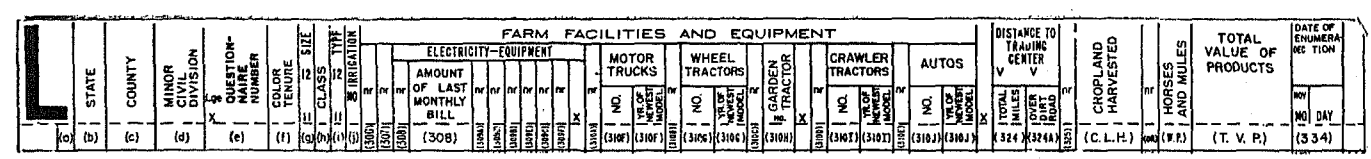


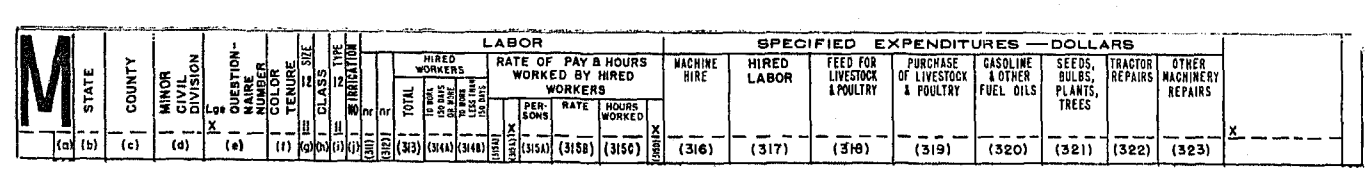
PUNCH CARDS USED FOR THE 1950 CENSUS OF AGRICULTURE—Continued



Livestock and livestock products







(N card used only in Arizona, California, Missouri, New Mexico, Oregon, Texas, and Utah)

Mortgage debt, taxes, farm facilities and equipment, farm labor and expenditures

(B, L, and M cards were used only for farms comprising the sample)

An adjustment in the sample was made for the purpose of (1) improving the reliability of the estimates from the sample by a process essentially equivalent to stratifying the farms in the sample by size and economic class of farm and (2) reducing biases introduced because Census enumerators did not follow perfectly the method outlined for selecting the farms in the sample.

In order to check that the sampling procedure had been followed during the office processing, questionnaires were separated into three groups—large farms, other farms in the sample, and farms not in the sample. For each county, the percent of the total number of nonlarge farms in the sample was computed, and this percent was compared with the expected range in the percentage of number of questionnaires in the sample. The expected range in the percentage of farms in the sample for counties of various size as measured by the number of farms is shown by the accompanying chart. When the number of farms in the sample did not fall within the expected range, adjustments were made by decreasing the number of farms in the sample by eliminating questionnaires selected at random from those in the sample or by increasing the number of farms by adding questionnaires selected at random from the group of nonlarge farms not in the sample. This preliminary adjustment was required for approximately 200 counties.

In general, enumerators had a tendency to include the larger and better farms in the sample. Analyses indicated that more reliable estimates would be obtained if the farms in the sample were in effect stratified by size and by economic class before the estimates were prepared on the basis of the sample. This final adjustment was made at the economic area level rather than at the county level.

In order to adjust the sample for each economic area, counts were obtained of all farms and of sample farms by size and economic class groups. The corresponding counts for the sample were then compared with the number to be expected for the sample (the total count for all farms divided by 5) and an adjustment was made so that the sample count equaled its expected value. Adjustments were made in the sample by eliminating farms when too many were included for a specified class in an economic area or by duplicating farms when too few were included. The farms eliminated or duplicated for a class were selected at random from counties over- or under-represented in the class. The gross adjustments involved were relatively small in most areas, averaging 3 percent eliminated and 2 percent duplicated for all areas in the United States. These adjustments are summarized in table 3.

This adjustment procedure achieved most of the reduction in the sampling errors of the estimates for State economic areas that could have been realized by a more complicated method of estimation by which separate totals would be tabulated by size and economic class groups, estimates prepared group by group on the basis of the actual sampling ratio in the group, and the group estimates combined to provide the estimates for the economic area. This adjustment procedure also tended to reduce the effects of possible biases introduced by failure of some enumerators to follow strictly the rules for selecting the sample farms.

Reliability of estimates based on the sample of farms.—The figures based on the tabulation of data for only a sample of farms are subject to sampling errors. When data based on only a sample of farms are shown in the same table with enumerated data for all farms, the data based on a sample are shown in italics or a note indicates that the data are estimates based on a sample of farms. Approximate measures of the sampling reliability of estimates are given in tables 5, 6, and 7 for farms reporting and for item totals.

These measures indicate the general level of sampling relia-

bility of the estimates, but do not include adequate allowances for sources of error other than sampling variations, as for example, errors in original data furnished by farmers. Sources of error other than sampling may be relatively more important than sampling variation, especially for totals for States or larger areas.

In general, the measures of sampling reliability presented are conservative, in that they tend to overestimate the variations in the sample estimates, because, (1) maximum figures intended to serve for all geographic regions were used and (2) the predicted limits of error do not take into consideration that complete data were tabulated for all large farms. Consequently, there is a tendency to overestimate the variations in the sample, especially for groups for which the totals for large farms represent a high percentage of the item totals. Data for large farms for a number of items are given in table 4. The data in this table indicate for each item the proportion of the region total represented by large farms.

The estimated sampling reliability for number of farms and farms reporting specified items is given in table 5. Data in tables 6 and 7 are given to assist in determining the general level of sampling reliability of estimated totals. In table 7, a list of the items is given and the level of sampling reliability as shown in table 6 is indicated. By referring to table 6 in the column for the level of sampling reliability designated in table 7, the sampling error according to the number of farms reporting may be obtained. Tables 5 and 6 show percentage limits, such that the chances are about 2 in 3 that the difference between the estimates based on the sample and the figures that would have been obtained from a tabulation for all farms would be less than the limit specified. However, the chances are 99 in 100 that the difference would be less than two and one-half times the percentage limit given in the table.

The data in tables 5 and 6 indicate that when the number of farms reporting specified items is small, the item totals are subject to relatively large sampling errors. Nevertheless, the complete detail for every classification for each item is presented to insure maximum usefulness for obtaining estimates for any combinations of items that may be desired. Percentage figures and averages derived from the tables will generally have greater reliability than the estimated totals; also significant patterns of relationship may sometimes be observed even though the individual data are subject to relatively large sampling errors.

Sampling errors for farms reporting were computed by the random sampling formula, assuming a random distribution. However, the assumption of a random distribution is not fully correct because of the adjustments made in the sample. While the amount of the sampling error as given could be reduced by the use of a more complicated method of computation, the differences between the results from the method used and the more complicated method would not justify the computation of sampling errors by a more complicated method. Adjustment factors are given in the footnote of table 5 to provide more precise limits when the number of farms or farms reporting an item is greater than 50 percent of the total number of farms.

In order to compute the sampling errors for item totals, State economic areas having similar agricultural and statistical characteristics were grouped together. Twenty such broad groups were selected for the United States. Sample counties from each of the 20 groups were selected and estimates of sampling errors were computed for a large variety of items to provide a basis for estimates of the level of sampling errors. Estimates of sampling errors have been made separately for the North, the South, the West, and the United States totals, by weighting the sampling error by the corresponding item total for each State or geographic region.

All data shown in this report which are based on a sample of farms have been expanded to represent figures for all farms. These expanded figures were obtained by multiplying by five the totals tabulated from the sample for all except the large farms, and adding totals for large farms.

Data on farm facilities and equipment, farm labor, farm expenditures, and value of land and buildings were estimated for each county on the basis of the tabulation of the figures for only a sample of the farms in each county. The same sample of farms was used also for the tabulation of data for these items by State economic areas or for the State. In some cases, the totals compiled for these items from the tabulations made by counties will differ from the totals presented in tables compiled from tabulations made by State economic areas or for States since, as a matter of economy, adjustments were not made in the tabulations

*Not available.

[1]0.05 percent or less.

[2]Totals for States for which data were tabulated for large farms. The totals for States for which data were not tabulated for large farms represented the following proportions of the totals for all farms for the United States:

Wheat.....acres..	0.4	percent
bushels harvested..	0.3	percent
bushels sold..	0.2	percent
Oats threshed.....acres..	0.1	percent
bushels harvested..	0.1	percent
bushels sold..	0.1	percent
Peanuts.....acres..	Less than 0.05	percent
pounds harvested..	Less than 0.05	percent
Cotton.....acres..	Less than 0.05	percent
bales harvested..	Less than 0.05	percent
Tobacco.....acres..	0.4	percent
pounds harvested..	0.4	percent
Sugar beets for sugar.....acres..	14.4	percent
tons harvested..	11.9	percent

[3]Farms reporting are for the most commonly grown kind of wheat in each of the States where there were inquiries for 2 or more kinds of wheat.

[4]Includes only farms reporting burley tobacco for Kentucky and Tennessee.

Table 5.—SAMPLING RELIABILITY OF ESTIMATED NUMBER OF FARMS AND FARMS REPORTING: CENSUS OF 1950

If the estimated number of farms or farms reporting is —	Then the chances are about 2 in 3 that the estimated number would differ from the results of a complete tabulation by less than[1]—
	Percent
25	40
50	28
100	20
250	13
500	8.9
1,000	6.3
2,500	4.0
5,000	2.8
10,000	2.0
25,000	1.3
50,000 or more	Less than 1 percent

[1] In the case of items for which the estimated number of farms or farms reporting constitutes more than 50 percent of all farms in the universe, more precise limits may be obtained by multiplying the percent difference given in the table by an approximate factor as follows:

When the number of farms or farms reporting constitute (percent)—	*Multiply given limit by—*
50	0.75
75	.50
90	.30
95	.20

Table 6.—SAMPLING RELIABILITY OF ESTIMATED ITEM TOTALS FOR STATES, GEOGRAPHIC DIVISIONS, REGIONS, AND THE UNITED STATES FOR SPECIFIED NUMBER OF FARMS REPORTING, BY LEVELS: CENSUS OF 1950

If the estimated total number of farms reporting is—	Then the chances are about 2 in 3 that the estimated item total would differ from the results of a complete tabulation of the item for all farms by less than[1]						
	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7

10,000	2.2	2.5	2.9	3.2	3.8	4.3	4.9
25,000	1.4	1.6	1.8	2.0	2.4	2.7	3.1
50,000	1.0	1.1	1.3	1.4	1.7	1.9	2.2
100,000	.70	.80	.90	1.0	1.2	1.4	1.6
250,000	.44	.49	.57	.63	.75	.85	.98

[1] In the case of items where large farm reports constitute a significant proportion of the item total more precise limits may be obtained by reducing the percent difference given in the table by the proportion of the item total reported on large farms. See table 4 for large farm totals.

when the difference was not great enough to affect the usefulness of the data.

Sample for the 1945 Census.—The sample of farms used in 1945 was only about one-third as large as that used in 1950 and was selected by a different method. In 1945, each county was divided into cross-sections of small areas averaging 2.5 square miles in size and containing about 5 farms each. A sample of 1 out of every 18 of these small areas or sample segments was selected and all farms having their headquarters within the selected areas were designated as sample farms, and were enumerated on questionnaires containing the supplementary questions in addition to the questions asked of nonsample farms. In 1945, as in 1950, the sampling plan provided for the inclusion of approximately 50,000 large farms regardless of their location.

Publication of data.—In general, data from the 1950 Census of Agriculture have been published in both preliminary and final form. Preliminary data for each county and State were released in the form of a four-page preliminary report as soon as possible after tabulation of data for each county and State. A facsimile of one of these reports is shown in the Appendix.

Final figures for the 1950 Census of Agriculture are published in Volumes I, II, and V of the 1950 Census of Agriculture reports. Volume I contains, essentially, all the data tabulated for the 1950 Census of Agriculture for each county, State economic area, and State. This volume is published in 34 parts. Parts 1 through 33 contain reports for each State or group of nearby States, by counties and by State economic areas while part 34 contains data for Alaska, Hawaii, Puerto Rico, Guam, American Samoa, and the Virgin Islands of the United States. The data given in part 34 are less detailed than those for the States, as the questionnaires used for these areas were briefer than those for the continental United States and were adapted to the agriculture of each territory or possession.

Volume II contains a summary of the data for the 1950 Census of Agriculture. It presents data for States, geographic divisions, regions, and for the United States, accompanied by analytical discussions regarding the data, and maps, graphs, etc., showing some of the significant facts indicated by the data.

Volume V comprises several supplementary reports of the 1950 Census of Agriculture. Part 1 of Volume V, "Horticultural Specialties," contains data for a special census of nurseries, greenhouses, and other horticultural-specialty establishments. This special census was limited to farms or establishments reporting the sale of $1,000 or more of any of the three following groups of horticultural-specialty products:

(1) Nursery products (trees, shrubs, vines, ornamentals, etc.).
(2) Flowers and flowering plants.
(3) Vegetables grown under glass, flower seeds, vegetable seeds, vegetable plants, bulbs, and mushrooms.

This special report presents statistics by States and counties regarding the number of establishments, sales, value of individual crops produced, employment, and value of land and buildings for:

(1) Cut flowers and flowering or foliage plants (including vegetables grown under glass and propagated mushrooms).
(2) Nurseries.
(3) Bulb farms.
(4) Flower-seed farms.

Part 2 of Volume V, "Multiple-unit Operations," contains data on the number and characteristics of multiple-unit operations, farms in multiple units, and farms not in multiple units for selected counties and State economic areas for 13 Southern States and 7 counties in southeastern Missouri. A multiple-unit operation is a landlord holding of two or more subunits (Census-defined farms), one of which may consist of land not assigned to croppers or other tenants (home farm), but the other subunit or subunits must represent land assigned to croppers.

Part 3 of Volume V, "Ranking Agricultural Counties," presents data regarding the rank of the leading counties in the United States for 56 items for the 1950 Census of Agriculture.

Part 4 of Volume V, "Land Utilization—A Graphic Summary," contains a summary prepared in cooperation with the Bureau of Agricultural Economics of the United States Department of Agriculture for the uses of land in the United States.

Part 5 of Volume V, "Farm Tenure—A Graphic Summary," provides a summary of farm tenure and changes in farm tenure as shown by the various censuses of agriculture. This special report has been prepared in cooperation with the Bureau of Agricultural Economics of the United States Department of Agriculture.

Table 7.—INDICATED LEVEL OF SAMPLING RELIABILITY OF ESTIMATED TOTALS OF SPECIFIED ITEMS FOR THE REGIONS AND THE UNITED STATES: 1950

[For reliability of estimates by geographic divisions, use the level indicated for the region in which the geographic division is located. For reliability of estimates for States, see State Table 30 in Volume I of the reports of the 1950 Census of Agriculture or use the level indicated for the region in which the State is located]

Part 6 of Volume V, "Agriculture, 1950—A Graphic Summary," presents geographically the significant facts about agriculture shown by the 1950 Census and a summary of important agricultural changes since 1900.

Part 7 of Volume V, "Irrigation, 1950—A Graphic Summary," provides a graphic summary of the important facts regarding irrigation shown by the 1950 Census of Agriculture and Irrigation.

Part 8 of Volume V, "Farm-Mortgage Debt," contains data on farm mortgage indebtedness and interest rates for States and for the United States. This report has been prepared in cooperation with the Bureau of Agricultural Economics of the United States Department of Agriculture.

Part 9 of Volume V, "Economic Class and Type of Farm—A Graphic Summary," presents the significant facts shown by the 1950 Census of Agriculture regarding farms classified by type and economic class of farm.

Part 10 of Volume V, "Farms and Farm Characteristics by Economic Subregions," presents a summary for selected items for the 1950 Census of Agriculture for 119 subregions.

DEFINITIONS

Definitions are presented only for those items for which the table descriptions are considered inadequate. The descriptive terms refer principally to the 1950 Census of Agriculture, although, in general, they are also applicable to earlier censuses. The definitions consist primarily of a résumé of the questionnaire wording, occasionally supplemented by the more essential parts of instructions given to the enumerators. For the exact phrasing of the inquiries and of the instructions included on the questionnaire, reference should be made to the facsimile of the 1950 Agriculture Questionnaire shown in the Appendix.

A farm.—For the 1950 Census of Agriculture, places of 3 or more acres were counted as farms if the value of agricultural products in 1949, exclusive of home gardens, amounted to $150 or more. The agricultural products could have been either for home use or for sale. Places of less than 3 acres were counted as farms only if the value of sales of agricultural products in 1949 amounted to $150 or more. Places operated in 1949 for which the value of agricultural products in 1949 was less than these minima because of crop failure or other unusual situation, and places operated in 1950 for the first time were counted as farms if normally they could be expected to produce these minimum quantities of farm products.

All the land under the control of one person or partnership was included as one farm. Control may have been through ownership, or through lease, rental, or cropping arrangement.

The Census enumerator was not given the definition of a farm. He was instructed to obtain an agriculture questionnaire for every place that the operator considered a farm, for every place of 3 or more acres, whether or not it was considered a farm, and for certain specialized operations regardless of the size of the place. The specialized operations include greenhouses and nurseries, places having 100 or more poultry, or on which 300 or more dozen eggs were produced in 1949, and places with 3 or more hives of bees. Thus, agriculture questionnaires were filled for more places than those that qualified as farms.

The determination as to which reports were to be included in the tabulations as representing farms was made during the processing of the questionnaires in Washington. This procedure was followed in order that uniform criteria could be applied.

For the 1945 and earlier censuses of agriculture, the definition of a farm was somewhat more inclusive. Census enumerators were provided with the definition of a farm and were instructed to fill reports only for those places which met the criteria. From 1925 to 1945, farms for Census purposes included places of 3 or more acres on which there were agricultural operations, and places of less than 3 acres with agricultural products for home use or for sale with a value of $250 or more. For places of 3 or more acres, no minimum quantity of agricultural production was required for purposes of enumeration; for places of under 3 acres all the agricultural products valued at $250 or more may have been for home use and not for sale. The only reports excluded from the tabulations were those taken in error and a few with very limited agricultural production such as only a small home garden, a few fruit trees, a very small flock of chickens, or the like. In 1945, reports for 3 acres or more with limited agricultural operations were retained if there were 3 or more acres of cropland and pasture, or if the value of products in 1944 amounted to $150 or more when there was less than 3 acres of cropland and pasture.

The definition of a farm in the 1920 Census was similar to that used from 1925 to 1940 but was somewhat more inclusive. In that year, farms of less than 3 acres with products valued at less than $250 were to be included, provided they required the continuous services of at least one person.

The change in the definition affected the comparability of the number of farms for 1950 and prior censuses. See "Effect of change in the definition of a farm."

Farm operators.—A "farm operator" is a person who operates a farm, either performing the labor himself or directly supervising it. He may be an owner, a hired manager, or a tenant, renter, or share cropper. If he rents land to others or has land cropped for him by others, he is listed as the operator of only that land which he retains. In the case of a partnership, one member was included as the operator. The number of farm operators is considered the same as the number of farms.

Farms reporting or operators reporting.—Figures for farms reporting or operators reporting, based on a tabulation of all farms, represent the number of farms, or farm operators, for which the specified item was reported. For example, if there were 190,222 farms in a State and only 146,500 had chickens on hand over 4 months old, the number of farms reporting chickens would be 146,500. The difference in the total number of farms, and the number of farms reporting an item, represents the number of farms not having that item, provided the inquiry was answered completely for all farms.

For some of the items, such as the age of operator, for which reports should have been obtained for all farms, figures are given for the number not reporting. These farms, or operators, not reporting indicate the extent of the incompleteness of the reports for the item.

Figures for farms reporting or operators reporting, based on a tabulation for only a sample of farms, represent the total estimated from the sample, not the actual number of farms reporting or operators reporting. In a few cases, the estimated total may exceed the actual number of farms or farm operators in the county or State.

Land owned, rented, and managed.—The land to be included in each farm was determined by asking the number of acres owned, the acres rented from or worked on shares for others, and the acres rented to or worked on shares by others. The acres in the farm were obtained by adding the acres owned and acres rented from or worked on shares by others, and subtracting the acres rented to or worked on shares by others. In case of a managed farm, the person in charge was asked the total acreage managed for his employer. From this total managed acreage was subtracted any of the acreage which was rented to or cropped by others. For 1950, the figures for land owned, land rented from others, and land managed by farm operators include land rented to others by farm operators.

In earlier censuses, the enumerator was instructed to include all land rented from others and to exclude all land rented to others. He recorded only that portion of the acreage owned and the acreage rented from others which was retained by the farm operator. Thus, the land included in each farm was essentially the same as that included in the 1950 Census.

Land owned.—Land owned includes all land which the operator or his wife, or both, hold under title, purchase contract, homestead law, or as one of the heirs, or as a trustee of an undivided estate.

Land rented from others.—Land rented from others includes land worked on shares for others, and land used rent free, as well as all land rented or leased under other arrangements. Grazing land used under government permit was not included.

Land rented to others.—Many farm operators rent land to others. For the most part, this land rented to others represents agricultural lands but it also includes tracts rented for residential or other purposes. When land is leased, rented, or cropped on shares, the tenant or cropper is considered the farm operator even though his landlord may exercise supervision over his operations. The landlord is considered as operating only that portion of the land not assigned to tenants or croppers.

Land area.—The approximate land area reported for 1950 for States and counties is, in general, the same as that reported for the 1945 and 1940 Censuses. Changes since 1940 represent changes in boundary, actual changes in land area due to the construction of reservoirs, etc. The figures for 1940 represent a complete re-measurement of the United States and therefore may be at variance with the figures shown for earlier censuses.

Land in farms.—The acreage designated "land in farms" includes considerable areas of land not actually under cultivation and some land not used for pasture or grazing. All woodland and wasteland owned by farm operators, or included in tracts rented from others, is included as land in farms unless such land was held for other than agricultural purposes, or unless the acreage of such land held by a farm operator was unusually large. If the total acreage of land owned, rented, or managed by a farm operator was 1,000 or more (5,000 or more in the Western States) and less than 10 percent of the total was used for crops, or for pasture or grazing, or was rented to others, any woodland not grazed and any wasteland, in excess of the acreage used for agricultural purposes, were excluded from the farm area.

Except for open range and grazing lands used under government permit, all grazing land was to be included as land in farms. Land used rent free was to be included with land rented from others. Grazing lands operated by grazing associations were to be returned in the name of the manager in charge. All land in Indian reservations used for growing crops, or grazing livestock, was to be included. Land in Indian reservations not reported by individual Indians or not rented to non-Indians was to be reported in the name of the cooperative group using the land. Thus, in some instances the entire reservation was reported as one farm.

CLASSIFICATION OF FARMS

Farms by size.—Farms were classified by size according to the total land area of each farm. The same classification was used for all States.

In analyzing size-of-farm statistics, consideration should be given to the definition of a farm for Census purposes. Census farms are essentially operating units—not ownership tracts. If a landlord has croppers or other tenants, the land assigned each cropper or tenant is a separate farm even though the landlord may operate the entire holding essentially as one farm in respect to supervision, equipment, rotation practices, purchase of supplies, or sale of products.

Farms by tenure of operator.—In the 1950 Census, farm operators are classified according to the tenure under which they hold their land on the basis of the replies to the inquiries on total land owned, total land rented from others, and total land managed for others. In 1945 and earlier, full owners, part owners, and tenants were classified on the basis of the land retained. Under this earlier classification, a part owner who sublets to others all the land he rents from others would have been classed a full owner; a part owner who rents to others all the land he owns would have been classed a tenant.

Full owners own land but do not rent land from others.

Part owners own land and rent land from others.

Managers operate farms for others and are paid a wage or salary for their services. Persons acting merely as caretakers or hired as laborers are not classified as managers. If a farm operator managed land for others and also operated land on his own account, the land operated on his own account was considered as one farm and the land managed for others as a second farm. In the 1950 Census, if a farm operator managed land for two or more employers all the land managed was considered one farm.

Tenants rent from others or work on shares for others all the land they operate. In 1950, tenants are further classified on the basis of their rental arrangement as follows:

Cash tenants pay cash as rent, such as $10 an acre or $1,000 for the use of the farm.

Share-cash tenants pay a part of the rent in cash and a part as a share of the crops or of the livestock or livestock products.

Share tenants pay a share of either the crops or livestock or livestock products, or a share of both.

Crop-share tenants pay only a share of the crops.

Livestock-share tenants pay a share of the livestock or livestock products. They may or may not also pay a share of the crops.

Croppers are crop-share tenants whose landlords furnish all the work power. The landlords either furnish all the work animals or furnish tractor power in lieu of work animals. Croppers usually work under the close supervision of the landowners or their agents and the land assigned them is often merely a part of a larger enterprise operated as a single unit.

The information on work power furnished was tabulated only for the Southern States and seven counties in southeastern Missouri. Therefore, data for croppers are shown only for the Southern States and seven counties in southeastern Missouri.

Other tenants.—Other tenants include those who pay a fixed quantity of any product; those who pay taxes, keep up the land and buildings, or keep the landlord in exchange for the use of the land; those who have the use of the land rent free; and others who could not be included in one of the other specified subclasses.

Unspecified tenants.—Unspecified tenants include those tenants whose rental agreement was not reported.

For earlier censuses, the definition for each subclass of tenants is nominally similar to the corresponding subclass, or subclasses, for 1950. However, in 1945 the enumerator was asked to determine the subclass of tenants, while in 1950, 1940, and earlier censuses the classification was made during the processing of the questionnaires in Washington on the basis of the answer to the inquiries on the questionnaires. The procedure for 1945 may have affected the comparability of the data, particularly those for cash tenants and share-cash tenants.

Farms by color or race of operator.—Farm operators are classified by color as "white" and "nonwhite." Nonwhite includes Negroes, Indians, Chinese, Japanese, and all other nonwhite races.

Farms by economic class.—A classification of farms by economic class was made for the purpose of segregating groups of farms that are somewhat alike in their characteristics. This classification was made in order to present an accurate description of the farms in each class and in order to provide basic data for an analysis of the organization of United States agriculture. Only the farms in the sample (one-fifth of the farms plus all large farms) were classified by economic class. The totals given in the tables represent estimates for all farms based on tabulations of the data for the farms included in the sample.

The classification of farms by economic class was made on the basis of three factors, namely, total value of all farm products sold, number of days the farm operator worked off the farm, and the relationship of the income received from nonfarm sources by the operator and members of his family to the value of all farm products sold. Institutions, experimental farms, grazing associations, and other community projects were classified as abnormal, regardless of any of the above-mentioned factors.

In making the classification of farms by economic class, farms have been grouped into two major groups, namely, commercial farms and other farms. In general, all farms with a value of sales of farm products amounting to $1,200 or more were classified as commercial. Farms with a value of sales of $250 to $1,199 were classified as commercial only if the farm operator worked off the farm less than 100 days and the income of the farm operator and members of his family received from nonfarm sources was less than the total value of all farm products sold. Farms with a value of sales of all farm products of less than $250, as well as county, State, private institutional, and experimental farms, were classified as "Other."

Commercial farms have been divided into six groups on the basis of the total value of farm products sold, as follows:

Class of farm	*Value of farm products sold*
I	$25,000 or more.
II	10,000 to $24,999.
III	5,000 to 9,999.
IV	2,500 to 4,999.
V	1,200 to 2,499.
VI	*250 to 1,199.

*Provided the farm operator worked off the farm less than 100 days, and provided the income the farm operator and members of his family received from nonfarm sources was less than the value of all farm products sold.

Other farms have been grouped into three classes as follows:

Part-time farms.—Farms with a value of sales of farm products of $250 to $1,199 were classified as part time provided the farm operator reported (*a*) 100 or more days of work off the farm in 1949, or (*b*) the nonfarm income received by him and members of his family was greater than the value of farm products sold.

Residential farms.—Residential farms include all farms except abnormal farms with a total value of sales of farm products of less than $250. Some of these represent farms on which the operator worked off the farm more than 100 days in 1949. Some represent farms on which the income from nonfarm sources was greater than the value of sales of agricultural products. Others represent subsistence and marginal farms of various kinds. Some farms are included here which, under normal conditions, would have qualified as commercial farms.

Abnormal farms.—Insofar as it was possible to identify them, abnormal farms include public and private institutional farms, community enterprises, experiment station farms, grazing associations, etc.

Farms by type.—The classification of farms by type was made on the basis of the relationship of the value of sales from a particular source or sources to the total value of all farm products sold from the farm. In some cases, the type of farm was determined on the basis of the sale of an individual farm product, such as cotton, or on the basis of closely related products, such as dairy products. In other cases, the type was determined on the basis of sales of a broader group of products such as corn, sorghum, all small grains, field peas, field beans, cowpeas, and soybeans. Residential and abnormal farms were not classified by type. In order to be classified as a particular type, sales or anticipated sales of a product or a group of products had to represent 50 percent or more of the total value of products of the farm.

Only the farms in the sample were classified by type.

The types of farms for which data are shown, together with the product or group of products that had to represent 50 percent or more of the total sales in order for the farm to be so classified, are as follows:

Type of farm.	*Product or group of products amounting to 50 percent or more of the value of all farm products sold.*
Cotton	Cotton.
Cash-grain	Corn, sorghum, small grains, field peas, field beans, cowpeas, and soybeans.
Other field-crop	Peanuts, Irish potatoes, sweetpotatoes, tobacco, sugarcane, sugar beets for sugar, and other miscellaneous crops.
Vegetable	Vegetables.
Fruit-and-nut	Berries and other small fruits, and tree fruits and nuts.
Dairy	Milk and other dairy products. The criterion of 50 percent of the total sales was modified in the case of dairy farms. A farm for which the value of sales of dairy products represented less than 50 percent of the total value of farm products sold was classified as a dairy farm if: (*a*) Milk and other dairy products accounted for 30 percent or more of the total value of products, and (*b*) Milk cows represented 50 percent or more of all cows, and (*c*) Sales of dairy products, together with the sales of cattle and calves, amounted to 50 percent or more of the total sales.
Poultry	Chickens, eggs, turkeys, and other poultry products.
Livestock farms other than dairy and poultry.	Cattle, calves, hogs, sheep, goats, wool, mohair, goat milk, and products from animals slaughtered on the farm, provided the farm did not already classify as a dairy farm.
General	Farms were classified as general when the value of products from one source or group of sources did not represent as much as 50 percent of the total of the value of all farm products sold. Separate figures are given for three types of general farms: (*a*) Primarily crop. (*b*) Primarily livestock. (*c*) Crop and livestock. *Primarily crop* farms are those for which the sale of one of the following crops or groups of crops—vegetables, fruits and nuts, cotton, cash grains, or other field crops—did not amount to 50 percent or more of the value of all farm products sold, but for which the value of sales for all these groups of crops represented 70 percent or more of the value of all farm products sold. *Primarily livestock* farms are those which could not be classified as dairy farms, poultry farms, or livestock farms other than dairy and poultry, but on which the sale of livestock and poultry and livestock and poultry products amounted to 70 percent or more of the value of all farm products sold. *General crop and livestock* farms are those which could not be classified as either crop farms or livestock farms, but on which the sale of all crops amounted to at least 30 percent but less than 70 percent of the value of all farm products sold.
Miscellaneous	This group of farms includes those which had 50 percent or more of the total value of products accounted for by sale of horticultural products; or sale of horses; or sale of fur animals; or sale of forest products; or sale of bees, wax, and honey.

Farms by class of work power.—Farms have been grouped by class of work power on the basis of whether horses, mules, or tractors were reported. This classification does not present an entirely accurate picture of the work power used on all farms. For some farms, all the work power may be furnished by the landlord and for some farms all the work power may be hired. Thus, farms hiring all of the work power from others and those having it furnished may be shown as having no work power.

Large farms.—Large farms account for approximately one-fourth of the total production of farm products. Because of their importance, special efforts were made to insure the complete enumeration of all large farms. Prior to 1950, a list of all large farms was prepared from the records of the 1945 Census of Agriculture. Through a cooperative arrangement with the Bureau of Agricultural Economics, this list was checked and revised on the basis of available records in the various States by the State Statisticians as special agents of the Bureau of the Census. A list of these large farms was provided to District Supervisors and crew leaders and they were required to check to see that all such large farms were enumerated. A total of 62,781 large farms were on the lists sent to District Supervisors prior to the beginning of the enumeration. During the office processing, the list of large farms was checked against agriculture questionnaires enumerated and agriculture questionnaires or satisfactory explanations as to why an agriculture questionnaire was not required were obtained for all large farms that had not been enumerated.

The following criteria were used for determining whether a farm was to be classified as a large farm:

Criteria	*Western States* [1]	*Other States*
Land in farms	5,000 acres or more	1,000 acres or more.
Total cropland (cropland harvested + cropland pastured + cropland not harvested or pastured)	1,000 acres or more	750 acres or more.
Cattle of all ages	500 or more	200 or more.
Sheep of all ages	4,000 or more	500 or more.
Value of farm products sold or to be sold	$70,000 or more	$70,000 or more

[1] Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming.

In Alabama, Georgia, Mississippi, South Carolina, and Louisiana, and in specified counties in Kentucky, Maryland, Missouri, North Carolina, Tennessee, Virginia, Florida, Arkansas, and Texas, the criteria applied to the totals for the entire landlord-tenant operation, plantation, or other type of large farm holding. If the landlord-tenant operation qualified as a large farm, the home farm portion of the landlord-tenant operation was considered a large farm even though the home farm operating unit did not itself meet the criteria for a large farm.

The enumeration of large farms was checked in most cases by crew leaders, in accordance with the enumerator's instructions, as the additional information that was required to be obtained for only a sample of farms was also required to be obtained for all large farms that were not in the sample. All questionnaires for large farms were reviewed by members of the technical staff during the office processing. Information regarding the importance of large farms and their use in connection with the sample for the 1950 Census of Agriculture is given in table 4.

Effect of change in the definition of a farm on data for the 1950 Census.—The procedure of determining whether a place was to be counted as a farm and the definition of a farm were different for the 1950 Census from those for prior censuses. Prior to 1950, census enumerators were given a definition of a farm and were instructed to enumerate all places which would qualify as farms. Generally, for censuses prior to 1950, census enumerators were instructed to enumerate as farms any place of less than 3 acres on which the value of products produced in the year preceding the census amounted to $250 or more and also any places of 3 or more acres on which there were farm products produced during the year preceding the census. Census enumerators experienced considerable difficulty in applying this definition of a farm. For places less than 3 acres, it was necessary for the census enumerator to determine the value of farm products produced. Most of the farm products produced on such places were not sold but were consumed by the family of the operator. The securing of reports for such products involved difficulties not only in regard to the determination of the amount produced but also in regard to the price to be used in determining value. The price that would be received if such products were sold, would differ from the prices that would be paid if the products were purchased. For places of over 3 acres, it was necessary for the enumerator to determine if there had been any agricultural products produced during the preceding year before he filled an agriculture questionnaire. Quite often, census enumerators used the test of whether the place was locally considered a farm to determine if there was agricultural production on the place. There are a considerable number of places, not locally considered as farms, on which there is sufficient production of farm products to qualify such places as Census farms. The use of the test of whether such a place is locally considered a farm, did not always provide a satisfactory basis for determining that a place was to be enumerated and counted as a farm.

Because of the difficulties experienced by census enumerators in prior censuses in determining which places to enumerate as farms, it was decided to enumerate, for the 1950 Census of Agriculture, all places that might qualify as farms and then to use, during the office processing, uniform criteria for determining which places represented farms. Accordingly, census enumerators were instructed to enumerate all places locally called farms and also all places of 3 or more acres whether or not it was considered a farm and for certain specialized operations.

The procedure used for the 1950 Census resulted in the obtaining of reports for more than one million places that were not counted as farms. (See table 8.) These places contained over 48,000,000 acres of land and their area was equivalent to 4.2 percent of all land included in farms and 2.5 percent of the total land area in the United States. There were no agricultural operations on 785,000 of these places. The agricultural production on the 247,000 places with agricultural operations was not sufficient for these places to be counted as farms.

If the same criteria for determining if a place enumerated was a farm had been used during the office processing for the 1950 Census as for prior censuses, most of the 247,000 places would have been counted as farms. Most of these places represent country residences on which there is very little agricultural production.

It appears that the enumeration of places that might qualify as Census farms for the 1950 Census of Agriculture resulted in a more complete enumeration of farms. On the other hand, the use of a more restrictive definition of a farm, in 1950, resulted in the elimination of 247,000 places, most of which would have been counted as farms if the same criteria had been used in 1950 as during prior censuses.

The decrease in the number of farms from 5,859,169 in 1945 to 5,382,162 in 1950 resulted partly from a change in the definition of a farm. It is estimated that 150,000 to 170,000 of the decrease of 477,007 was the result of the change in the farm definition. Data in table 9 give the number of places with agricultural operations excluded from the count of farms in 1950 for three groups of counties. Of the 247,038 places with agricultural operations that were excluded from the count of farms,

42,458, or 17.2 percent, were in counties in which the number of farms increased from 1945 to 1950; 56,926, or 23.0 percent, were in counties in which the number of places excluded from the census equaled or exceeded the decrease in the number of farms; and 147,654, or 59.8 percent, were in counties in which the number of places excluded was less than the decrease in the number of farms.

The decrease in the number of farms because of the change in the farm definition affected primarily the number of farms, and the number of farms reporting farm equipment and farm facilities. The effect of the change in the farm definition on land in farms, cropland harvested, the number of livestock, the production of livestock products, and the acreage and production of crops, was very small, as most of the places excluded from the 1950 Census were country residences and part-time farms with small acreages, few livestock, and very small production of farm products.

Completeness of coverage of the census.—Estimates of the completeness of the coverage of the 1950 Census of Agriculture are available from two sources; (1) a re-enumeration made for a sample of approximately 6,000 farms, and (2) independently derived statistics such as those for cotton ginnings and sugarcane processing.

The re-enumeration of farms was made for a carefully designed sample comprising approximately 1,000 segments scattered among 220 counties or groups of counties. The objectives of this re-enumeration were (1) to identify and measure the errors in the Census counting of farms, and (2) to measure the reporting errors for farms enumerated in the census. A report will be issued later further analyzing the errors in the Census count of farms and the reporting errors for farms included in the census.

On the basis of the re-enumeration, it is estimated that there was a net under-enumeration of 274,000 farms for the 1950 Census of Agriculture. This under-enumeration is the net difference between the estimate of farms not included in the census tabulations and of farms erroneously enumerated. Farms were counted as not being included in the census tabulations if (1) no record of them could be found in the Census of Agriculture, (2) they were not enumerated in the correct county, (3) they were not enumerated in the name of the farm operator or a member of his family, or (4) they were excluded from the census tabulations because they appeared not to represent census farms (i. e., did not meet the criteria for a farm). In general, farms were counted as being erroneously enumerated if (1) they were included more than once in the census tabulation, (2) the information obtained during the re-enumeration indicated that they did not meet the Census criteria for a farm, or (3) they were not enumerated in the name of the farm operator or a member of his family.

Figures for the net under-enumeration for farms and for selected items are shown in table 10. For the United States, the net under-enumeration was equivalent to 5.1 percent of the farms, 2.0 percent of all land in farms, and 2.1 percent of cropland harvested shown by the 1950 Census.

The data given in tables 10 and 11 indicate that a large part of the net error was for small farms with very limited production of farm products. The net under-enumeration of land in farms and cropland harvested was less than one-half the net under-enumeration for the number of farms. The figures in

Table 8.—NUMBER AND AREA OF PLACES ENUMERATED AND NOT COUNTED AS FARMS, BY DIVISIONS AND STATES: CENSUS OF 1950

Division or State	Number of places not counted as farms			Area of places not counted as farms[1]

table 11 indicate that one-fourth of the net under-enumeration was for farms of less than 10 acres; over a third for farms of 10 to 49 acres; a sixth for farms 100 to 220 acres; and less than one-twentieth for farms of 220 acres and over.

Less than one-fifth of the net under-enumeration was for commercial farms. More than one-third of the farms counted as not included in the census were enumerated for the census but were not included in the census tabulations because the information obtained by the census enumerator indicated that the agricultural operations were not sufficient to meet the Census criteria for a farm.

The re-enumeration was subject to errors of enumeration and office processing. However, the enumerators for the re-enumeration were carefully selected and given much more intensive training and supervision than the census enumerators. During the office processing, information for each farm identified during the re-enumeration was carefully compared with the information for the same farm enumerated in the census.

The re-enumeration was made for a probability sample and estimates of sampling reliability can be made. These estimates of sampling reliability for the net enumeration are given in tables 10 and 11. These estimates are to be interpreted as follows:

The chances are about 2 out of 3 that the estimates of net under-enumeration given in table 10 would differ from those obtained by a complete re-enumeration of all farms by amounts less than the absolute sampling errors indicated in the table. The chances are about 19 out of 20 that the estimates are within twice the absolute sampling errors of the figures which would result from a re-enumeration of all farms.

Data compiled independently of the census provide partial measures of the completeness of the coverage of the census. Data regarding cotton ginnings and sugar beet and sugarcane processing have been obtained independently from processors of these farm products. The entire production of cotton, sugar beets for sugar, and sugarcane for sugar are processed, hence the data on the total amount of these products processed provide accurate measures of the total production. Data obtained from operators of cotton gins showed the 1949 production of cotton to be 15,908,591 running bales. This was 489,143 running bales or 3.2 percent greater than the amount reported for the census. The reports obtained from operators of sugar beet factories by the Bureau of Agricultural Economics of the United States Department of Agriculture showed that the total production of sugar beets in 1949 was 10,148,000 tons. This compares with 9,944,016 tons reported for the census. The production of sugarcane for sugar in the United States, according to reports obtained from sugar mills by the United States Department of Agriculture was 6,110,000 tons. The production of sugarcane for sugar according to the census was 6,301,196 tons, or 3.1 percent more than reported by operators of sugar mills.

A comparison of data obtained in the 1950 Censuses of Agriculture and Irrigation also provides a partial measure of the completeness of coverage of the census in 20 States. Reports for the 1950 Census of Irrigation were obtained from enterprises supplying irrigation water to farms in the 17 Western States and Arkansas, Florida, and Louisiana. According to the 1950 Census of Irrigation, the total area irrigated in the 17 Western States and Arkansas, Florida, and Louisiana in 1949 was 26,233,215 acres. The area of land irrigated in these 20 States according to the 1950 Census of Agriculture was 25,634,869 acres, or 2.3 percent less than shown by the 1950 Census of Irrigation.

Data are not now available to indicate the accuracy of census totals for many characteristics. Totals for many characteristics are affected not only by the incompleteness of coverage, but also by various kinds of reporting errors. Adequate check data from independent sources are not available to provide a measure of the effect of these reporting errors upon census totals.

Availability of data for geographic areas.—Four different geographic areas—minor civil divisions, counties, State economic areas, and States—were used as geographic units for the tabulation of data for the 1950 Census of Agriculture.

Minor civil divisions are primary subdivisions of counties and include townships, towns, precincts, election districts, magisterial districts, school districts, civil districts, beats, etc. Counties are the smallest areas for which data for the 1950 Census of Agriculture are published. There were 3,101 counties, including independent cities, in the United States at the date of the census.

State economic areas represent groupings of counties within a State. A map showing the State economic areas in each State appears in Volume I of the reports of the 1950 Census of Agriculture. The counties comprising a State economic area have similar agricultural, demographic, climatic, physiographic, and cultural characteristics. Basically, State economic areas have been established for the purpose of presenting statistics not only for the 1950 Census of Agriculture but also for the Censuses of Population and Housing. In order to establish areas for all 3 of these censuses, the 48 States have been subdivided into 501 State economic areas. (A description of State economic areas and a map showing the State economic areas for all States appears in the Special Report of the 1950 Census entitled, "State Economic Areas: A Description of the Procedure Used in Making a Functional Grouping of the Counties in the United States.") For the purpose of presenting agricultural statistics, most metropolitan areas have been combined with adjacent economic areas when the number of farms and agricultural production of the metropolitan area are of small importance. On the other hand, in a few cases, because of significant differences in the characteristics of the agriculture within the State economic areas, some State economic areas have been subdivided in order to present statistics for the 1950 Census of Agriculture. Outside the metropolitan areas, the State economic areas in general are the same as State type-of-farming areas. For the United States, detailed statistics are shown for 362 State economic areas.

Generally, totals and the number of farms reporting for all items on the agriculture questionnaire, except items covered by questions 230 to 238 and questions 306 through 332, were tabulated by minor civil divisions. Data for questions 306 through 332 were enumerated for a sample of approximately 20 percent of the farms. A sample of this size would not provide figures of sufficient reliability for most uses by minor civil divisions. None of the data tabulated by minor civil divisions have been published by the Bureau of the Census. Statistical tables containing data by minor civil divisions can be obtained by paying the cost of preparing the statistical tables and checking the data.

Totals and the number of farms reporting are available, and published in most cases, by counties for all items, except farm taxes, farm mortgage indebtedness, and cash rent, included in the 1950 Census of Agriculture. These data are given in Volume I of the reports for the 1950 Census of Agriculture. In some cases, the figures, particularly for crops of minor importance, are not published by counties. However, totals for such items are published in the various State tables in Volume I. Data for farm taxes and cash rent are available only for States and are given in State Tables 17 and 18 of Volume I. Data on farm mortgage indebtedness are available only by States and appear in part 8 of Volume V.

The data published by State economic areas consist primarily of those relating to some special counts or tabulations for farms or farm operators and to cross tabulations. The special counts and tabulations include farm operators classified by age and by year they began operation of their present farm; farms reporting woodland pastured and woodland not pastured classified by acreage; farm workers classified by basis of payment and perquisites furnished; farms reporting farm workers classified by number of workers; farms reporting horses and/or mules,

sows and gilts for spring farrowing, and farm slaughter, by number of animals; farms reporting and number of chickens 4 months old and over, farms reporting and number of chickens sold, and farms reporting and dozens of eggs sold, by size of flock; farms reporting and number of cows milked yesterday, farms reporting and value of dairy products sold, farms reporting, amount, and value of whole milk sold, farms reporting pounds of butterfat, and value of cream sold, by size of herd; farms reporting the principal crops classified by acreage harvested; farms reporting grain crops sold and hay sold classified by quantity sold; farms reporting, acres, and bushels harvested for Irish potatoes by acreage harvested; farms reporting apples and peaches classified by number of trees not of bearing age, trees of bearing age, and quantity harvested.

Nearly all of the data regarding the number and characteristics of farms classified by size of farm, color and tenure of farm operator, type of farm and economic class of farm were tabulated and published by State economic areas. The data available, and in nearly all cases, published, for the four classifications of farms by State economic areas, are indicated by table 12. The data tabulated for these classifications of farms represent estimates based upon a sample of farms. Data are published by counties in Volume I for the number of farms, and for all land in farms for farms classified by size of farm and by tenure of operator (color and tenure of operator in the Southern States). Figures for the number of farms by color of operator, the number of farms by type of farm, and by economic class of farm, and for farms reporting and acreage of cropland harvested by tenure of operator appear in Volume I. Unpublished data are available for counties for the number of farms reporting and the acreage of land in farms classified by size of farm and by tenure of operator (color and tenure of operator for the Southern States).

Totals for all data tabulated for the 1950 Census of Agriculture are available and are published in nearly all cases for the 48 States and the District of Columbia. These totals are usually given in Volume I of the reports of the 1950 Census of Agriculture. These totals also appear in most cases in the analytical tables presented in this volume.

TABLE 10.—ESTIMATES OF THE NET UNDER-ENUMERATION FOR FARMS AND SELECTED ITEMS FOR REGIONS AND THE UNITED STATES: 1950 CENSUS OF AGRICULTURE

Region and item	Census total	Estimated net under-enumeration			
		Number (thousands)	Percent of census total	Absolute sampling error of estimate	
				Amount (thousands)	Percent
United States					
Farms—number	5,382,162	274	5.1	36	0.7
Land in farms—acres	1,159,789,020	22,903	2.0	6,353	0.5
Cropland harvested—acres	345,528,410	7,376	2.1	2,051	0.6
Corn harvested—acres	83,351,015	1,073	1.3	141	0.2

TABLE 11.—ESTIMATED NET UNDER-ENUMERATION OF FARMS IN THE 1950 CENSUS OF AGRICULTURE, BY SIZE OF FARM, FOR THE UNITED STATES

Size of farm	Census total	Estimated net under-enumeration of farms				
		Number (thousands)	Percent of census total	Percent of net under-enumeration	Absolute sampling error of estimate	
					Number (thousands)	Percent
Total	5,382,162	274	5.1	100.0	36	0.7
Under 10 acres	484,914	80	16.5	29.2	22	4.6
10–49 acres	1,477,850	101	6.8	36.9	19	1.3
50–99 acres	1,047,801	42	4.0	15.3	17	1.6
100–219 acres	1,377,571	42	3.0	15.3	15	1.1
200 acres and over	994,026	9	0.9	3.3	4	0.4

Table 12.—LIST OF ITEMS FOR WHICH DATA ARE PUBLISHED BY SIZE OF FARM, COLOR AND TENURE OF OPERATOR, TYPE OF FARM, AND ECONOMIC CLASS OF FARM, FOR THE 1950 CENSUS OF AGRICULTURE

Item	
FARMS, ACREAGE, AND VALUE	
Farms	number
Land owned by farm operators	farms reporting
	acres
Land rented from others by farm operators	farms reporting
	acres
Land managed by farm operators	farms reporting
	acres
Land rented to others by farm operators	farms reporting
	acres
Land in farms	acres
Average size of farm	acres
Value of land and buildings	average per farm, dollars
	average per acre, dollars
Proportion of farms reporting value	percent
Proportion of land in farms for which value was reported	percent
Land in farms according to use:	
Cropland harvested	farms reporting
	acres
1 to 9 acres	farms reporting
10 to 19 acres	farms reporting
20 to 29 acres	farms reporting
30 to 49 acres	farms reporting
50 to 99 acres	farms reporting
100 to 199 acres	farms reporting
200 acres and over	farms reporting
Cropland used only for pasture	farms reporting
	acres
Cropland not harvested and not pastured	farms reporting
	acres
Woodland pastured	farms reporting
	acres
Woodland not pastured	farms reporting
	acres
Other pasture (not cropland and not woodland)	farms reporting
	acres
Other land (house lots, roads, wasteland, etc.)	farms reporting
	acres
Cropland, total	farms reporting
	acres
Land pastured, total	farms reporting
	acres
Woodland, total	farms reporting
	acres
Irrigated land in farms	farms reporting
	acres
Land irrigated by sprinklers	farms reporting
	acres
FARM OPERATORS	
Residing on farm operated	operators reporting
Not residing on farm operated	operators reporting
With other income of family exceeding value of agricultural products sold	operators reporting
Off-farm work:	
Working off their farm, total	operators reporting
1 to 99 days	operators reporting
100 days or more	operators reporting
Not working off their farm	operators reporting
Operators by age:	
Under 25 years	operators reporting
25 to 34 years	operators reporting
35 to 44 years	operators reporting
45 to 54 years	operators reporting
55 to 64 years	operators reporting
65 years and over	operators reporting
Average age	years
Operators by years on present farm:	
Less than 5 years	operators reporting
1 year or less	operators reporting
5 to 9 years	operators reporting
10 years or more	operators reporting
Average number of years on present farm	years
SPECIFIED FACILITIES	
Telephone	farms reporting
Electricity	farms reporting
From a power line	farms reporting
Average of last monthly electric bill	dollars
From a home plant	farms reporting
Electric water pump	farms reporting
Electric hot-water heater	farms reporting
Home freezer	farms reporting
Electric washing machine	farms reporting
Electric chick brooder	farms reporting
Electric power-feed grinder	farms reporting

Item—Continued	
SPECIFIED EQUIPMENT ON FARMS	
Milking machine	farms reporting
Grain combines	farms reporting
	number
Corn pickers	farms reporting
	number
Pick-up hay balers	farms reporting
	number
Silos	farms reporting
Motortrucks	farms reporting
	number
Year of newest model	farms reporting
Under 5 years	farms reporting
5 to 9 years	farms reporting
10 years and over	farms reporting
Tractors	farms reporting
	number
Wheel and/or crawler tractors other than garden	farms reporting
Wheel tractors other than garden	farms reporting
	number
Year of newest model	farms reporting
Under 5 years	farms reporting
5 to 9 years	farms reporting
10 years and over	farms reporting
Garden tractors	farms reporting
	number
Crawler tractors	farms reporting
	number
Automobiles	farms reporting
	number
Year of newest model	farms reporting
Under 5 years	farms reporting
5 to 9 years	farms reporting
10 years and over	farms reporting
Farms by class of work power:	
No tractor, horses, or mules	farms reporting
No tractor and only 1 horse or mule	farms reporting
No tractor and 2 or more horses and/or mules	farms reporting
Tractor and horses and/or mules	farms reporting
Tractor and no horses or mules	farms reporting
FARMS BY KIND OF ROAD ON WHICH LOCATED	
Hard surface	farms reporting
Gravel, shell, or shale	farms reporting
Dirt or unimproved	farms reporting
FARM LABOR WEEK PRECEDING ENUMERATION	
Family and/or hired workers	farms reporting
	persons
Family workers, including operator	farms reporting
	persons
Operators working 1 or more hours	persons
Unpaid members of operator's family working 15 hours or more	farms reporting
	persons
Hired workers	farms reporting
	persons
Regular workers (to be employed 150 days or more)	farms reporting
	persons
Seasonal workers (to be employed less than 150 days)	farms reporting
	persons
Regular hired workers and no seasonal hired workers	farms reporting
No report as to period of expected employment	farms reporting
	persons
Farms by kind of workers:	
Both family workers and hired workers	farms reporting
Family workers only	farms reporting
Operators only	farms reporting
Unpaid members of operator's family only	farms reporting
Hired workers only	farms reporting
SPECIFIED FARM EXPENDITURES IN 1949	
Specified farm expenditures	farms reporting
Machine hire and/or hired labor	farms reporting
	dollars
Machine hire	farms reporting
	dollars
Hired labor	farms reporting
	dollars
Feed for livestock and poultry	farms reporting
	dollars
Livestock and poultry purchased	farms reporting
	dollars
Seeds, bulbs, plants, and trees purchased	farms reporting
	dollars
Gasoline and other petroleum fuel and oil	farms reporting
	dollars
Farm machinery repairs	farms reporting
	dollars
Tractor repairs	farms reporting
	dollars
Other farm machinery repairs	farms reporting
	dollars

Table 12.—LIST OF ITEMS FOR WHICH DATA ARE PUBLISHED BY SIZE OF FARM, COLOR AND TENURE OF OPERATOR, TYPE OF FARM, AND ECONOMIC CLASS OF FARM, FOR THE 1950 CENSUS OF AGRICULTURE—Continued

Item—Continued	
Farms by size of farm:	
Under 10 acres	number
10 to 29 acres	number
30 to 49 acres	number
50 to 69 acres	number
70 to 99 acres	number
100 to 139 acres	number
140 to 179 acres	number
180 to 219 acres	number
220 to 259 acres	number
260 to 499 acres	number
500 to 999 acres	number
1,000 acres and over	number
Farms by tenure of operator:[1]	
Full owners	number
Part owners	number
Managers	number
All tenants	number
Cash tenants	number
Share-cash tenants	number
Share tenants	number
Crop-share tenants	number
Livestock-share tenants	number
Croppers	number
Other and unspecified tenants	number
Farms not classified by tenure	number
Farms by type:[1]	
Field-crop farms other than vegetable and fruit-and-nut	number
Cash-grain	number
Cotton	number
Other field-crop	number
Vegetable farms	number
Fruit-and-nut farms	number
Dairy farms	number
Poultry farms	number
Livestock farms other than dairy and poultry	number
General farms	number
Primarily crop	number
Primarily livestock	number
Crop and livestock	number
Miscellaneous and unclassified farms	number
Farms by economic class:[1]	
Commercial farms	number
Class I	number
Class II	number
Class III	number
Class IV	number
Class V	number
Class VI	number
Other farms	number

Item—Continued	
Value of farm products sold in 1949 by source:	
All farm products sold	dollars
All crops sold	dollars
Field crops, other than vegetables and fruits and nuts, sold	dollars
Vegetables sold	dollars
Fruits and nuts sold	dollars
Horticultural specialties sold	dollars
All livestock and livestock products sold	dollars
Dairy products sold	dollars
Poultry and poultry products sold	dollars
Livestock and livestock products, other than dairy and poultry, sold	dollars
Forest products sold	dollars
Number of farms reporting sales of any farm products	number
Average sales per farm reporting	dollars
Livestock on April 1, 1950:	
Horses and mules	farms reporting; number
All cattle and calves	farms reporting; number
Cows, including heifers that have calved	farms reporting; number
Milk cows	farms reporting; number
All hogs and pigs	farms reporting; number
Chickens 4 months old and over	farms reporting; number
Livestock and livestock products sold in 1949:	
Cattle and calves sold alive	farms reporting; number
Hogs and pigs sold alive	farms reporting; number
Chickens sold	farms reporting; number
Chicken eggs sold	farms reporting; dozens
Specified crops harvested in 1949:[1]	
Corn for all purposes	farms reporting; acres
Corn harvested for grain	farms reporting; acres; bushels harvested; bushels sold
Land from which hay was cut	farms reporting; acres

[1] Data for following items were published or tabulated for selected States. Wheat, oats, rye, barley, flaxseed, rice, soybeans for beans, cowpeas harvested for dry peas, peanuts picked or threshed, dry field and seed beans, Irish potatoes, sweetpotatoes, tobacco, sugarcane, broomcorn, popcorn, sugar beets, and hops; land in bearing and nonbearing fruit orchards, groves, vineyards, and planted nut trees; apples and peaches; and cultivated summer fallow.

23.—Land in farms; land not in farms classified according to use; and land used for agriculture and forestry; by divisions and States: 1950 and 1945 64
24.—Farm population, by divisions and States: Censuses of 1950, 1945, and 1940 66

CHAPTER I.—FARMS AND LAND IN FARMS

Introduction.—This chapter presents statistics on the number of farms, land in farms, value of farm land and buildings, and farm population. It provides information on the agricultural use made of our land resources and the adjustments made in these uses through the years. Within recent years, shifts in population and employment, increased employment in nonagricultural pursuits, increased production through improved agricultural practices, mechanization of farms, etc., have materially affected the number of farms and the utilization of land in farms.

Sources of data.—The data presented are from the 1950 Census of Agriculture with comparative data from earlier censuses. This information is supplemented with data on population from the decennial censuses of population, and on the uses of nonfarm lands from estimates of the Bureau of Agricultural Economics, United States Department of Agriculture. The Appendix includes a facsimile of the questionnaire used for taking the 1950 Census of Agriculture.

For the most part, the data from the 1950 Census of Agriculture represent a summation of the replies received to inquiries on questionnaires filled for each farm in the United States; however, the data on the value of farm land and buildings, and the classification of farms reporting by number of acres of woodland pastured and by acres of woodland not pastured, represent estimates based on the reports for only a sample of farms enumerated.

When all data in a table are based on the reports for only a sample of farms, the table carries a headnote to that effect. When only a part of the data in a given table is based on a sample, the sample data are shown in italics. Since estimates based on a sample are subject to sampling errors, the sample totals are not in exact agreement with those obtained by tabulating data for all farms.

For a description of the procedures used in the enumeration and processing of the statistics and of the sampling technique, and for tables giving the reliability of estimates based on the sample, see the Introduction to this volume.

Presentation of statistics.—The statistics are presented as totals for the continental United States, for major geographic areas, and for each of the 48 States and the District of Columbia. The major geographic areas include 9 groups of States, called geographic divisions, and a further grouping showing totals for 3 regions—the North, the South, and the West. An outline map showing the States and the geographic divisions and regions for which totals are shown appears in the Introduction to this volume.

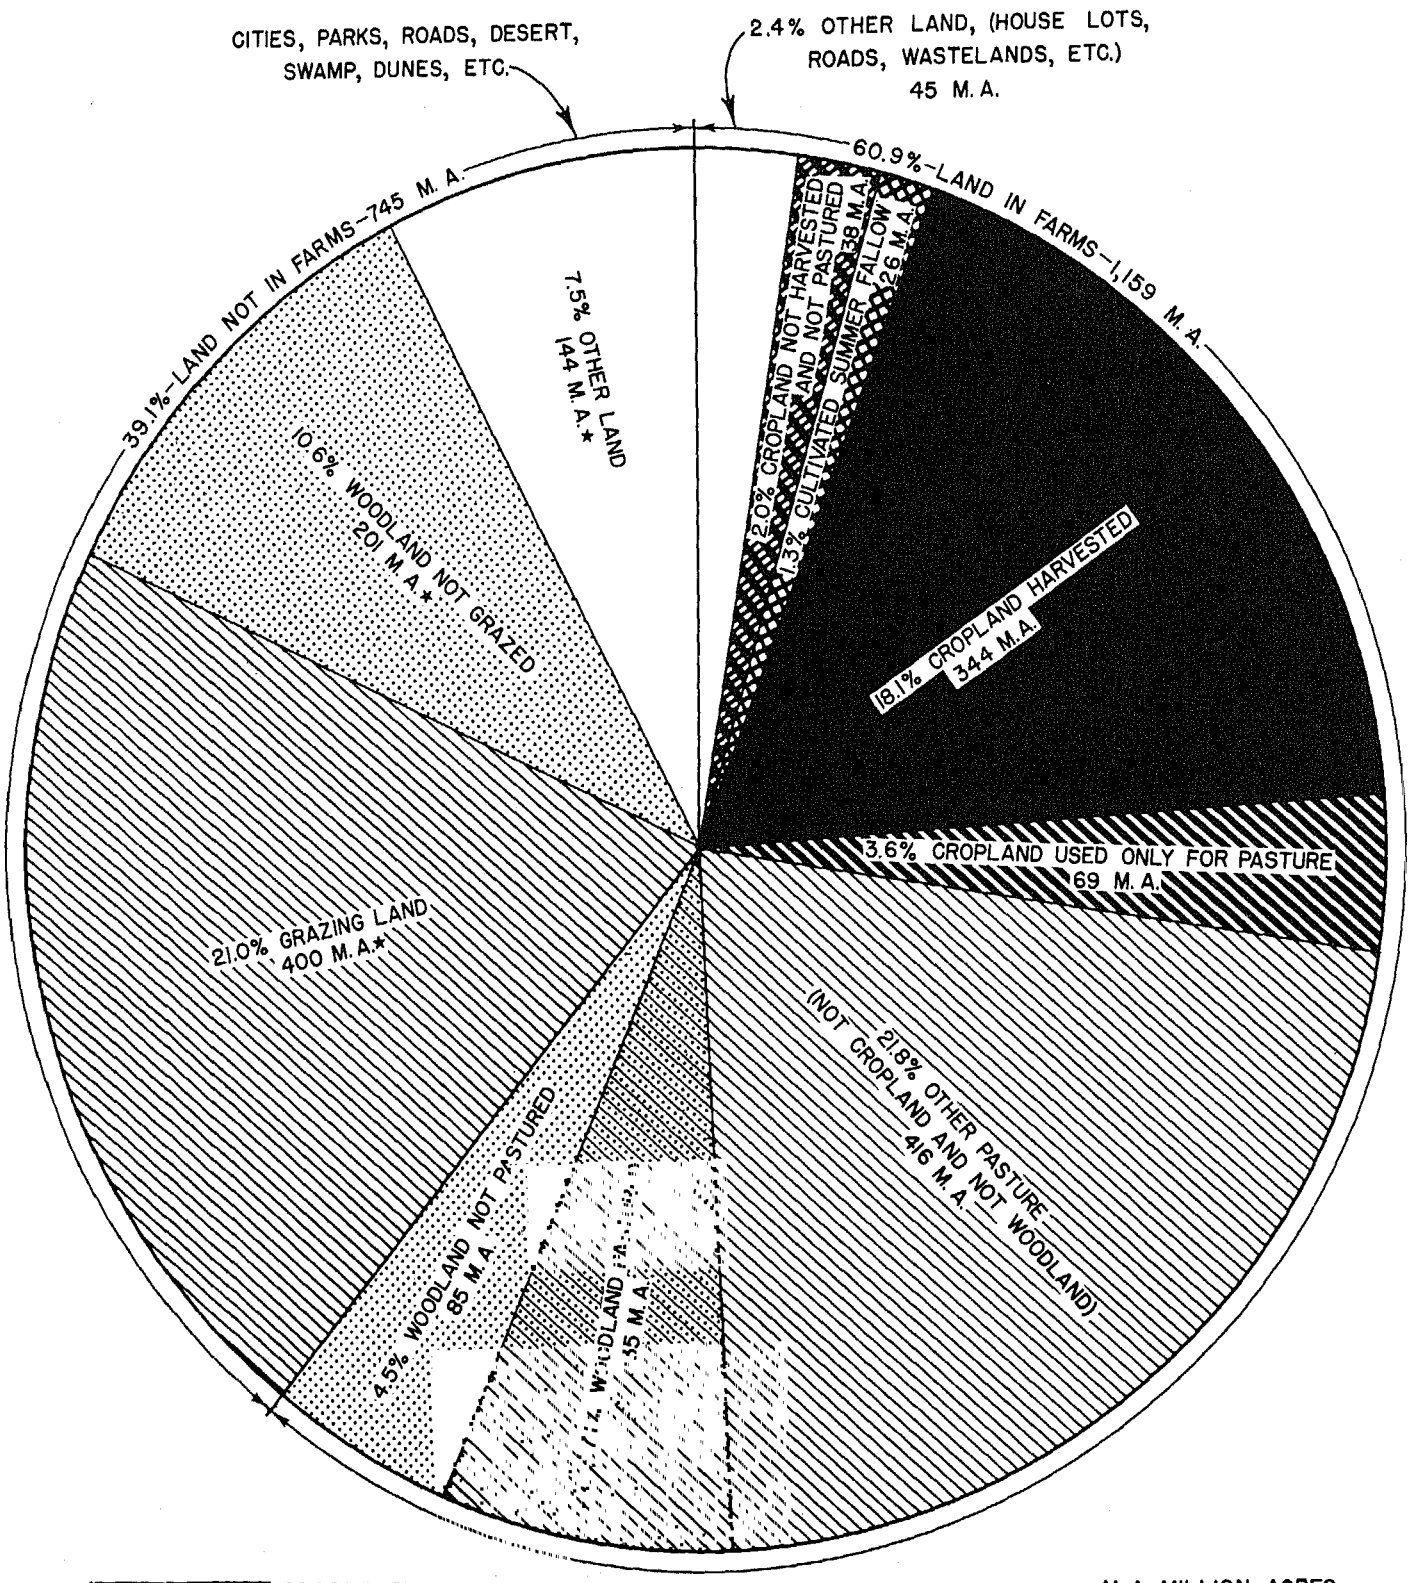
Averages, percentages, and other derived data are provided as aids in using and analyzing the statistics. Comparable data from earlier censuses provide a measure of the changes that have occurred from census to census. Most of the available comparative data for prior censuses are shown in tables for the United States. Historical data for regions, divisions, and States are shown only for selected census years or selected items. In presenting statistics for earlier census years, headnotes, footnotes, or the wording of the stub or column headings indicates any significant lack of comparability which may have resulted from changes in the wording of the inquiries, in the instructions or definitions, or in the procedures followed in collecting and compiling the data. The text gives further information in regard to the comparability of the data for various items. The tabular presentation is supplemented by graphic presentation through the use of maps and charts.

Other published data.—Data for the territories and possessions are not included in this chapter but may be found in Part 34, "Territories and Possessions," of Volume I, "Counties and State Economic Areas," of the 1950 Census of Agriculture reports.

Data by counties on number of farms, land in farms, land use, and value of land and buildings may be found in Volume I, parts 1 to 33.

Data on farm population by counties may be found in Series P–B, or in Chapter B of Volume II, "Characteristics of the Population," of the 1950 Population reports. The rural-farm population is shown in Table 49 and the urban-farm population in Table 42 in both of these reports. Data for State economic areas (groups of counties within the State having similar agricultural, demographic, climatic, physiographic, and cultural characteristics) on number of farms, land in farms, land use, and value of land and buildings may be found in Volume I of the 1950 Census of Agriculture reports.

Data on number of farms, land in farms, land use, and value of land and buildings, classified by size of farm, appear in Chapter X of this volume; by color, race, and tenure of operator in Chapter XI; by economic class of farm in Chapter XII; and by type of farm in Chapter XIII. Some of the data by these classifications are also presented by counties and by State economic areas in Volume I. (See the Introduction to this volume for availability of data for various classifications and at various geographic levels.)



The number of farm operators classified by age, residence, years on farm and off-farm work is presented in Chapter II of this volume.

Additional data on irrigated land and irrigated farms appear in Volume III, "Irrigation of Agricultural Lands," of the 1950 Census of Agriculture reports. County data for irrigated farms covering number of farms, lands in farms, land use, value of land and buildings and the irrigated land in these farms by use, are shown for 17 Western States and Arkansas, Florida, and Louisiana in Volume I.

A more detailed description of the plan of presentation of the data collected in the 1950 Census of Agriculture is given in the Introduction to this volume. For the items covered in the agriculture census see the facsimile of the questionnaire shown in the Appendix.

History of census inquiries on farms and farm property.—Data on number of farms, land in farms, and value of farm land and buildings were obtained for the first time in 1850, the first complete census of agriculture. However, in 1840, information was obtained on specified agricultural products and on numbers of various classes of animals. Figures for all land in farms classified as "improved" and "unimproved" were obtained in all censuses from 1850 to 1920. Unimproved land was subclassified to show woodland in farms in the 1870, 1880, 1910, and 1920 censuses. A more detailed classification of all farm land by use was obtained in the 1925 Census, which classification, with modifications, has been continued.

MAJOR USES OF LAND IN THE UNITED STATES
1950

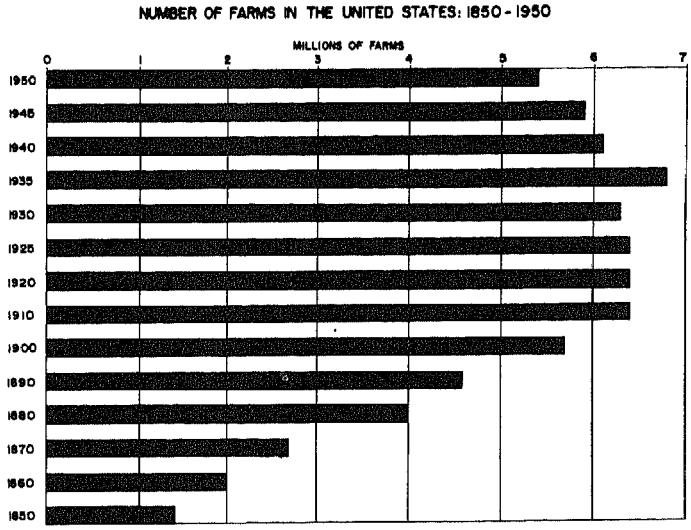
★ ESTIMATES BY BUREAU OF AGRICULTURAL ECONOMICS, U. S. DEPARTMENT OF AGRICULTURE
PERCENTAGES SHOWN IN LARGE CIRCLE ARE OF TOTAL LAND AREA OF THE NATION

DEFINITIONS AND EXPLANATIONS

The descriptive terms and explanations refer principally to the 1950 Census of Agriculture, although, in general, they are applicable to earlier censuses. The definitions consist primarily of a résumé of the questionnaire wording, occasionally supplemented by the more essential parts of instructions and procedures for enumerating and processing the questionnaires. For the exact phrasing of the inquiries, reference should be made to the facsimile of the 1950 Agriculture Questionnaire shown in the Appendix.

Definitions having a general application, such as those for "farms reporting," and "operators reporting," and factors influencing the data for numerous items are discussed in the Introduction to this volume and are not discussed in this chapter, unless of particular significance in respect to the subject under consideration.

A farm.—For the 1950 Census of Agriculture, neither the enumerator nor the respondent who filled his own questionannaire was given the definition of a farm. The instructions given the enumerator, as well as the respondent, were explicit as to when to fill a questionnaire. The determination as to which questionnaires represented farms was made in the Washington office. Places of 3 or more acres were counted as farms if the value of agricultural products in 1949, exclusive of home gardens, amounted to $150 or more. The agricultural products could have been either for home use or for sale. Places of less than 3 acres were counted as farms only if the value of sales of agricultural products in 1949 amounted to $150 or more. Places operated in 1949 for which the value of agricultural products in 1949 was less than these minima, because of crop failure or other unusual situation, and places operated in 1950 for the first time were counted as farms if normally they could be expected to produce these minimum quantities of farm products.



All the land under the control of one person or partnership was included as one farm. Control may have been through ownership, or through lease, rental, or cropping arrangement.

If a person had croppers or other tenants, the land assigned each cropper or other tenant was considered a separate farm, even though the landlord handled the entire holding as one operating unit in respect to supervision, equipment, rotation practices, purchase of supplies, or sale of products. Land retained by the landlord and worked by him with the help of family and/or hired labor was likewise considered a farm. Occasionally, the land retained by the landlord consisted of pastureland not assigned for the exclusive use of a cropper or other tenant, and woodland, or wasteland. Such land, if 3 or more acres in size, was considered a farm, even though the agricultural operations on this retained land may have been insufficient to qualify as a farm.

If a person, who was paid a salary for operating farm lands for others, managed land for two or more employers, all the land managed by him was considered one farm.

In the enumeration of Indian reservations, the enumerator was instructed to obtain a questionnaire for each tract of land of 3 or more acres held by an individual Indian. He was also instructed to obtain a questionnaire for the land held jointly, or used cooperatively. Such cooperative groups included grazing associations, grazing districts, tribal farms, Indian schools, experimental or demonstration farms, and other administrative units. Farms representing such cooperative groups or administrative units accounted for a large part of the Indian agriculture reported in the 1950 Census.

For the 1945 and earlier censuses of agriculture, the definition of a farm was somewhat more inclusive. Census enumerators were provided with the definition of a farm and were instructed to fill reports only for those places which met the criteria. From 1925 to 1945, farms, for Census purposes, included places of 3 or more acres on which there were agricultural operations, and places of less than 3 acres with agricultural products for home use or for sale valued at $250 or more. For places of 3 or more acres, no minimum quantity of agricultural production was required for purposes of enumeration; for places of under 3 acres all the agricultural products valued at $250 or more may have been for home use and not for sale. The only reports excluded from the tabulations were those taken in error, and a few

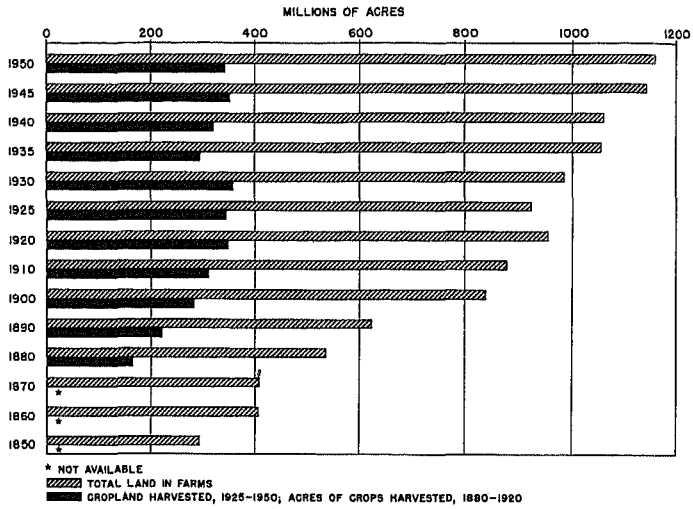
with very limited agricultural production, such as only a small home garden, a few fruit trees, a very small flock of chickens, or the like. In 1945, reports for 3 acres or more were retained if there were 3 or more acres of cropland and pasture, or if the value of products in 1944 amounted to $150 or more when there was less than 3 acres of cropland and pasture.

The definition of a farm in the 1920 and 1910 Censuses was similar to that used from 1925 to 1940 but was somewhat more inclusive. In those years farms of less than 3 acres with products valued at less than $250 were to be included provided they required the continuous services of at least one person.

In the definition for 1900, there was no acreage limit. Market, truck, and fruit gardens, orchards, nurseries, cranberry marshes, greenhouses, and city dairies were to be included provided the entire time of at least one person was devoted to their care. For 1890, 1880, and 1870, no tract of less than 3 acres was to be reported as a farm unless $500 worth of produce was actually sold from it during the year. For 1860, no definition was given the enumerators. In the Census of 1850, no acreage qualification was given in the definition, but there was a lower limit of $100 for value of products.

The change in the definition of a farm for 1950 resulted in the exclusion of some places with very limited agricultural production which would have qualified as farms under the definitions used in prior censuses. The $150 minimum for the sale of agricultural products required for farms under 3 acres in size for 1950 excluded an unknown number of places of under 3 acres with production limited to home use, or with only incidental sales, which might have been included had the $250 minimum for total production been retained. Likewise, the minimum of $150 agricultural production, whether for home use or for sale, for places of 3 or more acres, resulted in the exclusion of some places which might have qualified as farms under the definition used for prior censuses. See the Introduction to this volume for discussion of the effect of change of definition on the number of farms.

Approximate land area.—Approximate land area includes all land in farms, cities, forests, etc. It includes dry land and land temporarily or partially covered by water, such as marshland, swamps, and river flood plains; streams, sloughs, estuaries, and canals less than one-eighth of a mile in width; and lakes, reservoirs, and ponds having less than 40 acres of area.



Land in farms.—In 1950, the land to be included in each farm was determined by inquiries on the questionnaire. These inquiries related to the number of acres owned, the acres rented from or worked on shares for others, and the acres rented to or worked on shares by others. The enumerator, or respondent in case he filled his own questionnaire, then obtained the acres in the farm by adding the acres owned and acres rented from or worked on shares for others, and subtracting the acres rented to or worked on shares by others. In case of a managed farm, the person in charge gave the total acreage managed for his employer. From the total managed acreage was subtracted any acreage which was rented to or cropped by others.

In earlier censuses, the inquiries were of this nature: "How many acres in this farm do you own?" and "How many acres in this farm do you rent from others?" The assumption was that the enumerator would instruct the respondent as to what land should be included in his farm. With these two inquiries, space was provided for the enumerator to record the number of acres in the farm. For these earlier censuses, the land included in each farm should have been, in accordance with the instructions, the same as that included in the 1950 Census.

The acreage designated "land in farms" includes considerable areas of land not actually under cultivation and some land not used for pasture or grazing. All woodland and wasteland owned by farm operators, or included in tracts rented from others, is included as land in farms unless such land was held for other than agricultural purposes, or unless the acreage of such land held by a farm operator was unusually large. If the total acreage of land owned, rented, or managed by a farm operator was 1,000 or more (5,000 or more in the Western States) and less than 10 percent of the total was used for crops, pasture, or grazing, or was rented to others, any woodland not grazed and any wasteland, in excess of the acreage used for agricultural purposes, was excluded from the farm area. In the South, where persons often operate large landholdings with croppers and other tenants the entire landholding was considered in applying this procedure.

All grazing land was to be included as land in farms, except range open to community use and grazing lands used under government permit. Land used solely by an operator for which no rent was paid was to be included with land rented from others. Grazing lands operated by grazing associations were to be returned in the name of the manager in charge. All land in Indian reservations used for growing crops, or for grazing livestock, was to be included as farm land. Land in Indian reservations, not reported by individual Indians or not rented to non-Indians, was to be reported in the name of the cooperative group using the land. Thus, in some instances, the entire reservation was reported as one farm.

ALL LAND IN FARMS AND CROPLAND HARVESTED, FOR THE UNITED STATES: 1850–1950

Land not in farms.—Land not in farms was obtained by subtracting the area of land in farms from the approximate land area. Estimates on the uses of nonfarm lands were furnished by the Bureau of Agricultural Economics, United States Department of Agriculture. "Grazing land not in farms" includes federally owned lands administered under the Taylor Grazing Act and grazed under permit, grazing lands included in national forests and grazed under permit, also any other public and privately owned grazing lands which were not included with the farm land areas. The livestock-carrying capacity of much of the range land not in farms is low and a large proportion provides only seasonal grazing.

TABLE 1.—NUMBER OF FARMS, ALL LAND IN FARMS, AND VALUE OF FARMS, FOR THE UNITED STATES: 1850 TO 1950

[Data in italics are based on reports for only a sample of farms. See text. Figures for regions, divisions, and States in tables 10 and 19]

Year	Number of farms			All land in farms			Value of farms (land and buildings)				Approximate land area

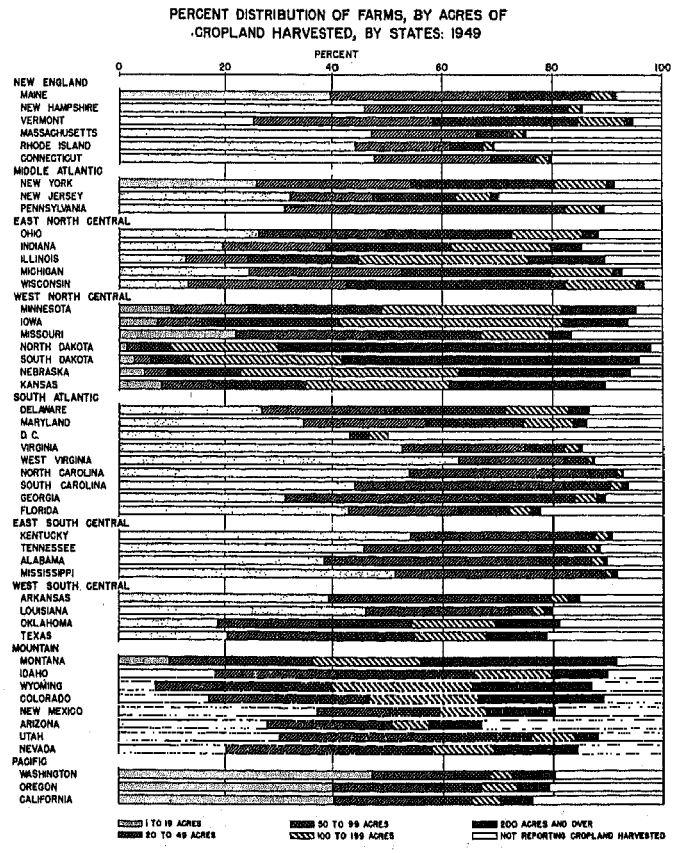
*Not available.

[1] Changes in land area represent changes in boundaries, actual changes due to the construction of reservoirs, to drainage of lakes and swamps, etc., except for 1940, when a complete remeasurement of the United States was made.
[2] Estimates of Bureau of Agricultural Economics, U. S. Department of Agriculture.
[3] In addition to the estimated nonfarm acreage grazed, there probably were 15 to 20 million acres of nonfarm land having some forage value not used for grazing for various reasons.
[4] Land in farms and grazing land not in farms.
[5] Land in farms; grazing land not in farms; and woodland and forests not in farms.

"Woodland not grazed" represents only a part of the commercial forest area not in farms, as a part of the forest area is grazed and is included in the total for grazing land not in farms. "Other land not in farms" includes land occupied by cities and towns, highways and other roads, railways, airports, parks, reservoirs of less than 40 acres, wildlife refuges, military lands, and other special-use areas, also ungrazed desert, open swamp, rock, sand, and some other lands of low surface value.

Grazing permits.—Information regarding the number of farm operators using nonfarm grazing lands under permit from any public agency or grazing association was obtained for 11 Western States by an inquiry "Do you have a grazing permit?" (from the U. S. Forest Service, Grazing Service, etc.). All land operated under lease and used for agricultural purposes was to be included as land in farms. That portion of Federal, State, and other public lands which was leased for grazing was therefore to be included as land in farms. On the other hand, public lands used for grazing under permit were not included. Likewise, any public and privately owned lands used for grazing without a permit or lease were not to be included as land in farms unless they were used solely by one person.

TABLE 3.—FARM OPERATORS WITH GRAZING PERMITS, FOR SPECIFIED STATES: CENSUS OF 1950



State	Land used for grazing in 1949				Farm operators with grazing permits, Apr. 1, 1950 (number)
	Total [1] (acres)	In farms		Not in farms [1] (acres)	
		Farms reporting	Acres		
Total, 11 specified States	**552,241,000**	**298,113**	**254,141,374**	**298,100,000**	**24,818**
Arizona	63,383,000	5,577	38,232,821	25,150,000	1,020
California	53,164,000	52,123	23,364,296	29,800,000	1,450
Colorado	47,661,000	33,386	26,390,635	21,270,000	2,809
Idaho	34,933,000	33,225	7,352,763	27,580,000	3,663
Montana	65,523,000	31,432	45,253,088	20,270,000	4,012
Nevada	58,756,000	2,414	6,430,991	52,325,000	888
New Mexico	68,636,000	15,688	43,810,755	24,825,000	3,015
Oregon	45,427,000	45,649	14,252,261	31,175,000	1,667

Washington	18,714,000	51,341	8,954,015	9,760,000	764
Wyoming	54,535,000	11,250	31,525,162	23,010,000	1,921

[1] Figures for land not in farms used for grazing estimated by Bureau of Agricultural Economics, U. S. Department of Agriculture.

Land in farms according to use.—Land in farms in 1950 was classified according to the use made of it in 1949.

The classes are as follows:

Cropland harvested.—This includes land from which crops were harvested; land from which hay (including wild hay) was cut; and land in small fruits, orchards, vineyards, nurseries, and greenhouses. Land from which two or more crops were reported as harvested was to be counted only once.

The enumerator and the respondent who filled his own questionnaire were instructed to check the reported figure for the

farm by adding the acreages of the individual crops reported and subtracting the acres of land from which two crops were harvested.

Comparable data are available for censuses beginning with 1925. For the census years from 1880 to 1920, the acreage of cropland harvested was not enumerated. The figures shown in the tables for those censuses are a summation of the acreages of the individual crops reported. These figures are not strictly comparable with those for later censuses because the totals of acreages of the individual crops do not include all minor crops; they do not include land in farm gardens; and they do not take into account all duplications from harvesting two or more crops in the same year from the same land. Prior to the 1880 Census no acreage figures were obtained for the various crops, the data being limited to production or value.

Cropland used only for pasture.—In the 1950 Census, the enumerator's instructions stated that rotation pasture and all other cropland used only for pasture were to be included under this item. No further definition of cropland pastured was given to the enumerator. The farm operator who filled his own questionnaire answered this inquiry according to his own judgment as to what constituted cropland, i. e., he had no instructions for making his decision. Permanent open pasture may therefore have been included either under this item or under "other pasture" depending on whether the enumerator or farm operator considered it as cropland.

The figures for 1945 and earlier censuses are not entirely comparable with those for 1950. For the Census of 1945, the data are for a more restricted item, 'cropland used only for pasture plowed within 7 years," and for the censuses of 1940, 1935, 1930, and 1925 the data are for a more inclusive item, "plowable pasture."

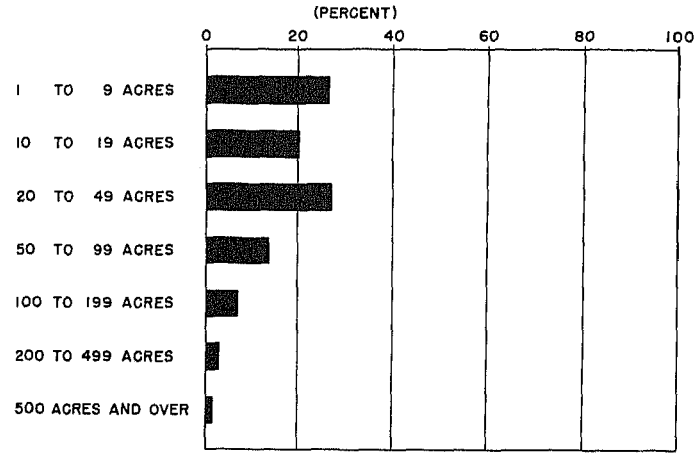
Cropland not harvested and not pastured.—This item includes idle cropland, land in soil-improvement crops only, land on which all crops failed, land seeded to crops for harvest after 1949 (on which no crop was harvested in 1949), and cultivated summer fallow. Data for the censuses from 1925 to 1945 are available separately for "crop failure" and "cropland, idle or fallow."

In 1950, in the 17 Western States (Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming) information for cultivated summer fallow was obtained separately from other cropland not harvested and not pastured. The acreage of cultivated summer fallow is negligible in the other 31 States. Therefore, for these other States the data are presented as though there is no cultivated summer fallow.

Cultivated summer fallow.—Cultivated summer fallow includes cropland which was plowed and cultivated but left unseeded for several months to control weeds and conserve moisture. No land from which crops were harvested during 1949 was to be included under this item. No separate data on cultivated summer fallow are available for earlier censuses.

Other cropland.—In the 17 Western States, an additional inquiry to the one for cultivated summer fallow read as follows:

How many acres of cropland have not been accounted for? . . . . . ☐ None____
(Acres)

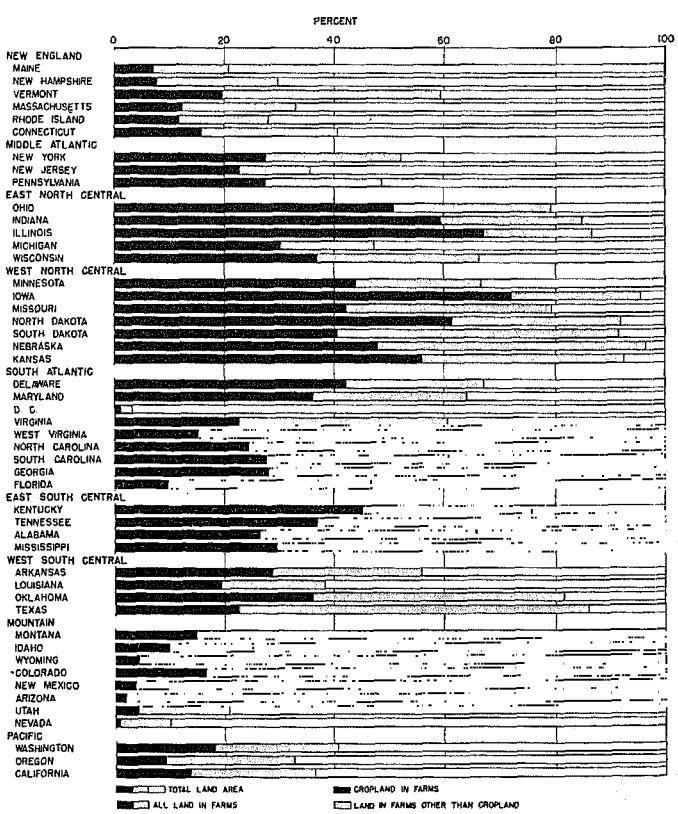


(Include idle land, land in soil-improvement crops only, and land on which all crops failed.)

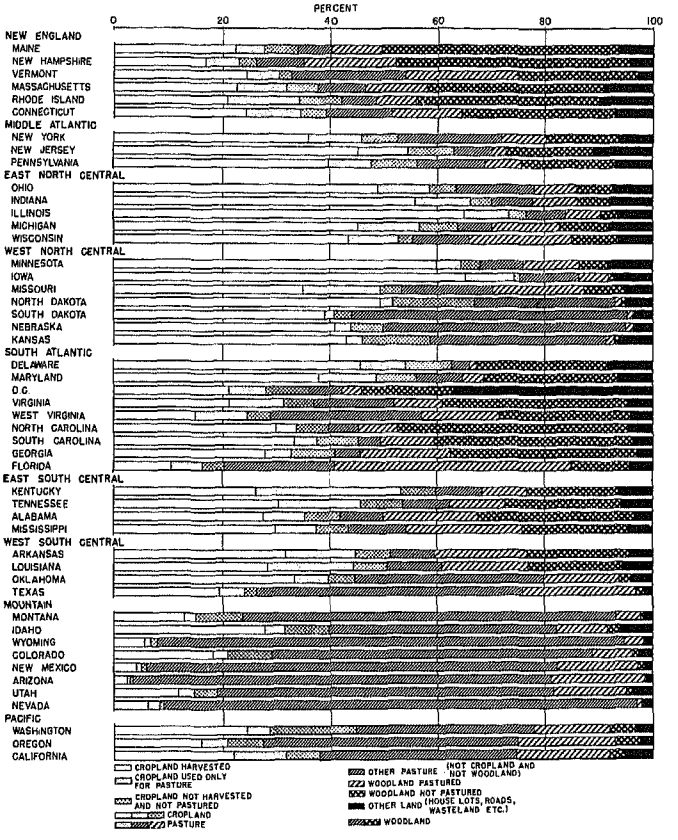
Woodland pastured.—This includes all woodland that was used for pasture or grazing in 1949. No definition of woodland was given in 1950 to either the farm operator or the Census enumerator, except an instruction included in the Enumerator's Reference Manual not to include brush pasture as woodland. Some of the changes from one census to another may represent differences in interpretation of the meaning of woodland.

Woodland not pastured.—This includes all woodland which was not used for pasture or grazing in 1949. Unusually large tracts of timber land, reported as woodland not pastured, were excluded from the tabulations of land in farms when it was evident that such land was held primarily for nonagricultural purposes.

Other pasture (not cropland and not woodland).—This includes rough and brush land pastured and any other land pastured which the respondent did not consider as either woodland or cropland.

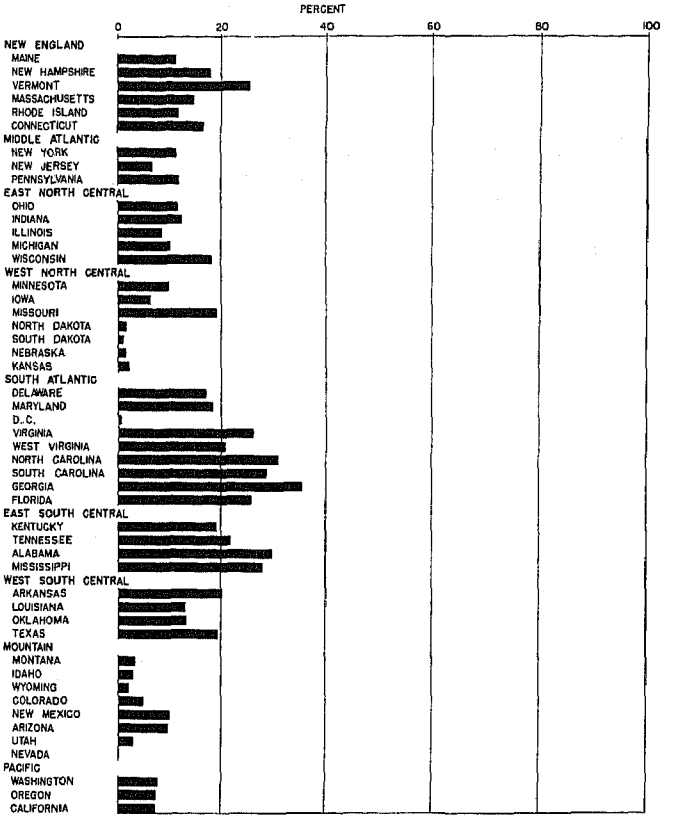


PERCENT DISTRIBUTION OF THE NUMBER OF FARMS BY ACRES OF WOODLAND PASTURED, FOR THE UNITED STATES: 1949

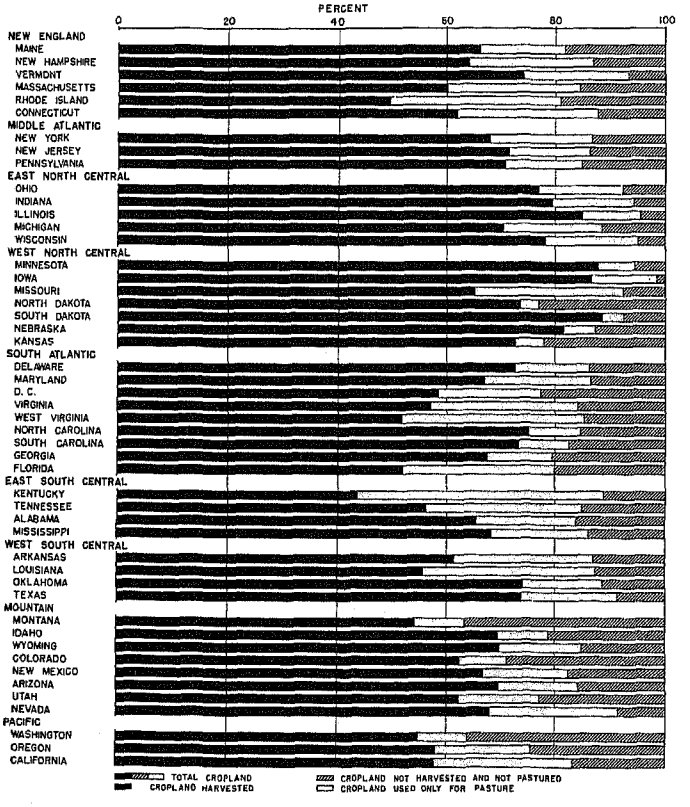


Other land (house lots, roads, wasteland, etc.).—This item includes all house lots, barn lots, lanes, roads, ditches, and wasteland. It includes all land which does not belong under any of the other land-use classes.

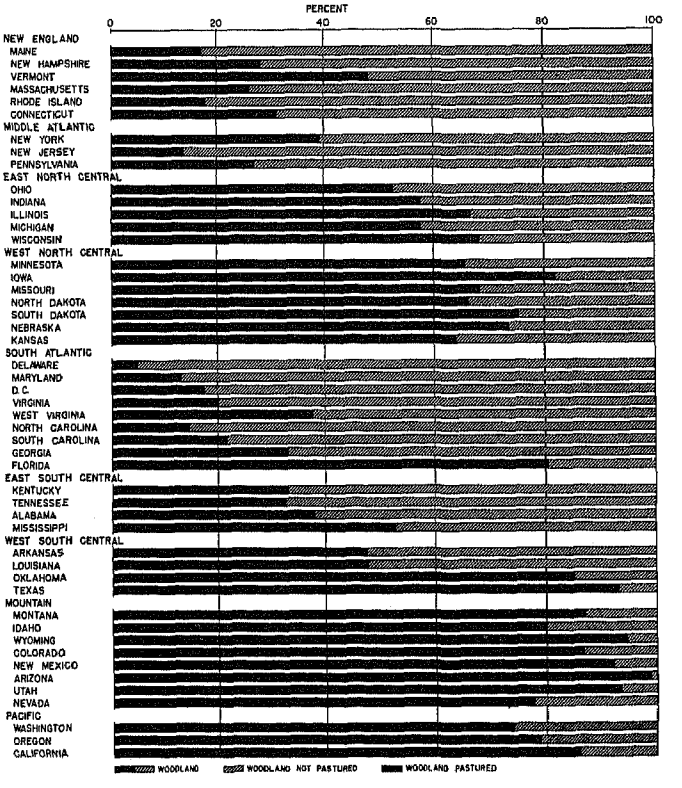
The classes of land are mutually exclusive, i. e., each acre of land was included only once though it may have had more than one use in 1949. If a crop was harvested in 1949 from a given acreage of ground and that acreage was also pastured in that year, such acreage would be counted only once under "cropland harvested" and not under "cropland used only for pasture."



PERCENT OF TOTAL LAND AREA REPRESENTED BY CROPLAND AND OTHER LAND IN FARMS, BY STATES: CENSUS OF 1950



PERCENT DISTRIBUTION OF LAND IN FARMS ACCORDING TO USE, BY STATES: 1949



PERCENT OF TOTAL LAND AREA REPRESENTED BY WOODLAND IN FARMS, BY STATES: CENSUS OF 1950

PERCENT OF CROPLAND IN FARMS REPRESENTED BY THE SEVERAL CLASSES, BY STATES: CENSUS OF 1950

PERCENT OF WOODLAND IN FARMS REPRESENTED BY WOODLAND PASTURED AND WOODLAND NOT PASTURED, BY STATES: CENSUS OF 1950

In addition to the complete classification of land in farms according to use, the tables also present data for three summary classifications. These classes are somewhat overlapping, that is, a part of the acreage included in "cropland, total" is also included in "land pastured, total." Likewise, a part of the acreage included in "land pastured, total" is also included in "woodland, total."

Cropland, total.—This includes cropland harvested, cropland used only for pasture, and cropland not harvested and not pastured. For 1945, the most nearly comparable general class, "cropland other than cropland pasture not plowed within 7 years" represents a more restricted item than "cropland, total" shown for 1950, while the 1940, 1935, 1930, and 1925 item "land available for crops" is less restricted.

Land, pastured, total.—This includes cropland used only for pasture, woodland pastured, and other pasture (not cropland and not woodland).

Woodland, total.—This includes woodland pastured and woodland not pastured.

Land use classifications for prior censuses.—The land-use classification for the Censuses of 1925 to 1945 was quite similar to that used in the 1950 Census, differing as follows: (1) "Plowable pasture" was used in the 1925 to 1940 censuses instead of "cropland used only for pasture"; (2) in the earlier censuses, there were separate inquiries for crop failure and cropland, idle or fallow; (3) cultivated summer fallow, in the earlier censuses, was included with idle cropland; and (4) in 1940, the inquiry on plowable pasture was the only pasture item on the questionnaire. In 1940, all woodland was grouped into one class, and pasture other than plowable and woodland was included as "all other land."

TABLE 4.—ALL LAND IN FARMS AND SPECIFIED USES OF LAND, FOR THE UNITED STATES: CENSUSES OF 1850 TO 1950

[Figures for regions, divisions, and States in tables 10 to 19 and 22]

*Not available.

[1] Prior to 1924, the total acreage of crops for which figures are available, except for 1919 when 14,502,932 acres of corn cut for forage were excluded as most of this was probably duplicated in the acreage of corn harvested as grain.

[2] Much of the change from 1944 to 1949 and from 1939 to 1944 due to change in definition. See text.

[3] Data are for 17 States for which a separate inquiry was included on the questionnaires. Cultivated summer fallow is negligible in other States.

[4] Much of the change from 1944 to 1949 and from 1934 to 1944 due to change in definition. See text.

[5] Includes pasture other than plowable and woodland; also wasteland, house yards, barnyards, feed lots, lanes, roads, etc.

[6] Cropland harvested, cropland used only for pasture, and cropland not harvested and not pastured.

[7] Cropland harvested, cropland used only for pasture plowed within 7 years, and cropland not harvested and not pastured.

[8] Cropland harvested; crop failure; cropland, idle or fallow; and plowable pasture.

[9] Nominally includes all land regularly tilled or mowed; land in pasture that has been cleared or tilled; land lying fallow; land in gardens, orchards, vineyards, and nurseries; and all land occupied by buildings, yards, barnyards, etc. See text.

[10] Data not strictly comparable. See text.

[11] Increase or decrease 1934 to 1939 based on farms reporting and acreage of irrigated cropland harvested only.

[12] Increase or decrease 1930 to 1935 based on reports for 19 States only.

[13] The total acreage of irrigated crops harvested for 1919 was 9,831,368 (includes some duplications and excludes land in orchards and vineyards), and for 1909 was 7,241,561. The reports for crops grown under irrigation for these years, however, were not considered complete.

[1] Cropland harvested, cropland used only for pasture, cultivated summer fallow, and other cropland not harvested and not pastured.
[2] Wheat, oats, barley, rye, and flaxseed harvested for grain.

Cropland used only for pasture plowed within 7 years is used in this report for the 1945 Census. Figures for this class for 1945 were shown under "cropland used only for pasture" in the 1945 reports and in Volume I, "Counties and State Economic Areas" of the 1950 Census of Agriculture reports. "Cropland used only for pasture plowed within 7 years" included land used only for pasture or grazing that had been plowed within the preceding 7 years. Any additional land used only for pasture considered by the farm operator as cropland was excluded by the 1945 inquiry. Some of the difference between totals for cropland used only for pasture for 1949 and cropland used only for pasture plowed within 7 years for 1944 is the result of differences in the wording of the inquiries.

Plowable pasture as used for the 1925 to 1940 censuses was defined as land used only for pasture or grazing which could have been used for crops without additional clearing, draining, or irrigating. Large acreages of land which had never been plowed and never been considered as cropland were included under plowable pasture, particularly in the States lying between the Mississippi River and the Rocky Mountains. "Plowable pasture" differs from the 1950 item "cropland used only for pasture" to the extent that the former includes land pastured (other than cropland) which could have been plowed and used for crops. It differs from the 1945 item "cropland used only for pasture plowed within 7 years" by an additional amount represented by cropland used only for pasture that had not been plowed within 7 years preceding the 1945 Census.

Other pasture (not cropland plowed within 7 years and not woodland) for 1945 and *other pasture (not plowable and not woodland)* for 1935, 1930, and 1925 differ from the 1950 item "other pasture (not cropland and not woodland)" and from each other, by the same amounts that "cropland used only for pasture plowed within 7 years" and "plowable pasture" and "cropland used only for pasture" differ.

Cropland other than cropland pasture not plowed within 7 years for the 1945 Census represents a summary classification which appears in the 1945 reports as "cropland, total" but differs from the 1950 item "cropland, total" by the same amount that the 1945 item "cropland used only for pasture plowed within 7 years" differs from the 1950 item "cropland used only for pasture."

RELATIONSHIP OF ITEMS RELATING TO TOTAL CROPLAND, CROPLAND PASTURE, AND OTHER PASTURE (NOT CROPLAND AND NOT WOODLAND): CENSUSES OF 1925 TO 1950

*Not available.

The figure for the 1945 Census includes cropland harvested, cropland used only for pasture plowed within 7 years, and other cropland not harvested and not pastured.

Land available for crops for the 1925 to 1940 censuses includes cropland harvested; crop failure; cropland, idle or fallow; and plowable pasture. It differs from the 1950 item "cropland, total" and the 1945 item "cropland other than cropland pasture not plowed within 7 years" by the same amounts that "plowable pasture" differs from the 1950 item "cropland used only for pasture" and from the 1945 item "cropland used only for pasture plowed within 7 years."

The items for which comparability from 1925 to 1950 is most affected because of differences in definition are those relating to total cropland, to cropland pastured, and other pasture. The accompanying table shows the differences in the content of these items for the various censuses.

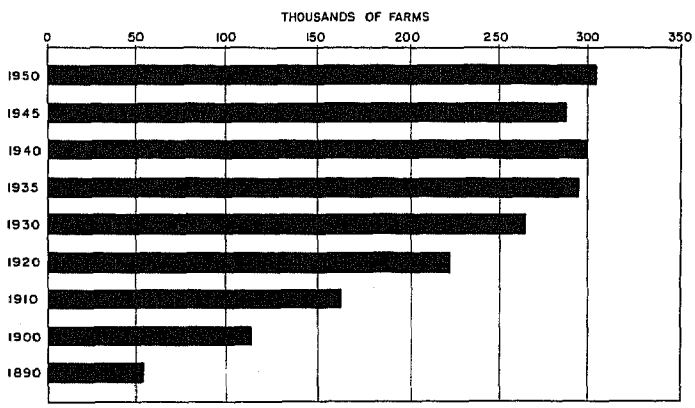
Improved land for 1850 to 1920, in general, included land regularly tilled or mowed; land in pasture that had been cleared or tilled; land lying fallow; land in gardens, orchards, vineyards, and nurseries; and land occupied by buildings, yards, barnyards, etc. Improved land was rather loosely defined at the various censuses, the definition given here representing the one used in the 1920 Census. Prior to 1910, there was no specific mention of land occupied by buildings. In 1900, improved land included all land not classed as unimproved which was defined as "land which has never been plowed, mown, or cropped, including land once cultivated but now grown up to trees and shrubs"; in 1890, permanent meadows or pastures and cultivated forests were included with improved land; in 1880, permanent meadows and pastures were included; in 1870, improved land was identified as "cleared land used for grazing, grass, or tillage, or lying fallow"; in 1860, there were no printed instructions or descriptions; and, in 1850, the instructions again identified improved land as cleared land.

Improved land, as reported for 1850 to 1920, is not exactly comparable with any of the classes of land for 1925 to 1950, but it is more nearly comparable with "cropland, total" for 1950 and 1945 and "land available for crops" for 1925 to 1940.

Irrigation.—Irrigated land is land to which water is applied for agricultural purposes by artificial means. In the 1950 Census, data on total land irrigated in 1949 and on acres irrigated by sprinklers in the same year were obtained for all States. Additional data on irrigation were obtained for 20 States, including the 17 western States and Arkansas, Florida, and Louisiana. In this chapter, data are shown only for the total land irrigated and for land irrigated by sprinklers. Additional data on irrigation are shown in Volume III, "Irrigation of Agricultural Lands," and in Volume I, "Counties and State Economic Areas" of the 1950 Census of Agriculture reports.

In the 20 States the additional information obtained on irrigation includes a breakdown of the total irrigated land into four categories according to use, viz, irrigated cropland harvested, irrigated wild grass pasture, irrigated tame grass pasture, and irrigated cropland not harvested and not pastured; and information as to the specific crops irrigated and the sources of the irrigation water as well as information on irrigation enterprises.

Information on the number of irrigated farms, the total acreage and value of land and buildings, the land in irrigated farms according to use, irrigated land according to use, and classification of irrigated farms by acres irrigated and by tenure of operator, is shown for the 20 States in County Table 1a of the respective parts of Volume I. Data on the individual crops which were wholly irrigated are shown for these States in County Table 5a of the respective parts of Volume I.



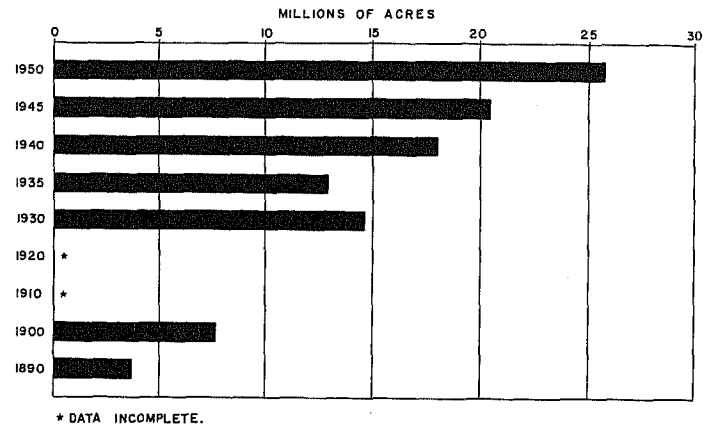
Volume III, "Irrigation of Agricultural Lands," includes data from both the census of irrigation and the census of agriculture. It presents data on irrigation enterprises for counties and drain-

age basins, and a summary for the United States, including the number of enterprises, irrigation works and equipment, sources of water, new capital investment since 1940, cost of irrigation water, the number of farms and acreage irrigated, and quantity of water used for irrigation purposes. Volume III also includes data on number, acreage, and value of irrigated farms, total land in these farms classified according to use and irrigated land in farms by use and the number of irrigated farms by acres irrigated and by the tenure of the operator.

Data relating to irrigation have been obtained in the censuses of agriculture at each decennial census since 1890 and also at the mid-decennial Censuses of 1945 and 1935. For most of these censuses the data were collected for Western States and publication of the data was restricted to those States. For each decennial census beginning with 1900, the number of acres of each crop irrigated was obtained in the census of agriculture. However, these data have not always been considered complete, particularly for the 1920 and 1910 Censuses. At each decennial census, beginning with 1910, there has also been a census of irrigation enterprises. The census of irrigation enterprises covered 20 States in 1950 and 1940, and 19 States in 1930, 1920, and 1910.

IRRIGATED FARMS IN THE UNITED STATES: 1890 TO 1950

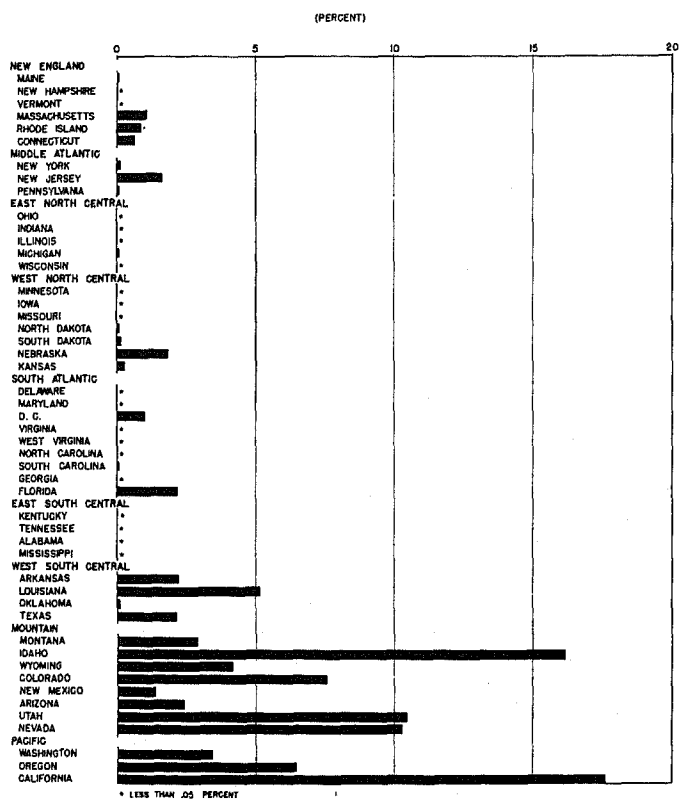
(DATA FOR THE VARIOUS CENSUSES NOT STRICTLY COMPARABLE, SEE TEXT)



Comparability of irrigation data.—The data shown in this volume on number of farms and acreage irrigated are from the various censuses of agriculture.

The irrigation figures presented in this volume from earlier censuses are not entirely comparable with those for 1950. For 1945 and 1950, the inquiry was for all land irrigated and data were obtained for all States. For 1940, the figures related to irrigated cropland harvested and irrigated pasture in all States. For 1935, the figures relate only to irrigated cropland harvested in all States. For 1930, 1920, and 1910, the figures on irrigated farms relate to farms reporting irrigated crops harvested for 19 States. The acreage figures for 1930 are for 19 States and represent the acreage of irrigated crops, including some duplication where two or more crops were harvested from the same land. For the 1920 and 1910 Censuses, acreages of irrigated crops are available for 19 States but the data were not considered to be complete. Therefore, no acreage figures for these years are included in the tables. For the 1900 and 1890 Censuses, the data relate to the number of irrigators and area irrigated. The data for these years, therefore, are comparable, for each of the 19 States for which the data are available, with those for 1950, with the exception of New Mexico for which the acreage figures

IRRIGATED LAND IN FARMS FOR THE UNITED STATES: 1890 TO 1950

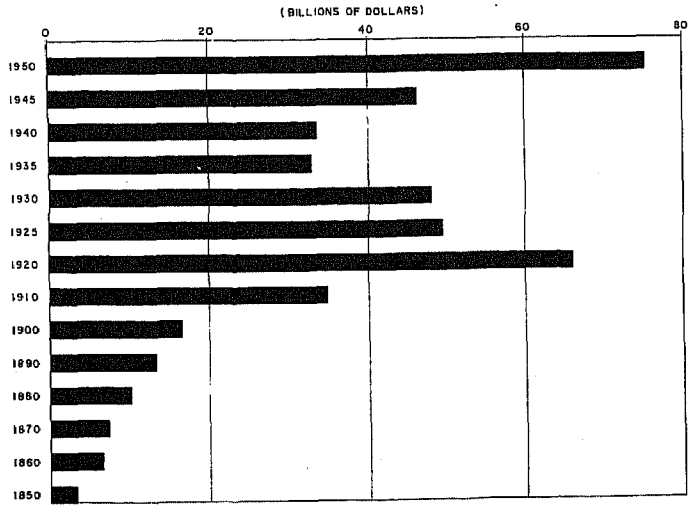


(DATA FOR THE VARIOUS CENSUSES NOT STRICTLY COMPARABLE, SEE TEXT)

do not include the irrigated acres for 1,244 irrigated farms on Indian reservations.

Value of land and buildings.—The value of land and buildings to be reported was the approximate amount for which the land

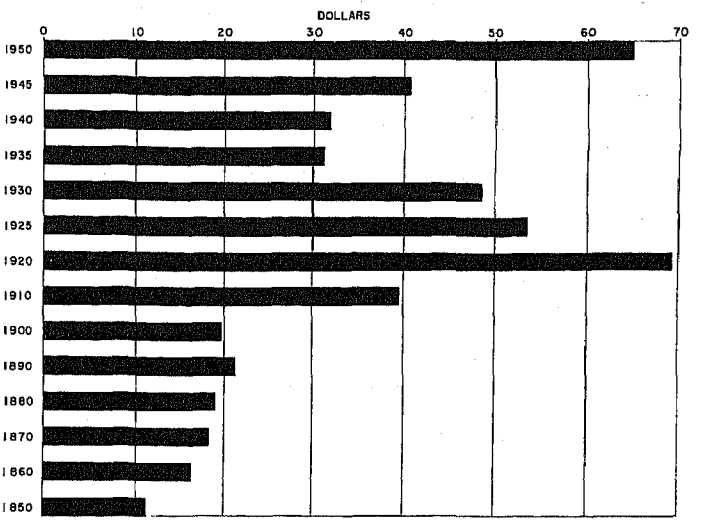
PERCENT OF ALL LAND IN FARMS REPRESENTED BY IRRIGATED LAND, BY STATES: CENSUS OF 1950



and the buildings on it would sell. The respondent was asked to report either the value per acre or the value of the entire farm. For institutional farms and for places on which there were farming and nonfarm activities, the value of nonfarm structures such as institutional buildings, filling stations, cotton gins, tourist cabins, etc., was not to be included.

The value of land and buildings was obtained for only a sample of farms. However, the value of land and buildings was not reported for all the farms included in the sample. For the United States, farms for which the value of land and buildings was reported represented 87 percent of the farms and contained 85 percent of the land in the farms included in the sample. The percentage of the farms and the land in farms for which the value of land and buildings was reported is shown by States in Table 10. The value of land and buildings was not only incompletely reported for all farms in the sample, but in some States the values reported were not fully representative. For the Mountain and Pacific States, values of land and buildings were reported for a much smaller percentage of the larger farms than for the smaller farms. As the larger farms contained a higher proportion of grazing lands, the values reported for the farms in the sample were not fully representative of all farms.

The total value of land and buildings shown for each State, except the 11 Mountain and Pacific States was obtained by multiplying the total acres of land in farms in the State by the average value per acre obtained for the farms included in the sample for which the value of land and buildings was reported. In order to obtain a more accurate figure on values in the 11 Mountain and Pacific States, the total value of land and buildings in each of these States was obtained by multiplying the average value per acre reported for each size-of-farm group by the acres of land in farms for the corresponding size-of-farm group and by adding the calculated total value of land and buildings for all the size-of-farm groups.



The totals for value of land and buildings for geographic divisions were obtained by adding the totals for the States comprising the geographic divisions. Totals for regions and for the United States were obtained also by adding the figures for geographic divisions or regions.

VALUE OF FARM LAND AND BUILDINGS IN THE UNITED STATES: 1850–1950

The average values of land and buildings per farm and per acre are shown in Tables 1, 10, and 19. These were obtained by dividing the total value of land and buildings for the United States, for each region and geographic division, and for each of the 11 Mountain and Pacific States, by the total number of farms and by the acres of all land in farms. The average value per farm for all other States was obtained by dividing the total value for each State by the total number of farms for each State. The average values per farm and per acre shown in Volume I and in Chapters X, XI, XII, and XIII of this volume represent averages obtained for the farms included in the sample for which the value of land and buildings was reported. Therefore, the average value

AVERAGE VALUE OF LAND AND BUILDINGS PER ACRE, FOR THE UNITED STATES: 1850–1950

of land and buildings per farm for all States and per acre for the 11 Western States shown in this chapter differ from those given in other chapters of this volume and Volume I.

The value of land and buildings has been obtained for each census, beginning with 1850. The value figures shown for each census presumably represent the market value on the census date, although specific mention of evaluating the property for the amount for which it would sell first appeared in the instructions for the 1900 Census. Prior to that time, the inquiries asked for "cash value" or merely "value," without further qualification. Except for 1870, the values presented in this chapter for each census are the same as are shown in the reports for those censuses. The 1870 figures are the same as those carried in the reports for 1880 and subsequent censuses and represent an adjustment of the original figures to a gold basis. These figures were approximately one-fifth less than the figures reported in 1870.

Population.—Most of the population data presented in this chapter were obtained in the decennial censuses of population. The data on farm population for 1945, 1935, and 1925 were obtained in the censuses of agriculture for those years. The figures shown for total population for 1945, 1935, and 1925 represent estimates of the Bureau of the Census.

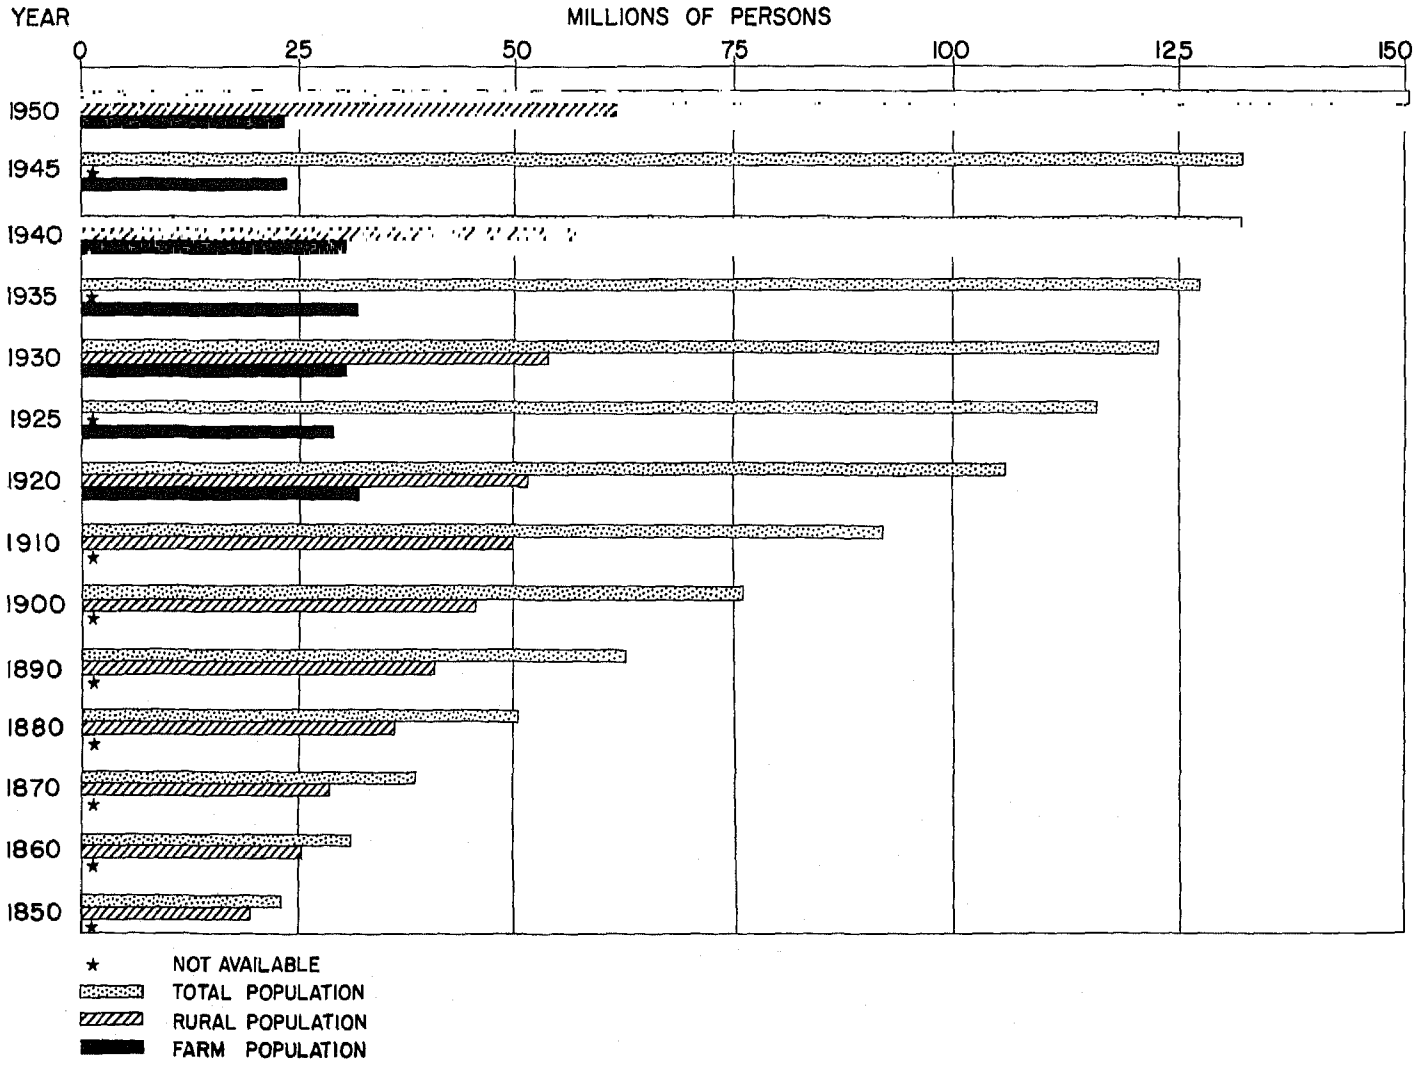
Rural population.—As defined by the Bureau of the Census, rural population consists of persons not classed as urban population. Urban population comprises all persons living in (*a*) places of 2,500 inhabitants or more incorporated as cities, boroughs, and villages, (*b*) incorporated towns of 2,500 inhabitants or more except in New England, New York, and Wisconsin, where "towns" are simply minor civil divisions of counties, (*c*) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more, and (*d*) unincorporated places of 2,500 inhabitants or more outside any urban fringe.

The figures presented for rural population for 1950 are based on the definition used in the 1940 and 1930 Censuses of Population. According to that definition, rural population was, in general, that residing outside cities and other incorporated places of 2,500 inhabitants or more. The data presented for 1920 and earlier censuses represent revisions on the basis of the 1940 and 1930 definitions and, therefore, are not in exact agreement with those published in the reports for censuses prior to 1930.

Farm population.—In the 1950 Census, farm population was determined largely by the residents themselves. If the respondent, in reply to a direct inquiry, considered his house located on a farm, the house was, in most cases, considered a farm dwelling and the occupants were considered part of the farm population.

Certain types of dwelling units and their occupants, however, were automatically considered nonfarm irrespective of the statement of the respondent or the existence of farming operations on the property. These were:

(1) Farm houses rented by persons who paid cash rent for the house but who did not rent any of the farm land.



(2) Tourist cabins built by a farmer on his property.

(3) Living quarters located on the grounds of an institution (such as a mental or penal institution, old-age home, "poor" farm, school for handicapped children, etc.) even though a farm was operated in conjunction with the institution.

The 1950 figures for farm population cannot be exactly related to the 1950 count of farms. Although enumerators were required to fill agriculture questionnaires for all places which the respondent considered a farm, many of these places did not meet the minimal requirements of $150 total agricultural production for places of 3 acres or more, or $150 sales for places under 3 acres. Such places are not included in the count of farms but the people living on them are included in the farm population. In other words, no adjustment was made in the farm population figures when agriculture questionnaires were rejected. On the other hand, persons on places meeting the requirements of a farm for purposes of the census of agriculture but not considered a farm by the respondent were not included as farm population. See the Introduction to this volume in regard to places for which agricultural questionnaires were required.

The data shown for farm population for earlier censuses are not entirely comparable with those shown for 1950. The data for 1945, 1935, and 1925 were obtained in the censuses of agriculture for those years by asking, for each farm, the number of persons living on that farm. In general, the figures tend to be lower than those obtained in a population census where the enumerator calls on every household. In the population censuses, the classification of farm population has depended more on whether the enumerator considered the household as living on a farm than on whether the place was classed as a farm in the agriculture census. Although the farm population figures shown for 1940, 1930, and 1920 are from the population censuses for these years, they are not fully comparable with the 1950 data because of changes in definition and procedures. The 1950 data are probably less inclusive than those for earlier years, particularly those for 1940. (For further discussion of comparability of the

TOTAL, RURAL, AND FARM POPULATION IN THE UNITED STATES: 1850 TO 1950

farm population data for 1950 and earlier censuses of population, see the reports of the 1950 Census of Population.)

CHANGES IN FARMS AND LAND IN FARMS

Comparability of the data for 1950 with those for earlier censuses is affected by differences in definitions and procedures. The effect of these differences on the number of farms has been discussed in the Introduction to this volume.

Comparability of totals for land in farms and for the various land uses, particularly at the county level, is also affected by the Census procedure of crediting the entire acreage of a farm, with land in two or more counties, to the county in which the farm headquarters is located. Some of the changes for a county, from one census to another, can often be attributed to changes in the counties to which particular tracts of land are credited. For example, land credited to a farm in one county at one census may later be acquired, through rental or ownership, by a farm in another county. Such land would then be credited to this other county at the next census. These changes resulting from changes in location of the farm headquarters, are important factors affecting the area of land in farms, particularly in the West and other areas where much of the land is leased, or where landholdings are large. Such changes are not important factors in areas where there are few farms containing 1,000 acres or more of land.

[2] 1945 and 1935 averages based on farm population as obtained in the censuses of agriculture for those years.

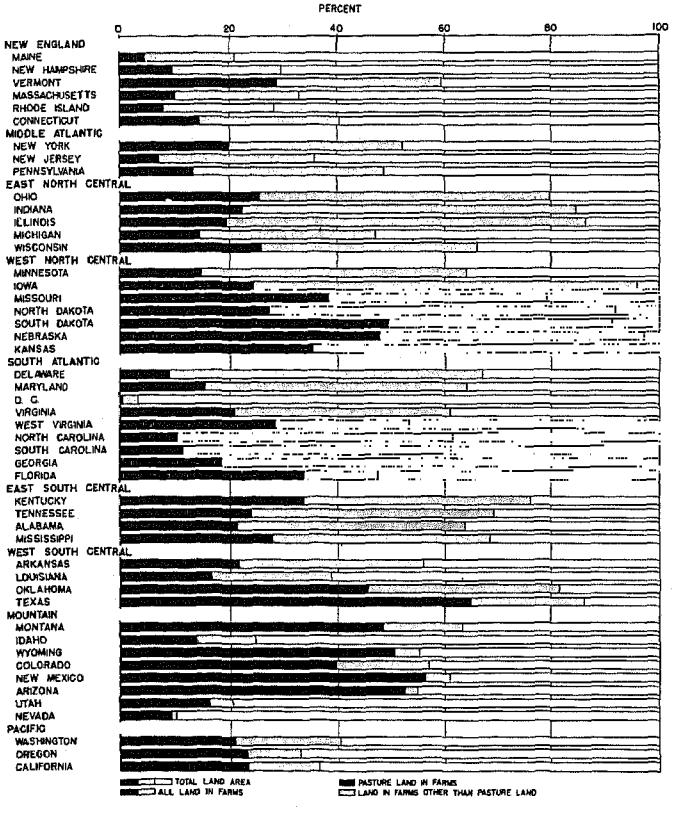
In some of the counties in the South, comparability of 1950 data for farms and for land in farms with those for 1945 is affected by differences in the method of enumerating tenant farms closely supervised by the landlord. In 1945, all the farms in a multiple-unit operation were enumerated in the county in which the multiple-unit headquarters was located. For that year, a multiple-unit operation consisted of all the land assigned to closely supervised tenants plus the "home farm" (land retained and operated by the landlord). In 1950, each farm in a multiple unit was enumerated in the county where that particular farm was located. A procedure similar to that for 1950 was also followed in 1940 and earlier censuses.

Changes in the number of farms.—The number of farms in the United States was 5,382,162 in 1950 as compared with 5,859,169 in 1945, a difference of 477,007, or 8.1 percent. Changes in the number of farms are related to changes in the definition of a farm. An analysis of the changes in the number of farms is shown in the Introduction to this volume and reference should be made to that analysis for information regarding changes in the number of farms.

Changes in land in farms.—Land in farms totaled 16,950,488 acres, or 1.5 percent, more in 1950 than in 1945. For the South, the net increase in land in farms was 15,420,461 acres or 4.1 percent. For the West, the increase was 8,417,331 acres or 2.7 percent. However, the acreage of land in farms in the North was 6,887,304 acres, or 1.5 percent less in 1950 than 1945. Land in farms was less in 1950 than in 1945, mainly in all States eastward from Minnesota, Iowa, and Missouri. Decreases in land in farms from 1945 to 1950, accompanied a decrease in the number of farms. Among the geographic divisions, the greatest decrease in land in farms occurred in New England, which had 13.5 percent less acreage in farms and 31.3 percent fewer farms in 1950 than in 1945.

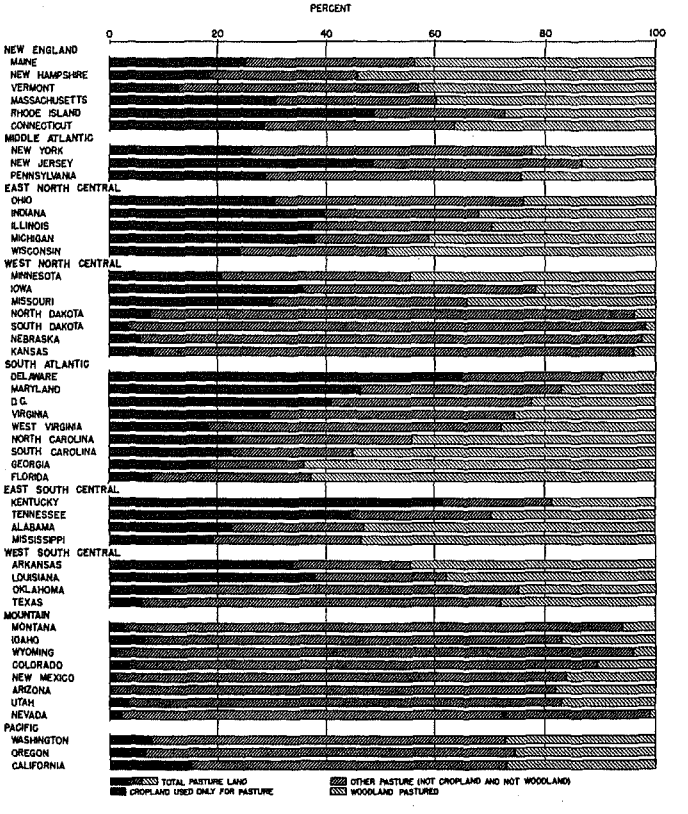
Increases in land in farms consisted largely of increases in woodland and land pastured. In the Mountain and Pacific States, some of the increases may not represent actual gains in land used for agricultural purposes. Some of the increases in land pastured represent grazing lands formerly in open range. Changes in the

administration and management of range lands have increased the acreage of land reported in farms in the Western States. Although much of the Federal grazing land is handled on a permit basis (which land was not to be included as land in farms), there has been an increase in the amount being leased. These leased lands were to be included as land in farms. Reports of the Secretary of Interior for 1950 and 1945 show that, of the grazing lands administered under the Taylor Grazing Act, 13,033,956 acres were leased in 1950 as compared with 11,310,316 acres in 1945 and 7,411,987 acres in 1940.

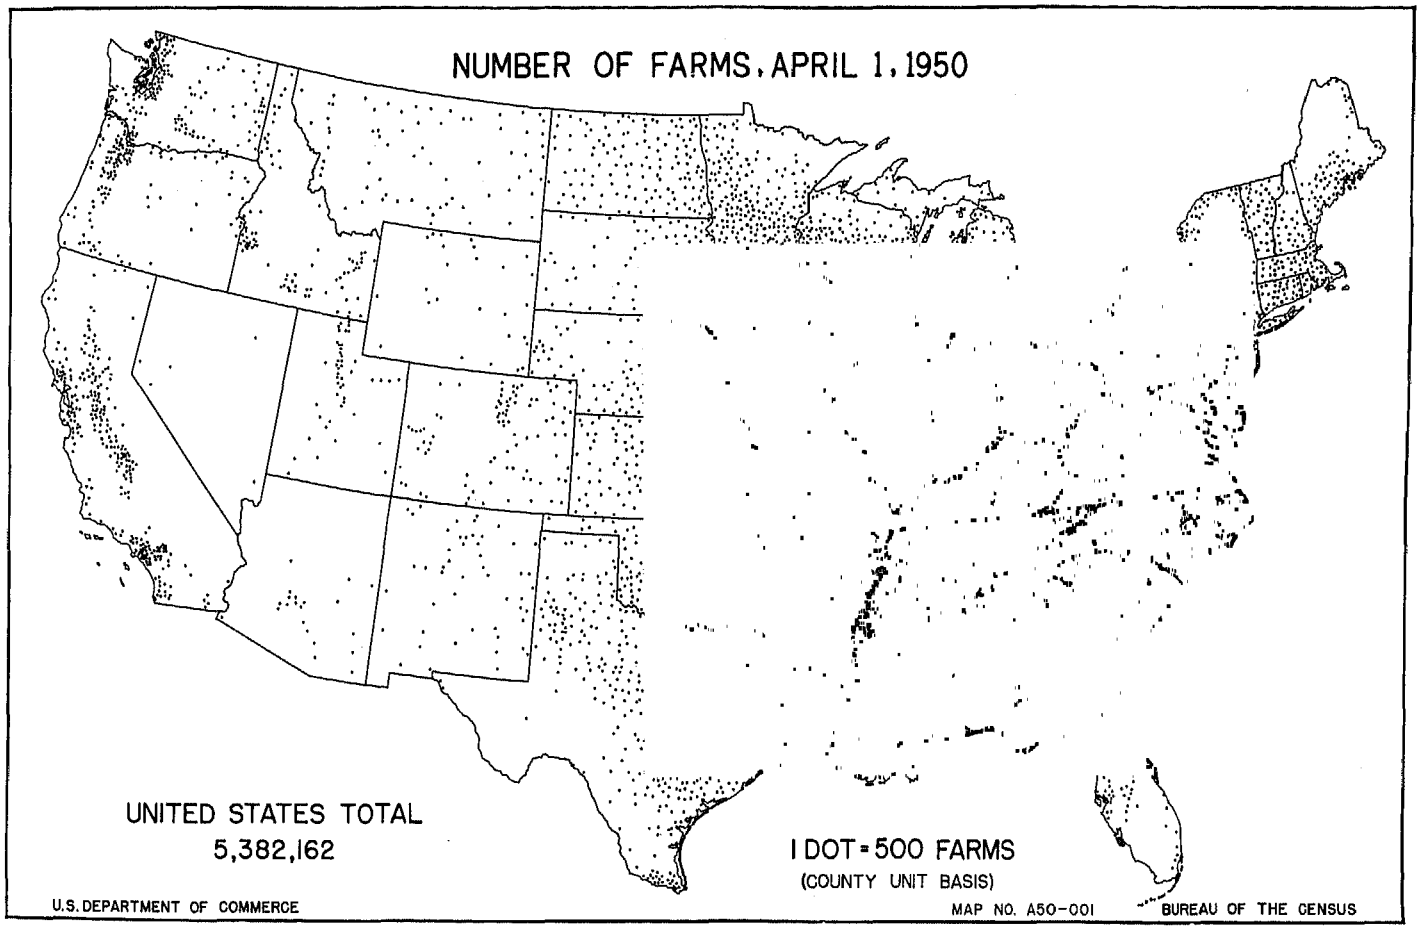


Some of the increases in the acreage of land in farms may have been the result of changes in definitions and procedures which resulted in obtaining a better enumeration of land controlled by farm operators. The asking for all land owned and for all land rented from others as well as land rented to others, to determine the land in farms, probably resulted in the inclusion of some land which was omitted in earlier censuses when the census enumerator determined the area in each farm. In the South, much of the increase in the land in farms in the landlord-tenant area resulted from: (1) the use of the Landlord-Tenant Operations Questionnaire in conjunction with the agriculture questionnaire; (2) the procedure of including all tracts of 3 or more acres retained by landlords who rented their cropland to tenants, as farms; and (3) the procedure of considering the agricultural use of all land in the landlord holding when determining land to be excluded because of nonagricultural use. (See "Land in farms," this chapter, and the Introduction to this volume.)

Changes in the use of land in farms.—The most significant changes in land use which occurred between 1945 and 1950, were the increase of cropland harvested in the dry-land farming areas of the Great Plains and the Northwest, the increase in cropland harvested resulting from increased acreages under irrigation, and increases in cropland harvested throughout much of the Corn Belt. Nothwithstanding these increases, there was a net loss for the United States as a whole of 8,467,215 acres of cropland harvested or 2.4 percent. Most of these losses, however, were in the poorer agricultural areas and accompanied losses in farms.



The total acreage of land pastured changed very little, with the United States total for 1950 differing from 1945 by less than 1 percent. The largest decreases were in the northeastern States, accompanying the losses of farms in that area, while the largest increases were in the South, representing part of the increases in total land in that area. Decreases of pasture acreage in the Great Plains and western States occurred because of the increase in cropland harvested in those areas.



Increases in woodland in farms were rather general in all areas except those where there was a loss in total land in farms. The increases resulted from increases of land in farms, land once cleared becoming covered with woody growth, and from differences in the interpretation of the meaning of woodland. The largest increases in woodland were in Texas where nearly twice as much woodland was reported in 1950 as in 1945. Most of the increases in woodland in Texas resulted from reporting as woodland in 1950 land which was reported as other pasture in 1945.

Table 12.—PERCENT DISTRIBUTION OF FARMS, LAND IN FARMS, AND THE SEVERAL CLASSES OF LAND ACCORDING TO USE, BY DIVISIONS AND STATES: CENSUS OF 1950

[Data for number of farms and total land relate to 1950 and for uses of land to 1949. Base data in tables 10 and 11]

	Region, division, and State	Number of farms	Approximate land area	Land in farms	Cropland harvested	Cropland used only for pasture	Cropland not harvested and not pastured			Woodland pastured	Woodland not pastured	Other pasture (not cropland and not woodland)	Other land (house lots, roads, wasteland, etc.)	Cropland, total	Land pastured, total	Woodland, total
							Total	Cultivated summer fallow	Other

[1] Cropland harvested; cropland used only for pasture; and cropland not harvested and not pastured. [2] Cropland harvested; cropland used only for pasture plowed within 7 years; and cropland not harvested and not pastured. [3] Cropland harvested; crop failure; cropland, idle or fallow; and plowable pasture. [4] The inquiry on cultivated summer fallow was not on the questionnaires for those States in which summer fallow is negligible.

TO USE IN 1949, 1944, AND 1939, BY DIVISIONS AND STATES—Continued

[1] Cropland harvested; cropland used only for pasture; and cropland not harvested and not pastured. [2] Cropland harvested; cropland used only for pasture plowed within 7 years; and cropland not harvested and not pastured. [3] Cropland harvested; crop failure; cropland, idle or fallow; and plowable pasture. [4] The inquiry on cultivated summer fallow was not on the questionnaires for those States in which summer fallow is negligible. [5] 0.05 percent or less.

Table 15.—NUMBER OF FARMS REPORTING THE SEVERAL CLASSES OF LAND

	Region, division, and State	Cropland harvested			Cropland pastured			Cropland not harvested and not pastured						
								1949			Crop failure		Idle or fallow	
		1949	1944	1939	Cropland used only for pasture, 1949	Cropland used only for pasture plowed within 7 years, 1944	Plowable pasture, 1939	Total	Cultivated summer fallow	Other	1944	1939	1944	1939

[1] Cropland harvested; cropland used only for pasture; and cropland not harvested and not pastured. [2] Cropland harvested; cropland used only for pasture plowed within 7 years; and cropland not harvested and not pastured. [3] Cropland harvested; crop failure; cropland, idle or fallow; and plowable pasture. [4] The inquiry on cultivated summer fallow was not on the questionnaires for those States in which summer fallow is negligible.

ACCORDING TO USE, BY DIVISIONS AND STATES: 1949, 1944, AND 1939

Woodland pastured		Woodland not pastured		Other pasture		Other land			Cropland			Land pastured, total		Woodland, total			
				Not cropland and not woodland, 1949	Not cropland plowed within 7 years and not woodland, 1944	House lots, roads, wasteland, etc.		House lots, roads, wasteland, etc., and pasture other than plowable and woodland, 1939	Total, 1949[1]	Cropland other than cropland pasture not plowed within 7 years, 1944[2]	Land available for crops, 1939[3]

[1] Cropland harvested; cropland used only for pasture; and cropland not harvested and not pastured. [2] Cropland harvested; cropland used only for pasture plowed within 7 years; and cropland not harvested and not pastured. [3] Cropland harvested; crop failure; cropland, idle or fallow; and plowable pasture. [4] The inquiry on cultivated summer fallow was not on the questionnaires for those States in which summer fallow is negligible.

ACCORDING TO USE, BY DIVISIONS AND STATES: 1949, 1944, AND 1939

[1]Cropland harvested; cropland used only for pasture; and cropland not harvested and not pastured. [2]Cropland harvested; cropland used only for pasture plowed within 7 years; and cropland not harvested and not pastured. [3]Cropland harvested; crop failure; cropland, idle or fallow; and plowable pasture. [4]The inquiry on cultivated summer fallow was not on the questionnaires for those States in which summer fallow is negligible.

ACCORDING TO USE, BASED ON ALL FARMS. BY DIVISIONS AND STATES: CENSUSES OF 1950, 1945, AND 1940

uses of land to 1949, 1944, and 1939. Base data in tables 10 and 13]

Woodland pastured (acres)		Woodland not pastured (acres)		Other pasture (acres)		Other land (acres)			Cropland (acres)			Land pastured, total (acres)		Woodland, total (acres)			
1949	1944	1949	1944	Not cropland and not woodland, 1949	Not cropland plowed within 7 years and not woodland, 1944	House lots, roads, waste-land, etc. 1949	House lots, roads, waste-land, etc. 1944	House lots, roads, wasteland, etc., and pasture other than plowable and woodland, 1939	Total, 1949[1]	Cropland other than cropland pasture not plowed within 7 years, 1944[2]	Land available for crops, 1939[3]	1949	1944	1949	1944	1939

[1]Cropland harvested; cropland used only for pasture; and cropland not harvested and not pastured. [2]Cropland harvested; cropland used only for pasture plowed within 7 years; and cropland not harvested and not pastured. [3]Cropland harvested; crop failure; cropland, idle or fallow; and plowable pasture. [4]Based on all tractors. [5]The inquiry on cultivated summer fallow was not on the questionnaires for those States in which summer fallow is negligible.

LAND ACCORDING TO USE, BY DIVISIONS AND STATES: 1949, 1944, AND 1939

See text. Base data are shown in tables 13 and 15]

Other pasture (acres)		Other land (acres)			Cropland (acres)			Land pastured, total (acres)		Woodland, total (acres)			Average acreage of cropland harvested—						
Not cropland and not woodland, 1949	Not cropland plowed within 7 years and not woodland, 1944	House lots, roads, wasteland, etc.		House lots, roads, wasteland, etc., and pasture other than plowable and woodland, 1939	Total, 1949[1]	Cropland other than cropland pasture not plowed within 7 years, 1944[2]	Land available for crops, 1939[3]						Per wheel or crawler tractor			Per horse or mule

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

Table 19.—NUMBER OF FARMS, ALL LAND IN FARMS, CROPLAND HARVESTED, AND VALUE OF FARMS, BY REGIONS AND STATES: CENSUSES OF 1850 TO 1950—Continued

[Figures for cropland harvested relate to the crop year immediately preceding the census date; other data relate to the census date: Jan. 1 for 1945, 1935, 1925, and 1920; Apr. 1 for 1950, 1940, and 1930; Apr. 15 for 1910; June 1 for earlier censuses. Data in italics are based on reports for only a sample of farms. See text]

Region, State, and year	Number of farms			All land in farms					Cropland harvested[1]				Value of farms (land and buildings)[2]			
	Total	Increase or decrease (-)		Acres	Increase or decrease (-)		Percent of total land area[3]	Average acreage per farm	Acres	Percent increase or decrease (-)	Percent of all land in farms	Average acreage per farm (all farms)	Total (dollars)	Percent increase or decrease (-)	Average per farm (dollars)	Average per acre (dollars)

*Not available.

[1] Prior to 1924, the data relate to the total acreage of crops for which figures are available, except for 1919 when 14,502,932 acres of corn cut for forage were excluded (as most of this was probably duplicated in the acreage of corn harvested for grain).

[2] The total value for each State for 1950 was obtained by multiplying the total land in all farms by the average value per acre based on farms in the sample. See text.

[3] Percentages for 1950 are based on land areas as shown in tables 1 and 10. Percentages for earlier years are based on land areas as published in Census reports for those years. United States land areas, for earlier years, are shown in table 1. For 1850, the percentage for the United States was based on total land area, including 297,976,960 acres of unorganized territory omitted in the calculations for regions and States.

[4] 0.05 percent or less.

[5] 1,000 percent or more.

[6] Figures for 1880 were obtained by consolidating data for the counties which then occupied the area now known as North Dakota.

[7] The 1870 and 1860 figures are for Dakota Territory.

[8] Figures for 1880 were obtained by consolidating data for the counties which then occupied the area now known as South Dakota.

[9] In 1860 and 1850, Virginia included the area now known as West Virginia.

[10] Figures for 1900 are for Oklahoma Territory and Indian Territory.

[11] The 1890 figures for number of farms, farm acreage, and value are for Oklahoma Territory alone, no data for these items being available for Indian Territory; the percent of total land area in farms is based on the total land area of Oklahoma Territory plus Indian Territory; acreage shown under cropland harvested includes 35,078 acres of cotton in Indian Territory estimated from a special survey.

[12] There was no enumeration of farms in 1880 in what is now known as Oklahoma; the figure shown under cropland harvested consists of cotton acreage reported for Indian Territory by special agent.

Table 20.—FARMS BY ACRES OF CROPLAND HARVESTED, BY DIVISIONS AND STATES: 1949 AND 1944

[Data in italics are based on reports for only a sample of farms. See text. Figures for all farms and for total farms reporting and acres of cropland harvested are in table 11]

Table 20.—FARMS BY ACRES OF CROPLAND HARVESTED, BY DIVISIONS AND STATES: 1949 AND 1944—Continued

[Data in italics are based on reports for only a sample of farms. See text. Figures for all farms and for total farms reporting and acres of cropland harvested are in table 11]

	Region, division, and State	Farms by acres of cropland harvested—Continued		Percent distribution of farms by acres of cropland harvested																		Average acreage of cropland harvested per farm reporting	
		Not reporting		1 to 9		10 to 19		20 to 29		30 to 49		50 to 99		100 to 199		200 to 499		500 to 999		1,000 and over		Not reporting

[1] Estimates of Bureau of Agricultural Economics, United States Department of Agriculture. [2] Land in farms and grazing land not in farms. [3] Land in farms; and grazing land not in farms; and woodland and forests not in farms. [4] In addition to the estimated nonfarm acreage grazed there probably were 15 to 20 million acres of nonfarm land having some forage value not used for grazing for various reasons. [5] Less than 500 acres.

Table 24.—FARM POPULATION, BY DIVISIONS AND STATES: CENSUSES OF 1950, 1945, AND 1940

	Region, division, and State	Total farm population[1]							Average per capita (based on farm population)									Rural-farm population		Urban-farm population	
		1950	1945	1940	Percent increase or decrease(-), 1940-1950	Percent of total population			Average per farm			Land in farms (acres)			Cropland harvested (acres)			Value of farm products sold			1950	1940	1950	1940
						1950	1945[2]	1940	1950	1945	1940	1950	1945	1940	1949	1944	1939	1949	1944	1939

TABLES FOR THE UNITED STATES

Table—	Page
1.—Farm operators reporting residence on or off farm, for specified counties: 1950 and 1940	71
2.—Years on farm as classified for each census, with the number of operators in each classification: 1910 to 1950	72
3.—Farm operators on present farm 1 year or less, by month of occupancy, for the United States: 1950	73
4.—Residence of farm operators, 1950, 1945, and 1940; off-farm work by farm operators, 1929 to 1949; and other income, 1949; for the United States	74
5.—Farm operators in each tenure, by age, for the United States: 1890 to 1950	84
6.—Farm operators in each color and tenure, by age, for the South: 1890 to 1950	86
7.—Operators of commercial and other farms in each tenure, by age, for the United States, the North, and the West, and in each color and tenure for the South: 1950	90
8.—Residence of farm operators, by tenure, for the United States: 1950, 1945, and 1940	96
9.—Residence of farm operators, by color and tenure, for the South: 1950, 1945, and 1940	96
10.—Residence of operators of commercial and other farms, by tenure, for the United States, the North, and the West, and by color and tenure for the South: 1950	97
11.—Farm operators in each tenure, by years on present farm, with percent distribution, for the United States: 1910 to 1950	99
12.—Farm operators in each color and tenure, by years on present farm, with percent distribution, for the South: 1910 to 1950	100
13.—Operators of commercial and other farms in each tenure, by years on present farm, with percent distribution, for the United States, the North, and the West, and in each color and tenure for the South: 1950	103
14.—Off-farm work by farm operators, for the United States: 1929 to 1949	106
15.—Off-farm work by farm operators, by tenure, for the United States: 1934 to 1949	106
16.—Off-farm work by farm operators, by color and tenure, for the South: 1934 to 1949	107
17.—Off-farm work by operators of commercial and other farms, and other income, by tenure of operator, for the United States, the North, and the West, and by color and tenure of operator for the South: 1949	109

TABLES FOR GEOGRAPHIC REGIONS, DIVISIONS, AND STATES

Table—	Page
18.—Farm operators, by age, by divisions and States: 1950, 1945, and 1940	113
19.—Farm operators in each tenure (color and tenure for the South), by age, by divisions and States: 1950	116
20.—Residence of farm operators, by divisions and States: 1950, 1945, and 1940	140
21.—Residence of farm operators, by tenure (color and tenure for the South), by divisions and States: 1950	142
22.—Farm operators, by years on present farm, by divisions and States: 1950, 1945, and 1940	152
23.—Farm operators in each tenure (color and tenure for the South), by years on present farm, by divisions and States: 1950	154
24.—Farm operators, by year of occupancy of present farm, by divisions and States: Census of 1950	174
25.—Farm operators on present farm 1 year or less, by month of occupancy, by divisions and States: Census of 1950	176
26.—Off-farm work by farm operators, 1929 to 1949; and other income, 1949; by divisions and States	178
27.—Off-farm work and other income, by tenure of operator, by divisions and States: 1949	180

CHAPTER II.—AGE, RESIDENCE, YEARS ON FARM, WORK OFF FARM

Introduction.—This chapter presents statistics relating to operators of farms. The figures are shown for operators for classifications based upon the following characteristics: age; place of residence (whether on or off the farm operated); number of years on their present farms, and, for those who reported a recent date, the month they began to operate their present farms; number of days worked off their farms during the year preceding the census date; and whether other income of the operator and his family exceeded the total value of agricultural products sold. The usefulness of these data has been increased by a further classification by color and tenure of the operator.

Sources of data.—The data presented are from the 1950 Census of Agriculture with comparative data from earlier censuses. While inquiries relating to these subjects were asked of all farm operators in 1950, the greater part of the data was tabulated for only a sample consisting of approximately 20 percent of the farm operators. All 1950 data relating to age of operator and to year and month of occupancy (or years on farm) represent estimates based on tabulations for a sample. In some of the tables, the 1950 data for residence of operator, off-farm work, and income other than that from the farm operated are based on tabulations for all farms, while in other tables, they represent estimates based on tabulations for a sample of the farm operators. All the 1950 data presented by color and tenure of operator are estimates based on tabulations for a sample of farm operators. Estimates based on tabulations for a sample are subject to sampling errors. The estimates based on a sample are not in exact agreement with the totals secured from tabulations for all farm operators. Tables giving reliability of estimates, based on a tabulation for a sample of farm operators, are given in the Introduction to this volume. The Introduction also presents a description of the procedures used in the enumeration and processing of the statistics and of the sampling plan used in 1950.

The 1945 data by tenure of operator, presented herein, are also based on a tabulation for a sample consisting of approximately 5 percent of the farm operators for that year. Other 1945 data and all data for earlier years represent a tabulation of the reports for all farms. All tables which include estimates based on tabulations for a sample of the farm operators have a headnote indicating which of the figures are estimates based on the sample.

Presentation of statistics.—The statistics are presented as totals for the continental United States, for 3 major regions, for 9 geographic divisions, and for each of the 48 States and the District of Columbia. An outline map showing the States and the geographic divisions and regions for which totals are presented appears in the Introduction to this volume.

Comparable data from earlier censuses provide a measure of the changes that have occurred from census to census. Most of the available comparative data are shown for the United States. Historical data for regions, divisions, and States are shown only for selected census years. In presenting statistics for earlier census years, headnotes, footnotes, and the wording of the stub or of the column headings are used to indicate any significant lack of comparability which may have resulted from changes in the wording of the inquiries, in the instructions or definitions, or in the procedures used in collecting and compiling the data. The text discussion for the various items gives further information as to comparability of the data.

Data are presented for all items by tenure of operator for the United States and the Northern and Western States, and by color and tenure of operator for the Southern States.

The tabular presentation is supplemented by maps and charts.

Other published data.—Data for counties, based on a complete tabulation for all farms, are presented for residence of operator, for off-farm work, and for other income in Volume I, Counties and State Economic Areas, of the 1950 Census of Agriculture reports.

Data for State economic areas (groups of counties within the State having similar agricultural, demographic, climatic, physiographic, and cultural characteristics) are also given in Volume I for age of operator, residence of operator, years on farm, off-farm work, and other income. These data are shown by size of farm, and for commercial farms, by tenure of operator, by economic class of farm, and by type of farm.

In Volume II, data for all of these items are shown for the United States by size of farm in chapter X, by tenure of operator for commercial farms in chapter XI, by economic class of farm in chapter XII, and by type of farm in chapter XIII. These four chapters also contain data for some of these items for regions, divisions, and States.

DEFINITIONS AND EXPLANATIONS

Definitions having a general application, such as those for "a farm," "farms reporting," and "operators reporting," and factors influencing the reliability of the data are discussed in the Introduction to this volume and will not be considered in this chapter, unless of particular significance in regard to the subject under consideration.

Comparability of data for 1950 and prior censuses affected by changes in definition of a farm.—Some of the differences between the figures for 1950 and those for prior censuses may be the result of the change in the definition of a farm rather than actual changes. (See the Introduction to this volume for a discussion of the effect of the change in the definition of a farm upon the number of farms.) Some places with limited agricultural production which were counted as farms in censuses prior to 1950 were excluded in 1950. The reduction in the number of farms because of the change in the definition of a farm results in an overstatement of the changes from the 1945 or the 1940 Census, in the age of operator and an understatement for the percentage reporting days of work off the farm.

Farm operators.—A "farm operator" is a person who operates a farm either performing the labor himself or directly supervising it. He may be an owner, a hired manager, or a tenant. If he rents land to others or has land cropped for him by others, he is listed as the operator of only the acreage which he retains. In the case of a partnership, the characteristics were tabulated for one member only. The number of farm operators is considered the same as the number of farms.

Age of operator.—Farm operators were classified by age into six groups. The average age of farm operators was calculated by dividing the total of the ages of all operators reporting age by the number of operators reporting.

A distribution of farm operators by age and by color and tenure has been made for each decennial census, beginning with 1910 and for the middecennial Census of 1945. No information on age of operator was obtained in the Censuses of 1925 and 1935. The Census of Population for 1890 and for 1900 included a classification of occupants of farm homes by age groups. Although these data for earlier censuses are on a slightly different basis, the relative age distribution in each tenure class is fairly comparable with those for other censuses.

In 1950, farm operators in the United States were, on the average, 48.3 years of age. This was 0.4 year less than the average age in 1945 when many of the younger men, who otherwise might have been engaged in agriculture, were in the armed services. The proportion of farm operators under 45 years of age increased from 40.1 percent of the total in 1945 to 42.4 percent in 1950. There was very little change in the proportion of farm operators 55 years old and over. Some of the changes in the age distribution of farm operators may be the result of decreases in the number of farms. Because of the change in the definition of a farm, a considerable number of farms on which agricultural production was limited were excluded from the count of farms in 1950. Operators of farms with limited agricultural production are slightly older than operators of farms with greater agricultural production.

Residence of farm operator.—Farm operators were classified by residence on the basis of whether or not they lived on the farm operated. The inquiry in 1950 was, "Do you live on this place? . . . . . ☐ No ☐ Yes." Some of those not living on the farm operated may have been living on other farms. When a farm operator rented land from others, or worked land on shares for others, and had the use of a dwelling as part of the rental arrangement, the enumerator's instructions were to consider the dwelling a part of the farm operated. The dwelling assigned might have been on a tract other than that assigned for crops. Since some operators live on their farms only a portion of the year, comparability of the figures for various censuses may be influenced to some extent by the date of the enumeration.

Operators often live nearby going to their farms day by day. Some operators live in nearby villages and operate their farms from the dwelling in the village. These operators were considered as living on their farms if there were also some agricultural operations carried on at the residence. In Utah, where many farm operators live in villages and operate farms outside the villages, nearly one-fifth (19.4 percent) of the operators of farms were reported as not residing on their farms. Farm activities in some areas are restricted to short, but rather definite periods, especially for such crops as wheat and other small grains. In such cases, the operator may live at a distance from his land, being on his farm only during the planting and harvesting periods.

Data as to residence of the farm operator have been obtained only for three censuses, namely, 1950, 1945, and 1940.

AGE OF FARM OPERATORS—NUMBER OF OPERATORS REPORTING, BY TENURE, FOR THE UNITED STATES: 1910 TO 1950

Table 1 presents data for the residence of farm operators for counties with 150 or more nonresident farm operators, provided these represented 20 percent or more of all operators in the county. These counties have been grouped according to the dominant type or types of farms operated by nonresident operators.

Years on present farm (year began operation of present farm).—The data for years on present farm reflect the stability of operators on particular farms. It should be noted that the number of years does not refer to the total years of farm experience. For a farm operator who moved from another farm, the years on his present farm represent only a part of his experience as a farmer. Likewise, a son who succeeds his father as operator of a particular farm may have had considerable previous farm experience.

Data relating to years on present farm were secured on the basis of the inquiry, "When did you begin to operate this place? ---------- ----------." The data obtained from this inquiry (Month) (Year) are presented under two headings, as follows: (*a*) operators by years on present farm, and (*b*) operators by year began operation of present farm. When the data are presented in terms of the replies to the questionnaire inquiry, the term "year of occupancy" or "month of occupancy" is used. For comparison of the data with those for previous censuses, the data are expressed as "years on present farm." The time of year, or the month in which farmers move, is shown for those operators who began to operate their present farms after May 1949, or within a year of the census date.

Information on years on farm has been obtained for each census beginning with 1910. For 1945, 1940, and 1935, the inquiry called only for the year of occupancy. For 1930 and 1925, as for 1950, the inquiry called for the month as well as the year of occupancy. For the 1920 and 1910 Censuses, the schedule inquiry, instead of asking for the year of occupancy of the farm operator, asked for the number of years and months the operator had operated that particular farm.

According to the 1950 Census, 9.3 percent of the farm operators had occupied their present farms 1 year or less. This percentage ranged from 4.1 percent in Maine to 16.2 percent in Georgia. This group includes all farm operators reporting up to 1 year on present farms preceding the date of the census. Thus, for 1950, the operators reporting year and month of occupancy as April 1949 or later are included. The 1-year-or-less group includes somewhat more than a 1-year period because those operators who reported April 1950 or later as the date they began operating their present farms are also included. For the United States, the number of operators reporting an occupancy date of April 1950 or later was 15,025, or 3.2 percent of those reporting 1 year or less. The 1950 census date, April 1, is an important moving date in several areas. An additional 18,670 operators, who reported 1950 as the year of occupancy, did not specify the month. Enumerators were to be assigned areas that they could enumerate completely in 30 days from the census date. However, in some cases, because of adverse weather, bad roads, and other conditions, a longer period was required for the enumeration. Tending to offset the somewhat longer period than 1 year, caused by the inclusion, in the 1-year-or-less group, of those operators reporting April 1950 or later, were operators who moved sometime between April and December 1949 who reported the year but not the month of occupancy.

For 1945, 1935, and 1925, for which years the census date was January 1, the calendar year preceding the census date provides a 1-year-or-less group reasonably comparable with the 1950 1-year-or-less group. However, January 1 is a more prevalent moving date for farm operators than April 1. For the 1950 Census, 154,123 of the farm operators who began operating their

Table 2.—YEARS ON FARM AS CLASSIFIED FOR EACH CENSUS, WITH THE NUMBER OF OPERATORS IN EACH CLASSIFICATION: 1910 TO 1950

[Each period includes the entire time up to the next period following. Data for 1950 are based on reports for only a sample of farms. See text]

[1] Includes some farm operators moving after the census date. The 1950 Census figure includes 15,025 operators reporting April 1950 or later; the 1945 Census figure includes 238,210 operators reporting 1945. See text.

[2] Based on number of years and months on farm as operator.

farms within a year preceding the census date had moved in January, as compared with 31,126 who had moved in April. Comparability of the 1945 data with those of other years is somewhat affected by the delayed enumeration that year caused by wartime conditions. In 1945, the average date of enumeration was "March 16 to March 31," or 2½ to 3 months after the census date. In 1950, the average date of enumeration was "April 15 to April 28," or approximately 3 weeks after the census date. In 1945, the number of farm operators who reported that they began to operate their farms on the census date or later was 238,210 as compared with 15,025 in 1950. The 1930 figure for operators on present farms 1 year or less, like the 1950 figure, represented those operators reporting a date of occupancy of April 1929 or later.

PERCENT OF FARM OPERATORS ON PRESENT FARMS 1 YEAR OR LESS, BY TENURE: 1910 TO 1950

More than one-third (36.7 percent) of the operators in 1950 had occupied their present farms less than 5 years. In Georgia and Mississippi, where the proportion of tenancy is high (42.8 and 51.6 percent, respectively), nearly one-half (48.0 and 47.6 percent) of the farm operators had operated their present farms less than 5 years. The less-than-5-year group for 1950 includes all operators who reported 1946 or later as the year they began operation of their present farms. Thus, this group covers a period up to 51 months preceding the census date. To represent more accurately a complete 5-year period, it would have been necessary to include, in the 1950 figure, operators who reported any date from April to December 1945 as the date when they began to operate their present farms. However, since most farm operators move during the first 3 months of the year, the omission of those operators moving in the last 9 months of the calendar year is not as serious as it might appear. Of the operators who began operating their farms during the 12-month period preceding the census date in 1950, and who reported the month of occupancy, 54.3 percent moved during January, February, or March.

Farm operators in 1950 who had been on their present farms 5 to 9 years accounted for 20.0 percent of those reporting year of occupancy; those on their present farms 10 to 14 years accounted for 12.6 percent; and those on their present farms 15 years or more accounted for 30.7 percent. The 5-to-9-year group includes those who reported 1941 to 1945, or a period of occupancy of from

Table 3.—Farm Operators on Present Farm 1 Year or Less, by Month of Occupancy, for the United States: 1950

[Data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 25]

Month	Operators reporting	Percent distribution
April 1949 to date of enumeration, total..	471,320	100.0

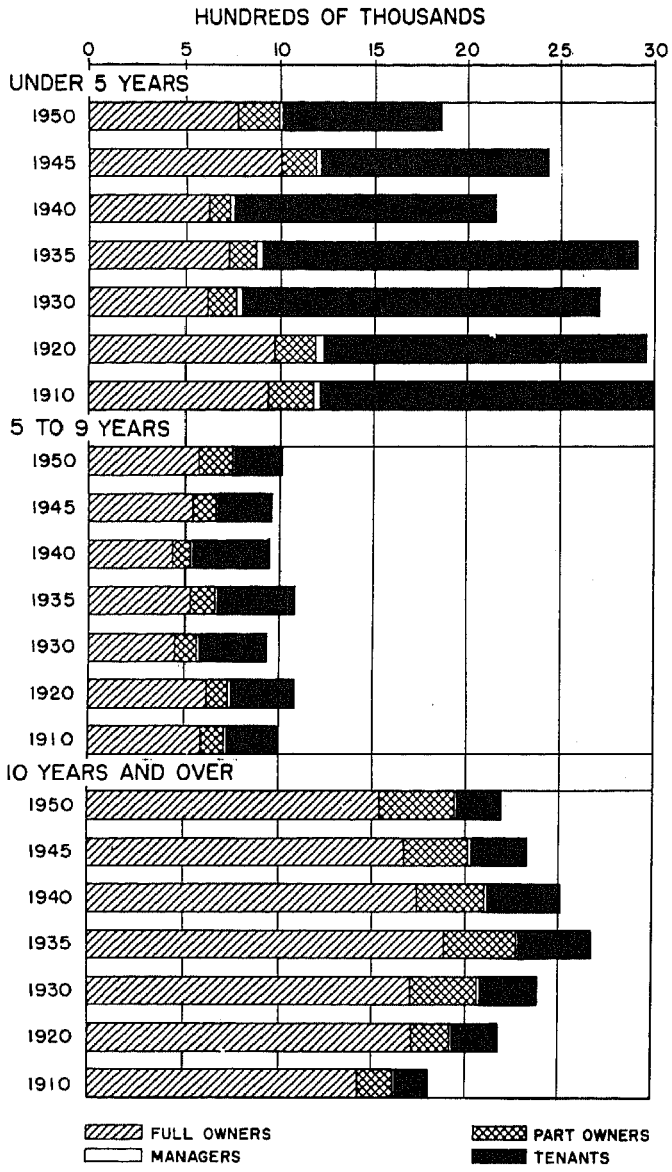
December 1949 to January 1950	201,107	46.0
February 1950, March 1950, April 1949, and May 1949	130,462	29.8

4 years and 3 months up to 9 years and 3 months. The 10-to-14-year group includes those who reported 1936 to 1940, or from 9 years and 3 months up to 14 years and 3 months. The 15-year-or-more group includes those who reported 1935 and earlier, or 14 years and 3 months or over.



For the less-than-5-year, 5-to-9-year, 10-to-14-year, and 15-year-or-more groups, the 1940 and 1930 Census figures are comparable with those for 1950, while those for 1945, 1935, and 1925 represent more accurately the descriptive terms used in the statistical tables to designate these groups.

Differences in length of period or in elapsed time from the census date represented by the various year-on-present-farm groups are shown in table 2. In that table the columns indicate the number of calendar years from the census date. For each census year are shown: (*a*) the year of occupancy represented by each column; (*b*) the exact period included in the classification, expressed as years and months from the census date, as well as an indication of how these periods relate to the calendar years; (*c*) the United States total for each classification; and (*d*) the proportion of all farm operators represented in each classification. The particular column, in which each total is entered, indicates the year-on-farm group in which this particular classification is shown in the tables.

For 1950, the average year of occupancy was 1937 for the United States. This average was calculated by dividing the sum of the years of occupancy by the number of operators reporting. The resulting quotients are shown as whole numbers, all fractions being dropped. For example, if an average was in excess of 1937, but less than 1938, the average year of occupancy is shown as 1937. To obtain the average number of years on present farm, the average year of occupancy was subtracted from the census year. Thus, 1937, the average year of occupancy for farm operators in 1950, represents an average of 13 years on their present farms.

The average year of occupancy and average number of years on present farm were obtained only for the 1950, 1945, and 1940 Censuses. Because of the variation in the census dates, that is, April 1 for 1950 and 1940, and January 1 for 1945, the average number of years on present farm based on a calendar year, is not strictly comparable. For 1950 and 1940, a calculated average of 13 years actually means 12¼ years to 13¼ years on present farm prior to the census date. For 1945, an average of 13 years actually means 13 up to, but not including, 14 years.

YEARS ON FARM—NUMBER OF OPERATORS REPORTING, BY TENURE, FOR THE UNITED STATES: 1910 TO 1950

Off-farm work.—Many farm operators supplement their farm incomes with odd or spare-time jobs. They may work on someone else's farm or they may work at nonfarm jobs. They may operate filling stations, tourist camps, or other businesses at the farm, or they may engage in businesses or professions away from their farms. Their nonfarm employment may be secondary or it may represent their principal employment. An increasing number of farmers are finding part- or full-time employment off their farms. Also, many persons employed in cities are living in rural areas and may have sufficient agricultural activities to qualify their places of residence as farms.

The questionnaire for the 1950 Census of Agriculture carried the following inquiry as to how many days each operator worked off his farm in 1949:

How many days did you work last year off your farm? Include work at a nonfarm job, business, profession, or on someone else's farm . . . (*Check one*)

(Do not include exchange work.)

(1) ☐ None
(2) ☐ 1 to 49 days
(3) ☐ 50 to 99 days
(4) ☐ 100 to 199 days
(5) ☐ 200 days or more

NUMBER OF FARM OPERATORS REPORTING WORK OFF THEIR FARMS BY NUMBER OF DAYS, BY TENURE, FOR THE UNITED STATES: CENSUSES OF 1935 TO 1950

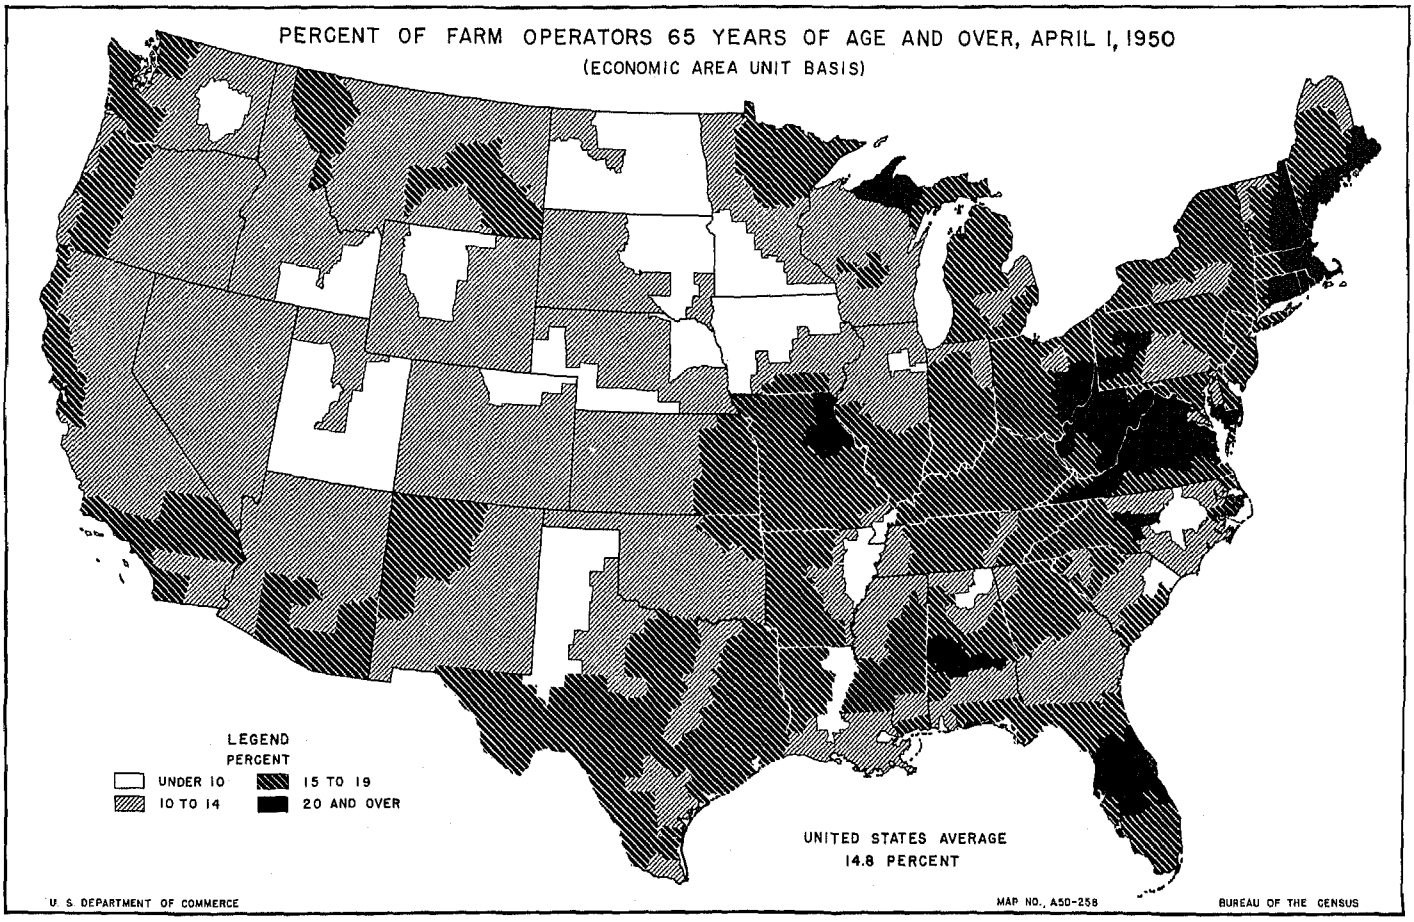
Information on work performed off the farm by farm operators has been obtained for each census beginning with 1930. The wording of the inquiry has varied somewhat for the different censuses. The 1940 schedule, in addition to including an inquiry for the total number of days the operator worked off the farm for pay or income, had two subquestions: (*a*) the number of days spent at farm work not connected with the farm operated, and (*b*) the number of days spent at nonfarm jobs, businesses, or professions. In the 1935 Census, the inquiry specified "work for pay or income not connected with the farm you operate." The 1930 inquiry specified "work for pay at jobs not connected with the farm you operated." In 1945, 1935, and 1930, as in 1950, exchange labor was to be omitted. No reference to exchange labor was made in 1940.

In the 1950, 1940, 1935, and 1930 Censuses, the enumerator was instructed to check the "none" square or write "none" in reply to the inquiry for the number of days worked, if the operator did not work off the farm during the year preceding the census date. In the 1945 Census, no provision was made for recording replies of "none." The replies of "none" were counted for the Censuses of 1950, 1940, and 1935, but not for 1930.

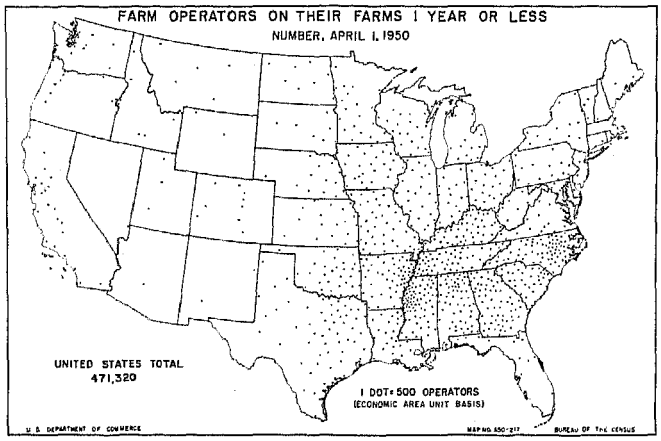
The proportion of farm operators who reported work off their farms was 38.4 percent in 1950, as compared with 26.8 percent in 1945, even though many of the places with limited agricultural production were excluded from the count of farms in 1950.

Other income.—The 1950 Agriculture Questionnaire included four inquiries to determine the extent to which farm operators are dependent upon income from sources other than the farm operated. The first of these called for work off the farm by the operator. (See "Off-farm work," as discussed above.) The other inquiries were substantially as follows:

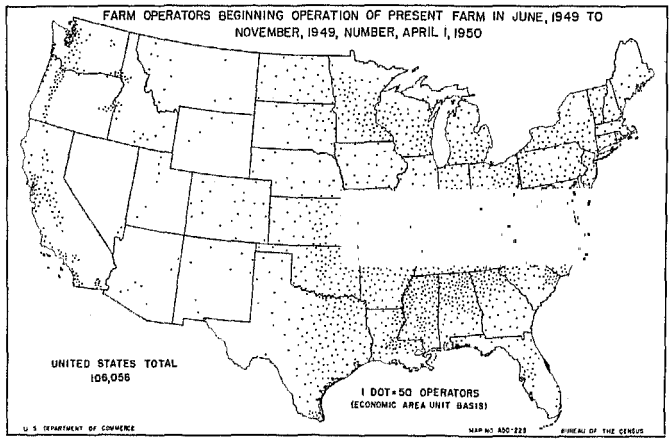
(*a*) Did any other member of your family living with you have a nonfarm job, business, profession, or work on someone else's farm last year? . . . . . ☐ No ☐ Yes



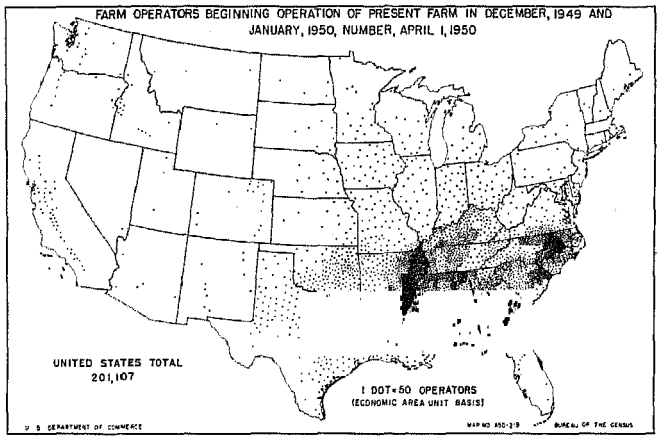
(*b*) Did you have any income last year from any of the following sources—sale of products from land rented out, cash rent, boarders, old age assistance, pensions, veterans' allowances, unemployment compensation, interest, and help from members of your family? . . . ☐ No ☐ Yes



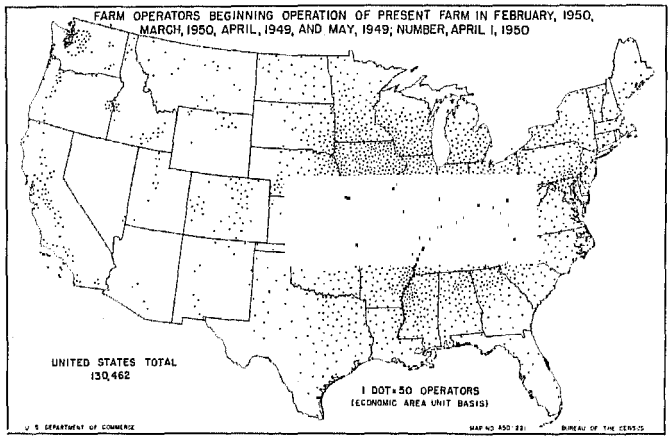
(*c*) Was the income which you and your family received from work off the farm and from other sources (listed in the questions above) greater than the total value of all agricultural products sold from your place last year? . . . . . ☐ No ☐ Yes



No information was tabulated for the two inquiries labeled (*a*) and (*b*). The intent of these inquiries was to obtain a more accurate reply to the inquiry labeled (*c*).



Information on other income of the farm operator's family was not obtained in prior censuses.



For the 1950 Census, 29.1 percent of the farm operators in the United States reported that the income received by the family from sources other than the farm operated exceeded the value of agricultural products sold in 1949. The percentages for the States ranged from 5.6 in North Dakota to 57.3 in West Virginia. For commercial farms, 9.1 percent of the operators reported other income in excess of the total value of farm products sold. For other farms (part-time, residential, and abnormal), the proportion was 73.6 percent.

* Not available. [1] In 1900 the number of occupants of farm homes was 88,364 less than the number of farm operators, while in 1890 the number of occupants of farm homes exceeded the number of farm operators by 202,538. [2] Excludes 40,872 occupants of farm homes with form of tenure not reported. [3] Not shown in the reports of the Census of 1890, as the number not reporting age was distributed among the several age groups. [4] Includes managers. [5] See text.

Table 6.—FARM OPERATORS IN EACH COLOR AND

[All 1950 data and all for 1945 except average age of operators are based on reports for

	Color, tenure, and year	All farm operators	Operators reporting age								Operators not reporting age
			Total	Under 25 years	25 to 34 years	35 to 44 years	45 to 54 years	55 to 64 years	65 years and over	Average age	
1	Total 1950	2,650,803	2,451,507	98,339	388,951	586,020	546,905	455,991	375,301	48.0	199,296

*Not available.

[1] In 1900 the number of occupants of farm homes was 38,688 less than the number of farm operators, while in 1890 the number of occupants of farm homes exceeded the number of farm operators by 122,156.

[2] Excludes 40,872 occupants of farm homes with form of tenure not reported.

[3] Excludes those occupants of farm homes with form of tenure not reported.

[4] Includes managers.

TENURE, BY AGE, FOR THE SOUTH: 1890 TO 1950—Continued

only a sample of farms. See text. Figures for divisions and States in tables 18 and 19]

Percent distribution of operators reporting in each tenure, by age						Percent distribution of operators in each group, by tenure								
							Reporting age							
Under 25 years	25 to 34 years	35 to 44 years	45 to 54 years	55 to 64 years	65 years and over	All operators	Total	Under 25 years	25 to 34 years	35 to 44 years	45 to 54 years	55 to 64 years	65 years and over	Not reporting age

Table 11.—FARM OPERATORS IN EACH TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE UNITED STATES: 1910 TO 1950

[Years-on-farm groups not strictly comparable for the several censuses because of variation in census dates. See table 2 for explanation of the time intervals represented. All 1950 and 1945 data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 23]

Tenure and year	All farm operators	Operators reporting years on present farm					Average number of years on present farm	Operators not reporting years on present farm	Percent distribution of operators reporting in each tenure, by years on present farm				Percent distribution of operators in each years-on-farm group, by tenure

[1]Includes standing renters for northern and western States.
[2]See text.

Table 12.—FARM OPERATORS IN EACH COLOR AND TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE SOUTH: 1910 TO 1950

[Years-on-farm groups not strictly comparable for the several censuses because of variation in census dates. See table 2 for explanation of the time intervals represented. All 1950 and 1945 data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 23]

Color, tenure, and year	All farm operators	Operators reporting years on present farm					Average number of years on present farm	Operators not reporting years on present farm	Percent distribution of operators reporting in each tenure, by years on present farm				Percent distribution of operators in each years-on-farm group, by tenure			
		Total	Less than 5 years		5 to 9 years	10 years or more			Less than 5 years		5 to 9 years	10 years or more	Less than 5 years		5 to 9 years	10 years or more

Table 12.—FARM OPERATORS IN EACH COLOR AND TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE SOUTH: 1910 TO 1950—Continued

[Years-on-farm groups not strictly comparable for the several censuses because of variation in census dates. See table 2 for explanation of the time intervals represented. All 1950 and 1945 data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 23]

Color, tenure, and year	All farm operators	Operators reporting years on present farm						Operators not reporting years on present farm	Percent distribution of operators reporting in each tenure, by years on present farm				Percent distribution of operators in each year-on-farm group, by tenure			
		Total	Less than 5 years		5 to 9 years	10 years or more	Average number of years on present farm		Less than 5 years		5 to 9 years	10 years or more	Less than 5 years		5 to 9 years	10 years or more
			Total	1 year or less					Total	1 year or less			Total	1 year or less

Table 12.—FARM OPERATORS IN EACH COLOR AND TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE SOUTH: 1910 TO 1950—Continued

[Years-on-farm groups not strictly comparable for the several censuses because of variation in census dates. See table 2 for explanation of the time intervals represented. All 1950 and 1945 data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 23]

Color, tenure, and year	All farm operators	Operators reporting years on present farm					Average number of years on present farm	Operators not reporting years on present farm	Percent distribution of operators reporting in each tenure, by years on present farm				Percent distribution of operators in each year-on-farm group, by tenure			
		Total	Less than 5 years		5 to 9 years	10 years or more			Less than 5 years		5 to 9 years	10 years or more	Less than 5 years		5 to 9 years	10 years or more

Table 13.—OPERATORS OF COMMERCIAL AND OTHER FARMS IN EACH TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE UNITED STATES, THE NORTH, AND THE WEST, AND IN EACH COLOR AND TENURE FOR THE SOUTH: 1950

[Data are based on reports for only a sample of farms. See text]

Region, tenure, and economic class	All farm operators	Operators reporting years on present farm					Operators not reporting years on present farm	Percent distribution of operators reporting in each tenure, by years on present farm				Percent distribution of operators in each years-on-farm group, by tenure			
		Total	Less than 5 years		5 to 9 years	10 years or more	Average number of years on present farm		Less than 5 years		5 to 9 years	10 years or more	Less than 5 years		5 to 9 years	10 years or more
			Total	1 year or less					Total	1 year or less			Total	1 year or less

Table 13.—OPERATORS OF COMMERCIAL AND OTHER FARMS IN EACH TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE UNITED STATES, THE NORTH, AND THE WEST, AND IN EACH COLOR AND TENURE FOR THE SOUTH: 1950—Continued

[Data are based on reports for only a sample of farms. See text]

Region, tenure, and economic class	All farm operators	Operators reporting years on present farm						Operators not reporting years on present farm	Percent distribution of operators reporting in each tenure, by years on present farm				Percent distribution of operators in each years-on-farm group, by tenure			
		Total	Less than 5 years		5 to 9 years	10 years or more	Average number of years on present farm		Less than 5 years		5 to 9 years	10 years or more	Less than 5 years		5 to 9 years	10 years or more
			Total	1 year or less					Total	1 year or less			Total	1 year or less

TABLES FOR THE UNITED STATES

Table—

Page

1.—Farms reporting telephone and electricity, for the United States: 1920 to 1950 198
2.—Farms reporting electricity and specified electric facilities, 1950; and farms reporting specified facilities, 1945; for the United States 198
3.—Farms by distance to trading center and by kind of road, for the United States: 1925 to 1950 200
4.—Specified farm equipment, for the United States: 1920 to 1950 204
5.—Motortrucks, tractors, and automobiles, by age of newest model, for the United States: 1950, 1945, and 1940 205
6.—Motortrucks, tractors, and automobiles, by year of newest model, for the United States: 1950, 1945, and 1940 206

TABLES FOR GEOGRAPHIC REGIONS, DIVISIONS, AND STATES

Table—

Page

7.—Specified farm facilities, by divisions and States: 1920 to 1950 211
8.—Farms by amount of last monthly electric bill, by divisions and States: Census of 1950 214
9.—Farms reporting kind of road on which farm is located, by divisions and States: 1950, 1940, and 1930 215
10.—Distance to trading center, 1950 and 1925; distance over dirt or unimproved roads, 1950; and distance to nearest all-weather road, 1945: by divisions and States 217
11.—Specified farm equipment, by divisions and States: 1950 and 1945 221
12.—Motortrucks on farms, by divisions and States: 1920 to 1950 223
13.—Percent distribution of farms reporting motortrucks, by age of newest motortruck, by divisions and States: 1950, 1945, and 1940 224
14.—Percent distribution of farms reporting motortrucks, by year of newest model, by divisions and States: Census of 1950 225
15.—Tractors on farms, 1920 to 1950; and farms by class of work power, 1950: by divisions and States 226
16.—Tractors on farms by kind and farms by number of tractors; by divisions and States: 1950 and 1945 228
17.—Percent distribution of farms reporting wheel tractors other than garden, by age of newest tractor, by divisions and States: 1950, 1945, and 1940 230
18.—Percent distribution of farms reporting wheel tractors other than garden, by year of newest model, by divisions and States: Census of 1950 231
19.—Automobiles on farms, by divisions and States: 1920 to 1950 232
20.—Percent distribution of farms reporting automobiles, by age of newest automobile, by divisions and States: 1950, 1945, and 1940 233
21.—Percent distribution of farms reporting automobiles, by year of newest model, by divisions and States: Census of 1950 234

CHAPTER III.—FARM FACILITIES, ROADS, TRADING CENTER, FARM EQUIPMENT

Introduction.—The statistics presented in this chapter provide some relative measures of the well-being of farm-operator households and of the mechanization of farms. The data relate to specified facilities in the farm home, kind of road on which the farm is located, distance to the trading center visited most frequently, and specified items of farm equipment and machinery. The data on facilities include telephone, electricity, and some items of electrical equipment used in the home as well as in the farm business. The electric facilities and equipment include electric water pumps, electric hot-water heaters, home freezers, electric washing machines, electric chick brooders, and electric power feed grinders. The farm equipment and machinery include milking machines, grain combines, corn pickers, pick-up hay balers, silos (upright and pit or trench), motortrucks, tractors (wheel other than garden; garden; and crawler), and automobiles. The age or year of newest model is presented for motortrucks, wheel tractors (other than garden), and for automobiles. The year of newest model for crawler tractors, although obtained, was not tabulated.

Sources of data.—The data presented are from the 1950 Census of Agriculture, with comparative data from earlier censuses. The 1950 data and a portion of the 1945 data for all the items included in this chapter were enumerated for only a sample of farms. When data are based on the reports for only a sample of farms, the table carries a headnote to that effect. When only a part of the data for a given year is based on the sample, the sample information is shown in italics. For a description of the procedures used in the enumeration and in the processing of the statistics, for a description of the sampling technique, and for a tabular presentation giving the reliability of estimates based on the sample, see the Introduction to this volume.

Presentation of the statistics.—The statistics are presented as totals for the continental United States, for three major regions, for nine geographic divisions, and for each of the 48 States and the District of Columbia. An outline map showing the States and the geographic divisions and regions for which totals are shown appears in the Introduction.

Comparable data from earlier censuses provide a measure of the changes that have occurred from census to census. Most of the available comparative data are shown for the United States. Historical data for regions, divisions, and States are shown only for selected census years. In presenting statistics for earlier census years, headnotes, footnotes, or the wording of the stub or column headings indicates any significant lack of comparability which may have resulted from changes in the wording of the inquiries, in the instructions or definitions, or in the procedures followed in collecting and compiling the data. The text discussion for the various items gives further information in regard to the comparability of the data. The tabular presentation is supplemented by graphic presentation through the use of maps and charts.

Other published data.—Data on farm facilities, roads, trading center, and farm equipment are greatly affected by changes in the number of farms. Data on number of farms are presented in chapter I of this volume. Changes in number of farms due to differences in definition are discussed in the Introduction to this volume.

Data by counties on farm facilities, roads, trading center, and farm equipment may be found in Volume I, chapter B, parts 1 to 33, of the 1950 Census of Agriculture reports.

Data for State economic areas (groups of counties within a State having similar agricultural, demographic, climatic, physiographic, and cultural characteristics) may be found in Volume I, chapter C.

Data on farm facilities and farm equipment, classified by size of farm, appear in chapter X of this volume; by tenure of operator in chapter XI; by economic class of farm in chapter XII; and by type of farm in chapter XIII. Data for these items are also presented in Volume I by these classifications for State economic areas. Totals are also shown in Volume I by counties for "commercial" and "other" farms (part-time, residential, and abnormal). (See the Introduction to Volume II for availability of data for various classifications and for various geographic levels.)

Prior censuses of agriculture included data for some facility and equipment items not included in the 1950 Census of Agriculture. (See the following paragraph.) For data for these earlier censuses for items not included in this chapter, see the reports for those census years. In 1945, data for some facilities and equipment items were obtained only for a sample of the farms enumerated, and appear in a special report entitled, "1945 Sample Census of Agriculture." Data on housing facilities collected in the 1950 Census of Population and Housing are shown for rural farm dwelling units in series H–A or in Volume I of the 1950 Census of Housing reports.

History of Census inquiries on farm facilities, roads, trading center, and farm equipment.—In this chapter, data on farm facilities, roads, trading center, and farm equipment for earlier censuses are shown only for items included in the 1950 Census of Agriculture or for items closely related to those for 1950.

Information on farm facilities was first secured in the census of agriculture in the 1920 Census. Information was obtained in 1920 for running water, gas or electricity, and telephones; in 1940, for electricity and telephones; and in 1945, for running water, electricity, radio, telephone, kitchen sink with drain, mechanical refrigeration, and power-driven washing machine.

Information on roads in relation to farms has been obtained at each census beginning with 1925, with the exception of 1935. The inquiries in 1925, 1930, and 1940 referred to the kind of surface for the road adjoining the farm; and the inquiry for 1945, to the distance to the nearest all-weather road. Information on distance to trading center was previously obtained only in 1925.

Information for tractors, motortrucks, and automobiles on farms was first obtained in the 1920 Census of Agriculture. In 1925, information was obtained for tractors only. In 1935, no information was secured for any of these items. Information as to year of newest model or age was first obtained in 1940. Information as to kind of tractor—that is, wheel, other than garden, and crawler—was first obtained in 1945. An inquiry on combines was first carried in the 1930 Census. As many types or combina-

tions of equipment were reported instead of the type desired, the results were considered too unsatisfactory for publication. The first data published for this item are from the 1945 Census. Data on milking machines were likewise available for the first time in the 1945 Census. An inquiry on the number of silos was included on the schedule for 1890, but no data for this item were presented in the 1890 reports. In 1930 and in 1945, data were obtained for the numbers of electric motors and stationary gas engines.

DEFINITIONS AND EXPLANATIONS

The descriptive terms and explanations refer principally to the 1950 Census of Agriculture. In general, they are applicable to earlier censuses. The definitions consist primarily of a résumé of the questionnaire wording, occasionally supplemented by the more essential parts of instructions and procedures for enumerating and processing the questionnaires. For the exact phrasing of the inquiries, reference should be made to the facsimile of the 1950 Agriculture Questionnaire shown in the Appendix.

Definitions having a general application, such as those for "farms reporting" and "operators reporting," and factors influencing the reliability of the data are discussed in the Introduction to this volume and will not be considered in this chapter, unless of particular significance in respect to the subject under consideration.

A farm.—For the 1950 Census of Agriculture, places of 3 or more acres were counted as farms if the value of agricultural products in 1949, exclusive of home gardens, amounted to $150 or more. The agricultural products could have been either for home use or for sale. Places of less than 3 acres were counted as farms only if the value of sales of agricultural products in 1949 amounted to $150 or more. From 1925 to 1945, farms for census purposes included places of 3 or more acres on which there were agricultural operations and places of less than 3 acres with agricultural products for home use or for sale valued at $250 or more. The definition for 1920 was similar to that used from 1925 to 1945 but was somewhat more inclusive.

The more restrictive definition used in 1950 had an appreciable effect on the statistics for farm facilities, roads, trading center, and farm equipment. This more limited definition excluded from the count of farms many residential and other places with little agricultural production, many of which were in the proximity of cities. See the Introduction for discussion of the effect of the change of definition on the number of farms.

Specified facilities.—The 1950 Agriculture Questionnaire contained inquiries regarding telephones, electricity, and specified electric facilities and equipment, namely, electric water pump, electric hot-water heater, home freezer, electric washing machine, electric chick brooder, and electric power feed grinder.

Telephone.—In 1950, the inquiry was worded, "Is there a telephone on this place?" In 1945, the inquiry read, "Does farm dwelling have telephone?" In 1940, 1930, and 1920, the inquiry for telephones merely specified "on farm." The more restricted definition in 1945 may have resulted in the omission of some farms from the count of those with telephones. This could have been true if (*a*) the telephone was in a dwelling on the farm which was occupied by someone other than the operator, or (*b*) if the telephone was in a nondwelling structure on the farm. In 1945, of 463,526 farms with 2 or more dwellings, 227,270 reported resident operators and no telephone. There were 229,521 farms with no occupied dwellings.

Electricity.—In 1950, the inquiry on electricity, similar to that for telephone, specified "on this place." Provision was made on the questionnaire for indicating whether the electricity was from a power line or from a home plant. If the electricity was from a power line, the respondent was asked for the amount of his last monthly electric bill. Farms reporting electricity were classified into those with electricity from a power line and those with electricity from a home electric plant. Farms with electricity from both a power line and a home plant are included in the count of farms with electricity from a power line. A count of the farms reporting electricity from both a power line and a home plant provides data on farms having "stand-by" electric plants. The count of farms reporting electricity from a home plant, and not from a power line, is shown in this chapter as farms with electricity from a "home plant only." In Volume I, the figures shown for farms reporting electricity from a home plant exclude those farms reporting electricity from both a power line and a home plant. These figures are the same as the count of farms shown in this chapter as "farms reporting electricity from a home plant only."

In 1945, 1940, and 1930, the inquiry on electricity was less inclusive than the inquiry in 1950. In 1945 and 1940, the inquiry referred to the "farm dwelling"; and in 1930 to the "farmer's dwelling house." In these earlier years, some farms with electricity in a second or third dwelling and farms with electricity used only for purposes other than in the farm households may have been omitted because of this difference in the wording of the inquiry. In 1920, the inquiry was for "gas or electric light in operator's house."

In 1945, there was no inquiry regarding the source of electricity. The number of farms with electricity that were within ¼ mile of an electric distribution line was considered as the number of farms with electricity from a power line. In 1940, there were only 39,069 farms within ¼ mile of an electric distribution line which reported electricity from a home plant. For 1945, the difference between farms reporting electricity and those with electricity that were within ¼ mile of an electric distribution line represents an understatement of the farms with home electric plants. Farms within ¼ mile of an electric distribution line which had electricity from a home plant would not be considered in this count. In 1940, such farms accounted for 21.8 percent of the total farms reporting home electric plants. In 1930, farms reporting expenditures for purchase of electric light and power (paid to a power company) provide a minimum figure for farms with electricity from a power line. The difference between farms reporting electricity and those reporting expenditures for electricity would probably represent an overstatement of farms with home electric plants, because of incompleteness in the reporting of expenditures.

Electric facilities and equipment.—In 1950, the inquiry for electric facilities was: "Do you have ——?", followed by names of specified electric facilities and equipment. The questionnaire provided for obtaining only a count of farms for these items. The items included electric water pump, electric hot-water heater, home freezer, electric washing machine, electric chick brooder and electric power feed grinder. The instructions were to include any electric water pump on the place whether used for the home, for irrigation, for watering livestock, or other purposes. Enumerators were instructed to report as electric hot-water heaters only electric heaters with hot-water storage tank. Portable electric devices used for heating water by placing them in the water or attaching them to faucets, and heating devices used to keep the water for livestock from freezing were not to be included. Likewise, water heaters using fuel other than electricity and controlled with electric thermostats were not to be included.

No data for electric facilities or equipment were obtained in any census of agriculture prior to 1950. The most nearly comparable data are those for farms with both electricity and running water, mechanical refrigeration, and power-driven washing machines obtained in the 1945 Census.

Kind of road.—The 1950 Agriculture Questionnaire provided for reporting one of three classes of road on which the farm was located. If the farm was located on more than one kind of road, the enu-

merator was instructed to indicate the kind of road on which the most frequently used entrance was located. Hard-surface roads were to include concrete, brick, asphalt, and oil-bound or water-bound macadam. Roads of caliche, chat, chert, cinder, clay-gravel, sand-clay-gravel, crushed rock, iron ore, schist, scoria, slag, limestone, and the like, were to be reported as gravel, shell, or shale roads.

Trading center.—Two inquiries on trading center were carried in the 1950 Census. One asked for the distance to the trading center visited most frequently; the other, how much of this distance was over dirt or unimproved roads. In classifying the farms by distance to trading center over dirt or unimproved roads, farms reporting "none" were grouped with those reporting 0.1 and 0.2 of a mile. Some of the reports of only 0.1 or 0.2 of a mile may have represented the distance from the farm buildings to the highway. In some cases, a farm operator who reported travel over a dirt or unimproved road to the trading center visited most frequently reported, in answer to the inquiry as to kind of road on which the farm is located, that his farm was located on a higher class of road (hard surface, or gravel, shell, or shale). This situation may have been due to (*a*) the reporting of distance traveled over a dirt or unimproved road within the farm boundaries to reach the road adjoining the farm, (*b*) reporting travel over dirt or unimproved road after leaving the road adjoining the farm, or (*c*) reporting travel over a gravel, shell, or shale road as distance over a dirt or unimproved road.

In 1925, the only previous year for which data relating to trading center were obtained, the inquiry was for "distance to nearest market town." In 1945, the inquiry on roads asked for the "distance to nearest all-weather road." These data are not strictly comparable with those for 1950 for distance to trading center visited most frequently and distance over dirt or unimproved roads. The distance to nearest all-weather road may not have been in the direction traveled to trading center visited most frequently. Also, some dirt or unimproved roads may have been considered "all-weather" roads.

Farm equipment.—Data were obtained in the 1950 Census for milking machines, grain combines, corn pickers, pick-up hay balers, silos, and motortrucks, tractors, and automobiles. The inquiry on milking machine determined only whether there was a milking machine on the farm but not the number of units. The number of units was obtained for most other items of farm equipment. Separate data were obtained for upright silos and pit or trench silos. No instructions were given for reporting temporary silos or stack silage. Separate counts were also made for wheel tractors (other than garden tractors), garden tractors, and crawler tractors. Wheel tractors were to include home-made tractors but were not to include implements with built-in power units, such as self-propelled combines, powered buck rakes, etc. Garden tractors were not defined.

In reporting motortrucks and automobiles, "pick-ups" and "truck-trailer" combinations were to be reported as trucks. School buses were not to be included. Jeeps and station wagons were to be included as motortrucks or as passenger vehicles depending on whether they were used for hauling or as passenger vehicles.

Year of newest model and age of motortrucks, tractors, and automobiles.—For farms with motortrucks, tractors (except garden), and automobiles, data were also secured for the year of newest model. For tractors, data on the year of newest model are limited to wheel tractors (tractors other than garden or crawler) for the Censuses of 1950 and 1945, but refer to all tractors for the Census of 1940. (In 1950, the year of newest model for crawler tractors was obtained but was not tabulated.) The inquiry for year of newest model called for reporting "HM" for home-made tractors in lieu of the year of newest model in both 1950 and 1945. The count of home-made tractors represents a minimum figure for home-made tractors since a home-made tractor representing a second, third, etc., tractor on the farm would not be included. For farms with two or more motortrucks, wheel tractors, or automobiles, year of newest model was not obtained for the second, third, etc., units.

The age of newest model was obtained by subtracting the year of newest model from the census year. For 1950 and 1940, the average year of newest model and the average age were obtained by dividing the summation of the year of model reported by the number of farms reporting. The result was shown as a whole number, all fractions being dropped. For example, if the average was in excess of 1943, but less than 1944, the average was shown as 1943. For 1945, the average year of model was calculated from an estimate of the total years obtained (*a*) by multiplying the farms reporting each year of model 1931 to 1945 by the year of model and (*b*) by multiplying the number of farms reporting for 1930 and earlier models by the average year of model for those years as calculated from the data shown in the 1940 Census reports.

The median year of newest model and the median age were obtained by determining the central item when the farms reporting were arrayed by year of newest model. If the median fell within a group representing more than a single year of model, the farms were assumed to be distributed by individual years of model in the same proportions as the farms reporting these years of model in the 1945 Census.

In this chapter, the distribution of farms by year of newest model and by age of newest motortruck, tractor, and automobile is shown for regions, divisions, and States only as percentages. The numbers of farms in each group are shown for the several States in Volume I.

The data for year of newest model presented for the 1950, 1945, and 1940 Censuses provide some information as to the life of farm motortrucks, tractors, and automobiles. When using the data for this purpose, consideration must be given to (*a*) the second, third, etc., units on farms; (*b*) changes in number of farms; (*c*) memory bias in reporting the year of newest model, particularly for tractors after a lapse of a few years from date of purchase; and (*d*) the purchase of used units from nonfarm sources, especially in the case of motortrucks and automobiles. No information was obtained as to the year of model of second, third, etc., units. In the 10-year period, 1940 to 1950, the proportion of the totals represented by the second, third, etc., units has increased from 9.8 percent to 16.6 percent for motortrucks, from 10.1 to 30.0 for tractors, and from 14.5 to 19.3 for automobiles. Many of the units for which year of newest model was reported in one census had become a second, third, etc., unit by the following census. From 1945 to 1950 the number of farms reporting two or more tractors more than doubled.

Farms by class of work power.—Farms were classified on the basis of the presence or absence of horses, mules, and tractors, as follows: (*a*) farms with no tractor, horse, or mule; (*b*) farms with no tractor and only 1 horse or mule; (*c*) farms with no tractor and 2 or more horses and/or mules; (*d*) farms with tractor and horses and/or mules; and (*e*) farms with tractor and no horses or mules.

All horses and mules, regardless of age and purpose for which kept, were considered in determining the work-power classes. Likewise, tractors of all kinds, varying from small garden tractors to large crawler types, were considered in determining work-power classes.

Many farms have no need of work power. Some of these farms represent rural homes with very limited agricultural production. Others include many poultry farms, dairy farms, livestock ranches, greenhouses, and the like, with little or no cropland. For some farms, all the work power may be hired from others, and for some, all the work power may be furnished by the landlord. Work

power was to be reported on the farm where kept regardless of ownership.

Some farms classified as having work power may have horses or mules kept only for nonfarm work, or for purposes other than for work power; some may have only small garden tractors which may or may not be used for farm work. Farms hiring out, or furnishing, work power to others may show more work power available than is needed for their operations, while those hiring all or part of their work power from others and those having it furnished may show an insufficient amount of work power for their operations.

CHANGES IN FARM FACILITIES, ROADS, AND FARM EQUIPMENT

Decreases between 1945 and 1950 for any State or geographic area in the number of farms with telephones, electricity, automobiles, motortrucks, or other items, and decreases between 1940 and 1950 in the number of farms located on the better roads are associated with losses in numbers of total farms. Much of the loss in number of farms was due to (*a*) changes in the definition of a farm for purposes of the agriculture census and (*b*) to the abandonment or curtailment of agricultural activities on places now occupied primarily as rural homes by persons employed at nonfarm jobs or dependent primarily on nonfarm incomes. (See the Introduction to this volume for a more complete discussion of the change in number of farms.)

Although the number of farms reporting telephones, for the country as a whole, increased from 1945 to 1950 by 10.3 percent, decreases occurred in 9 States. In all the States showing a decrease in farms reporting telephones, the decline in the total number of farms was greater. All States showed a higher proportion of farms with telephones in 1950 than in 1945, the percentages for the United States being 38.2 for 1950 and 31.8 for 1945. However, the proportion of farms reporting telephones was slightly less in 1950 than in 1920 when 38.7 percent of the farms reported telephones. 21 States showed smaller proportions of farms reporting telephones in 1950 than in 1920. All but one of these States—Oregon—were North Central or Southern States. Some of the decreases for the period 1920 to 1950 may be due to increased dependence on the radio and automobile. In some communities the disappearance or curtailment of the service of local telephone companies contributed to the decline following 1920.

Farms with electric service continued to increase between 1945 and 1950 with numerical decreases occurring only in the New England States in New York New Jersey. Arizona, and Washington. In these States decreases accompanied the losses in number of total farms. The largest increases occurred in the South, with more than twice as many farms having electricity in 1950 than in 1945. In that region, 70.5 percent of the farms now have electricity as compared with 78.3 percent for the United States as a whole. In 1945, only 47.6 percent of the farms in the United States reported electricity.

Table 1.—FARMS REPORTING TELEPHONE AND ELECTRICITY, FOR THE UNITED STATES: 1920 TO 1950

[All 1950 data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 7]

Year	Farms reporting telephone [1]				Farms reporting electricity [2]											All farms (number)

Last monthly bill not reported—farms	593,319	11.0	xxx	Mechanical refrigeration—farms reporting	1,737,643	29.7	xxx
				Power-driven washing machine—farms reporting	2,512,155	42.9	xxx

[1] Less than 0.05 percent.

PERCENT OF FARMS REPORTING ELECTRICITY AND TELEPHONES, FOR THE UNITED STATES AND REGIONS: 1920 TO 1950

PERCENT OF FARMS WITH ELECTRICITY, REPORTING SPECIFIED ELECTRIC FACILITIES, FOR THE UNITED STATES AND REGIONS: 1950

The improvement of highways in rural areas has continued, as indicated by 32.1 percent of the farms on a hard-surface road and 19.6 percent in 1940. Also, 32.7 percent of the farms reporting in 1950 were on a dirt or other unimproved road as compared with 50.8 percent in 1940 In 1950, of the farms reporting distance traveled over dirt or unimproved roads to the trading center visited most frequently, 48.5 percent reported 0.3 mile or more of travel over dirt or unimproved roads. In 1945, of the farms reporting distance to nearest all-weather road, only 32.3 percent reported 0.3 mile or more to the nearest all-weather road. Some of the distance reported in 1950 as over dirt or unimproved roads may have been over roads which in reality were gravel, shell, or shale. (See further discussion under "Trading center.")

The number of farms in the United States reporting motortrucks increased 41.6 percent from 1945 to 1950. For this same period, there was a greater increase, 48.1 percent, in the number of motortrucks on farms. The largest increases were in the South. The proportion of farms with automobiles increased very little from 1945 to 1950, with 63.0 percent of the farms reporting automobiles in 1950 as compared with 62.0 in 1945.

For the United States as a whole, 46.9 percent of the farms in 1950 reported tractors as compared with 34.2 percent in 1945. The number of tractors increased by 49.0 percent from 1945 to 1950, with more than one-third the total increase in the South. In that region, the proportion of farms with tractors increased from 14.3 percent to 26.1 percent, while the number of tractors nearly doubled. The number of tractors per farm for the country as a whole increased from 1.2 to 1.4 from 1945 to 1950, with more than twice as many farms reporting 2 tractors and nearly 3 times as many farms reporting 3 or more tractors in 1950 as in 1945.

Increased mechanization of farms is also shown by increases between 1945 and 1950 of 74.3 percent in the number of farms reporting a milking machine and 90.3 percent in the number of farms reporting grain combines. In the North Central States, where the farms are highly mechanized, 70.7 percent of the farms reported tractors, as compared with 26.1 percent in the South, where greater dependence is placed on hand labor.

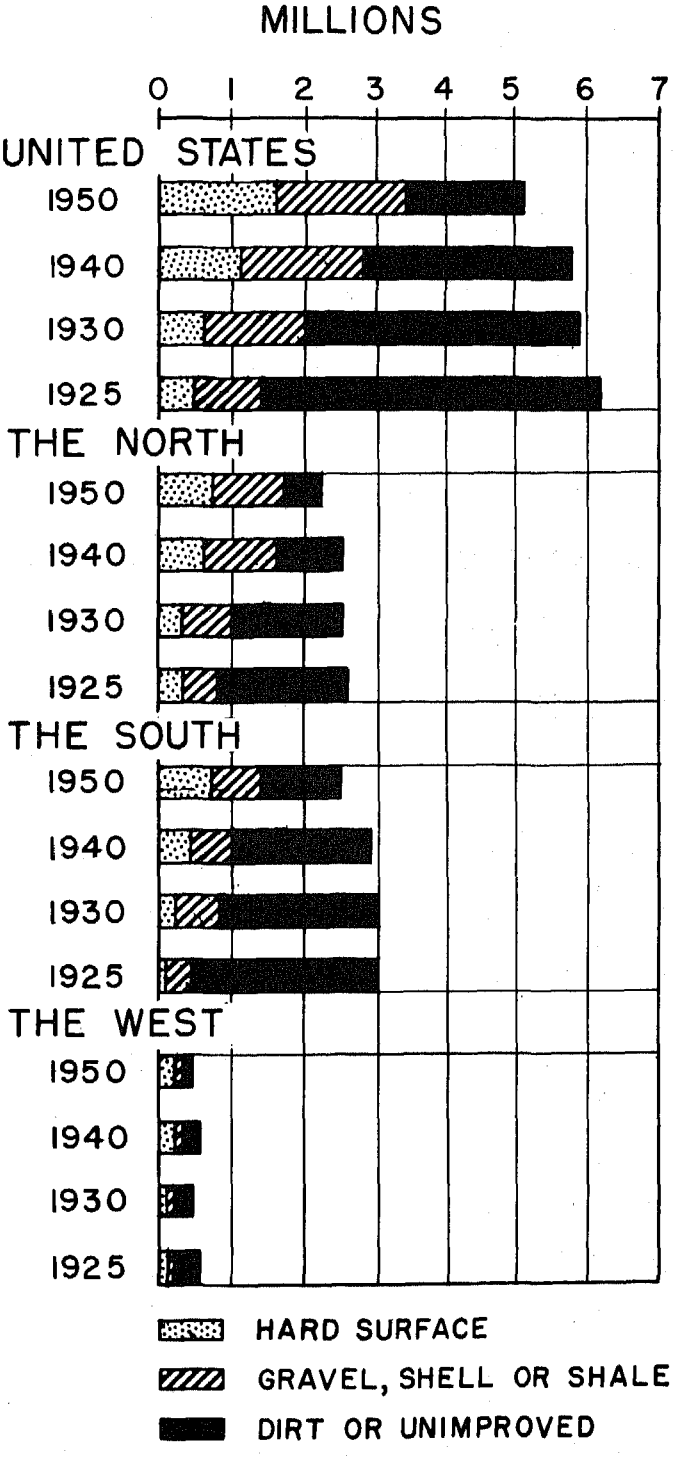

Table 3.—FARMS BY DISTANCE TO TRADING CENTER AND BY KIND OF ROAD, FOR THE UNITED STATES: 1925 TO 1950

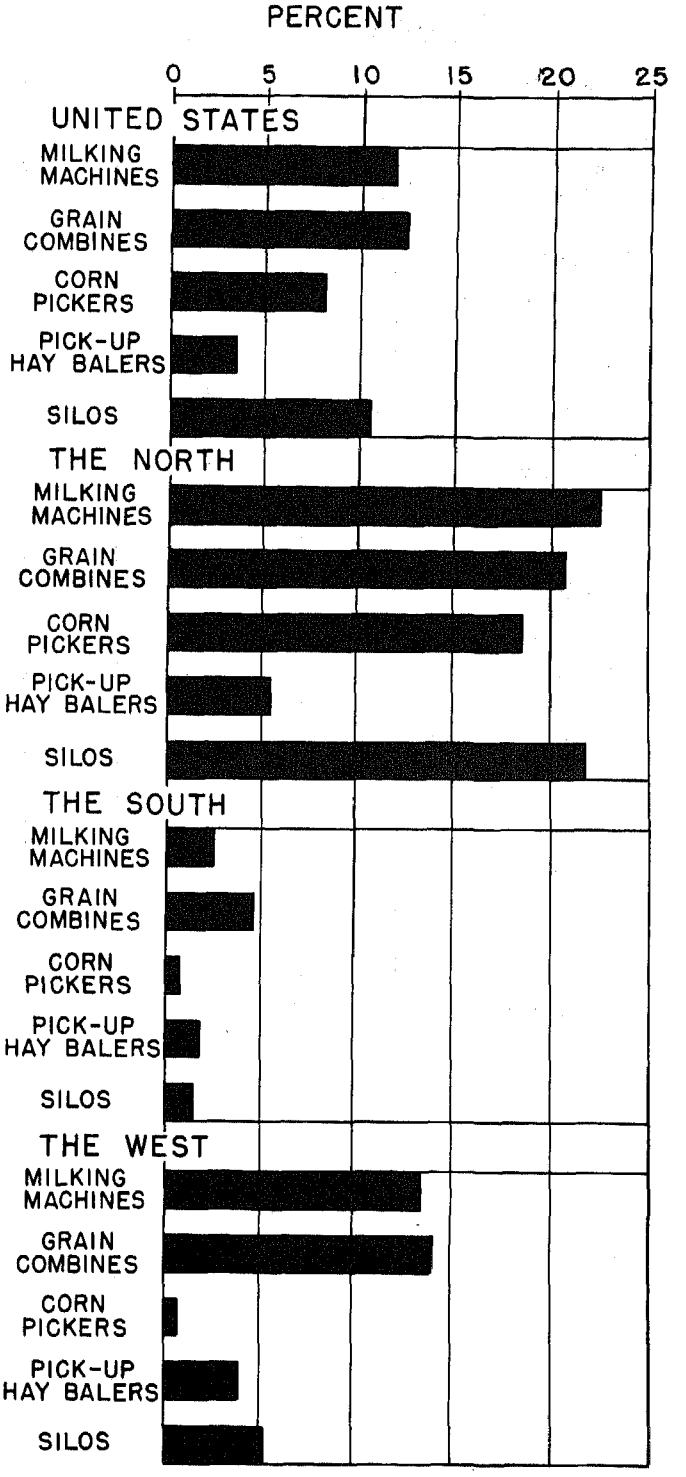
[All 1950 data are based on reports for only a sample of farms. See text. Figures for divisions and States in tables 9 and 10]



Item and year	Number	Percent of all farms	Percent of total
Distance to trading center visited most frequently, 1950—farms reporting	5,221,385	97.1	100.0
Under 1 mile—farms reporting	391,234	xxx	7.5
1 to 4 miles—farms reporting	2,074,939	xxx	39.7
5 to 9 miles—farms reporting	1,640,239	xxx	31.4
10 miles and over—farms reporting	1,114,973	xxx	21.4
Average distance reported—miles	6	xxx	xxx
Distance not reported—farms	157,865	2.9	xxx
Distance from nearest market town, 1925 farms reporting	6,279,368	98.6	100.0

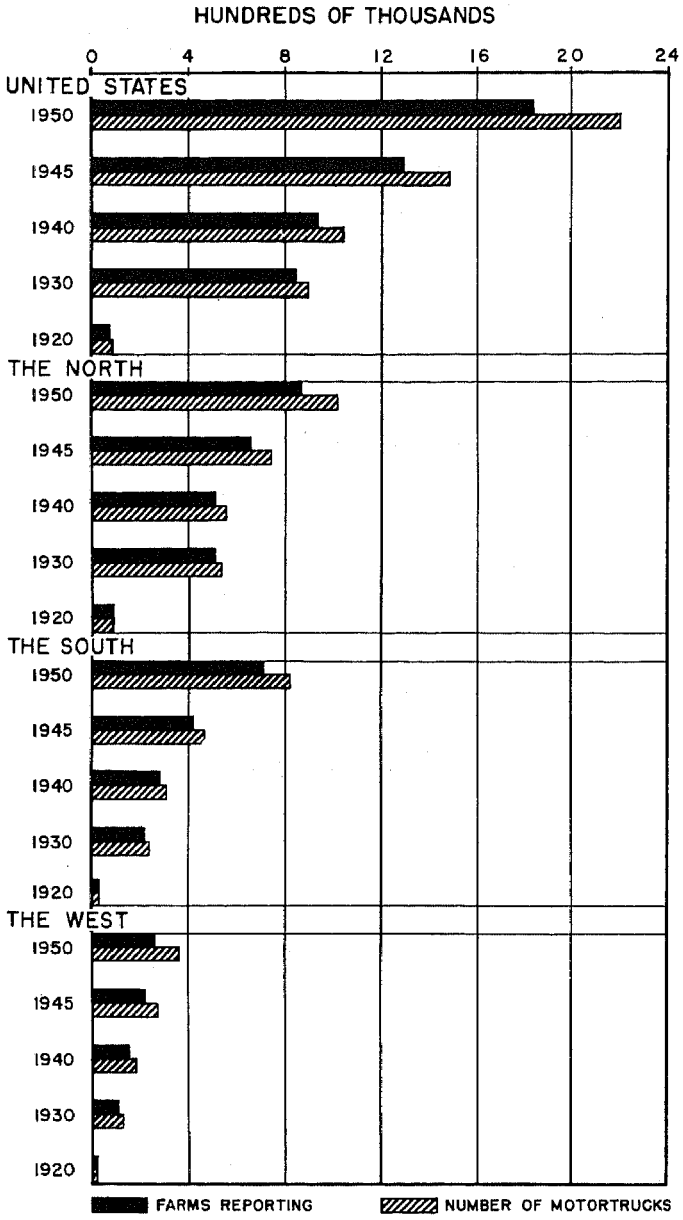
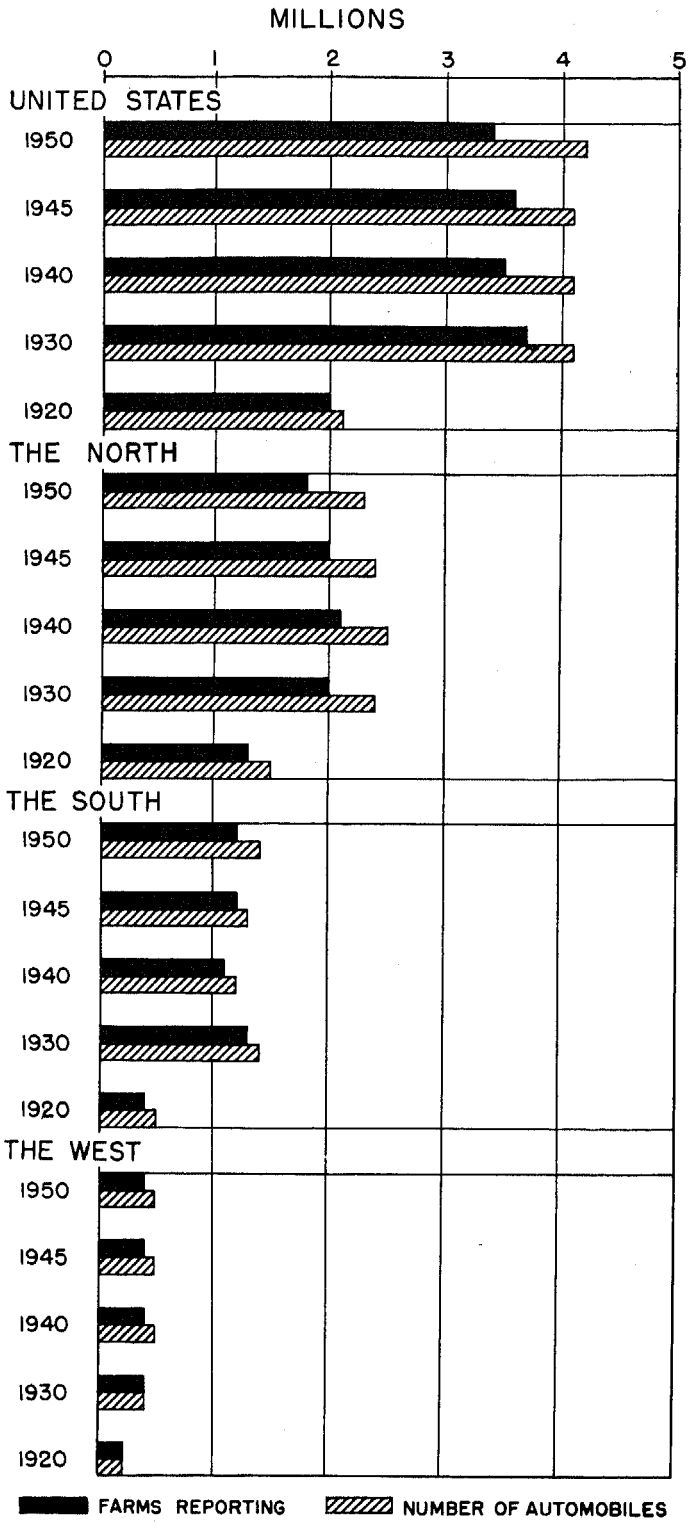
Average distance reported—miles	1.4	xxx	xxx
Distance not reported—farms	917,514	17.1	xxx
Distance to nearest all-weather road, 1945—farms reporting	5,566,365	95.0	100.0
0.0 to 0.2 miles—farms reporting	3,771,094	xxx	67.7
0.3 to 0.9 miles—farms reporting	600,937	xxx	10.7
1.0 to 4.9 miles—farms reporting	987,387	xxx	17.7
5.0 miles and over—farms reporting	206,947	xxx	3.8
Distance not reported—farms	292,804	5.0	xxx
Kind of road on which farm is located—farms reporting—1950	5,131,860	95.4	100.0
1940	5,849,688	95.9	100.0
1930	5,948,769	94.6	100.0
1925	6,165,454	96.8	100.0
Hard surface—farms reporting—1950	1,646,886	xxx	32.1
1940	1,146,936	xxx	19.6
1930 [1]	594,182	xxx	10.0
1925 [2]	472,961	xxx	7.7
Gravel, shell, or shale—farms reporting—1950	1,807,370	xxx	35.2
1940	1,731,477	xxx	29.6
1930 [3]	1,435,644	xxx	24.1
1925 [4]	946,057	xxx	15.3
Dirt or unimproved—farms reporting—1950	1,677,604	xxx	32.7
1940	2,971,275	xxx	50.8
1930	3,918,943	xxx	65.9
1925	4,746,436	xxx	77.0
Kind of road not reported—farms—1950	247,390	4.6	xxx
1940	247,111	4.1	xxx
1930	339,879	5.4	xxx
1925 [2]	206,186	3.2	xxx

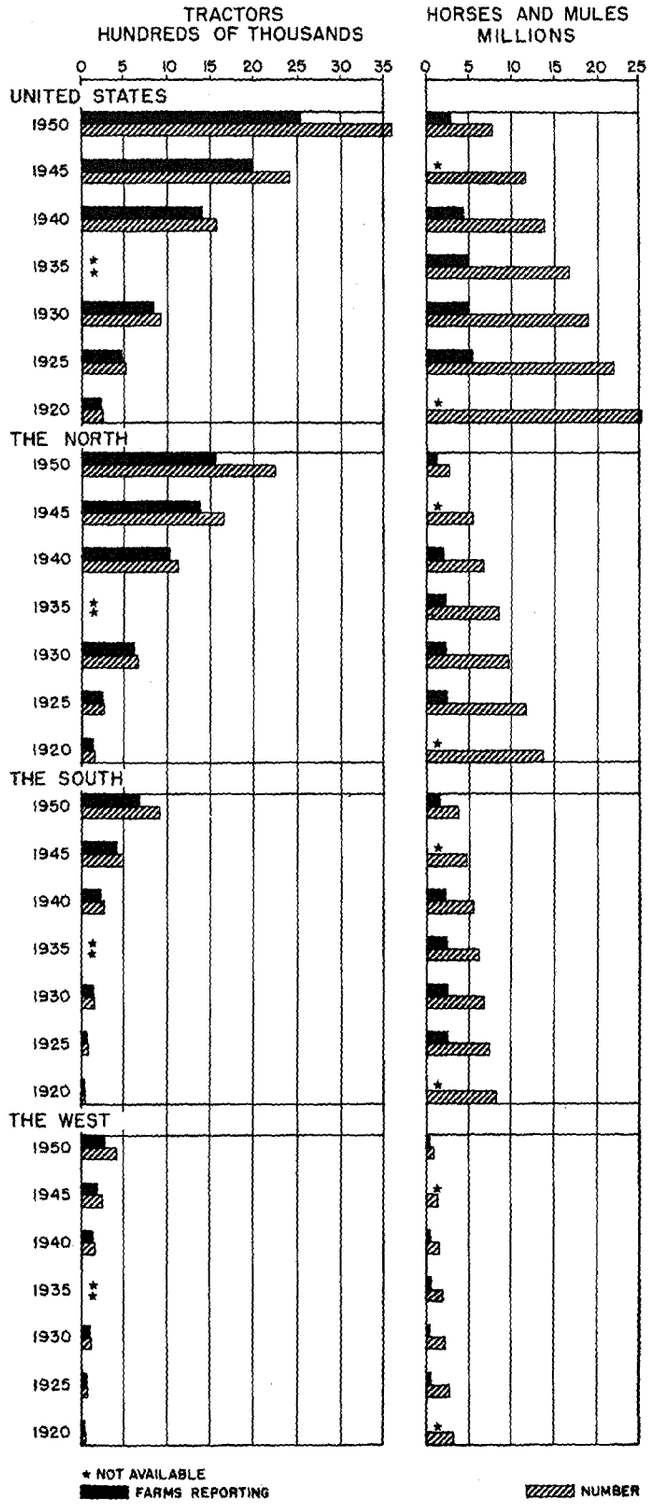
[1] Concrete, brick, asphalt, and macadam.
[2] For 1925, hard surface includes concrete or brick and macadam. Asphalt was included in an "All other (including not reported) group."
[3] Includes sand-clay.
[4] Gravel.



KIND OF ROAD—NUMBER OF FARMS REPORTING BY KIND OF ROAD ON WHICH LOCATED, FOR THE UNITED STATES AND REGIONS: 1925 TO 1950



PERCENT OF FARMS REPORTING MILKING MACHINES, GRAIN COMBINES, CORN PICKERS, PICK-UP HAY BALERS, AND SILOS, FOR THE UNITED STATES, AND REGIONS: 1950



FARMS REPORTING AND NUMBER OF MOTORTRUCKS ON FARMS, FOR THE UNITED STATES AND REGIONS: 1920 TO 1950

FARMS REPORTING AND NUMBER OF AUTOMOBILES ON FARMS, FOR THE UNITED STATES AND REGIONS: 1920 TO 1950

FARMS REPORTING AND NUMBER OF TRACTORS AND NUMBER OF WORK STOCK ON FARMS, FOR THE UNITED STATES AND REGIONS: 1920 TO 1950

PERCENT OF FARMS REPORTING MOTORTRUCKS, TRACTORS, AND AUTOMOBILES FOR THE UNITED STATES AND REGIONS: 1920 TO 1950

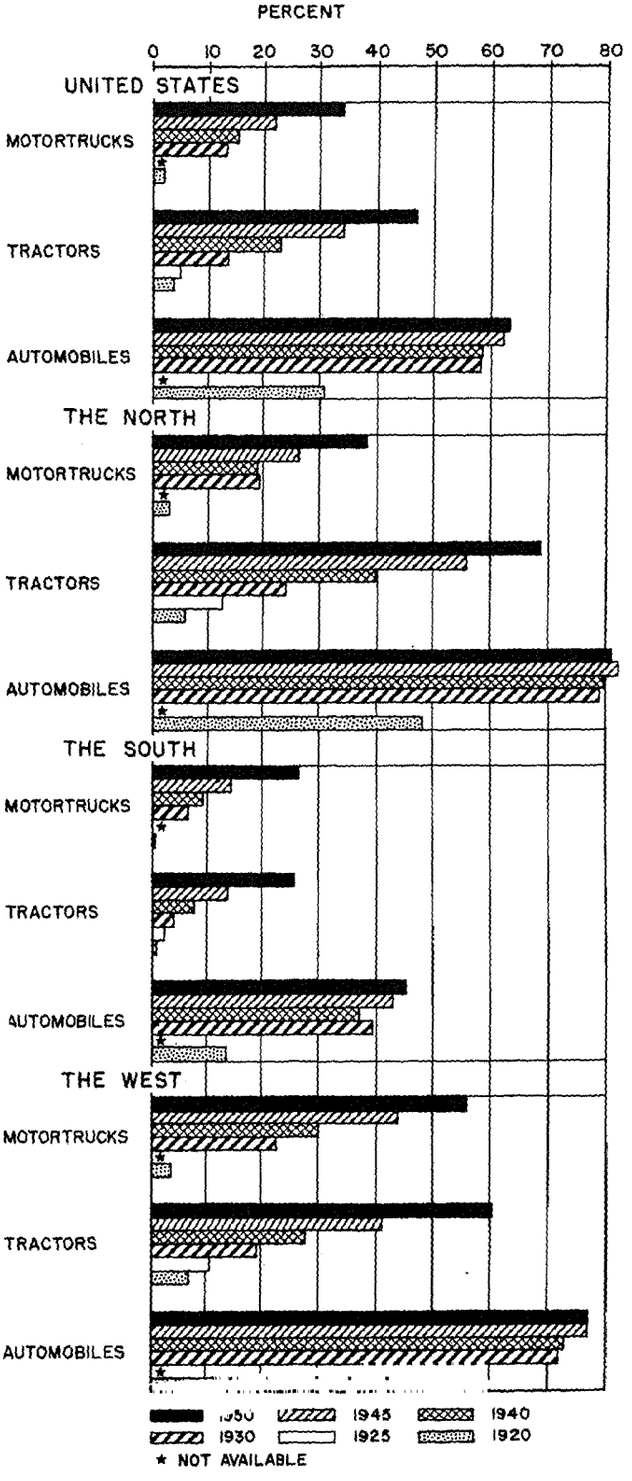


Table 4.—SPECIFIED FARM EQUIPMENT, FOR THE UNITED STATES: 1920 TO 1950

[Data in italics are based on reports for only a sample of farms. See text. Figures for divisions and States in tables 11 to 21]

[1] For 1945, farms not reporting year of newest model were distributed in the same proportions as those for which year of model was reported. It was estimated that about 85 percent of farms reporting motortrucks and tractors reported the year of newest model and about 90 percent of farms reporting automobiles reported the year of newest model.

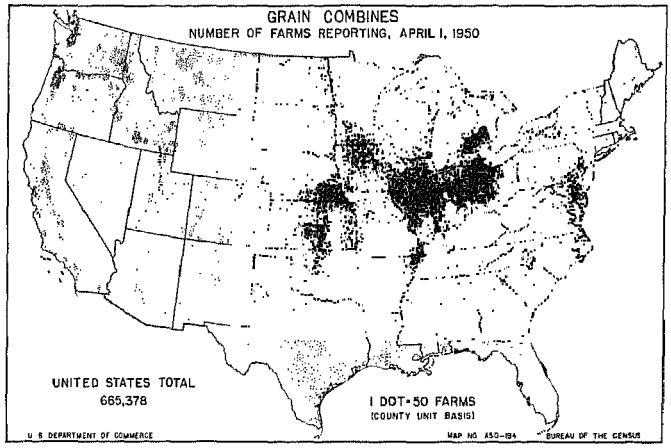
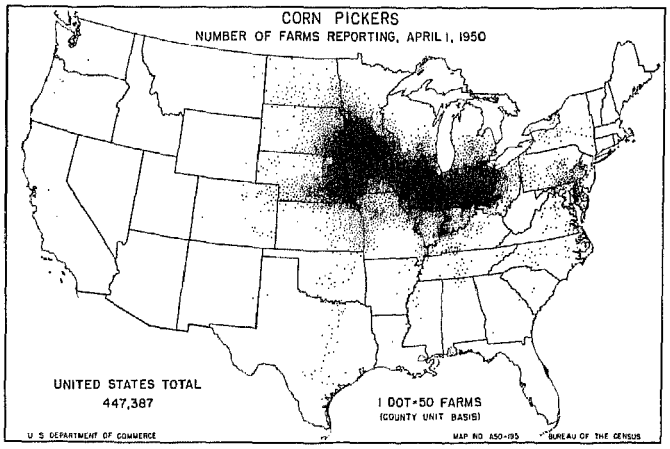
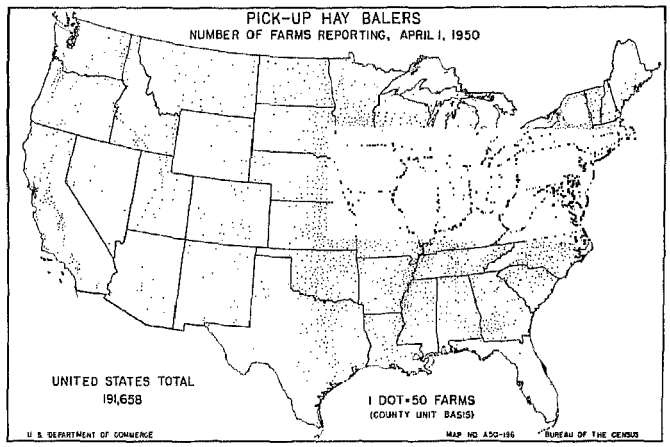
[2] Includes home-made tractors.



[3] First units on farms not reporting year of newest model, except for 1945 when farms not reporting were distributed, plus "home-made" tractors which in 1950 and 1940 were reported in lieu of year of newest model when the newest tractor was home-made.



[4] The number of home-made tractors as shown herein represents a minimum, as it includes only those representing the newest tractor on the farm. See text.



[5] The census inquiry was for year of newest model only.

*Not available. [1]Schedule inquiry in 1945 specified "in farm dwelling"; other censuses merely specified "on farm." In 1945, "in farm dwelling"; in 1930, "in farmer's dwelling house"; and in 1920, "gas or electric light in operator's house." [2]Questionnaire inquiry in 1950 specified "on farm"; in line within 1/4 mile. See text. [3]Farms with electricity and with electric distribution [4]Data for District of Columbia not included in totals.

AND STATES: 1920 TO 1950—Continued

machine for 1945 are based on reports for only a sample of farms. See text]

Farms reporting electricity[2]—Continued				Farms reporting specified electric facilities, 1950													Farms reporting specified facilities, 1945			
From a home plant only										Percent of farms with electricity reporting								Resident operators reporting		
1950	1940	Percent of farms with electricity		Electric water pump	Electric hot-water heater	Home freezer	Electric washing machine	Electric chick brooder	Electric power feed grinder	Electric water pump	Electric hot-water heater	Home freezer	Electric washing machine	Electric chick brooder	Electric power feed grinder	Both electricity and running water, all farms	Mechanical refrigeration	Power driven washing machine

Table 8.—FARMS BY AMOUNT OF LAST MONTHLY ELECTRIC BILL, BY DIVISIONS AND STATES: CENSUS OF 1950

[Data are based on reports for only a sample of farms. See text]

	Region, division, and State	Farms reporting electricity from a power line	Farms, by amount of last monthly electric bill															
			Farms reporting								Average of last monthly electric bill (dollars)	Not reporting	Percent distribution of farms reporting						
			Total	Under $3.00	$3.00 to $4.99	$5.00 to $9.99	$10.00 to $14.99	$15.00 to $19.99	$20.00 to $24.99	$25.00 and over			Under $3.00	$3.00 to $4.99	$5.00 to $9.99	$10.00 to $14.99	$15.00 to $19.99	$20.00 to $24.99	$25.00 and over

*Not available. [1]For 1945 no figures available for farms not reporting year of newest model. For the U. S. it was estimated that about 85 percent of the farms reporting motortrucks reported the year of newest model. [2]10 years or older. [3]Data for District of Columbia not included in totals.

Table 14.—PERCENT DISTRIBUTION OF FARMS REPORTING MOTORTRUCKS, BY YEAR OF NEWEST MODEL, BY DIVISIONS AND STATES: CENSUS OF 1950

[Data are based on reports for only a sample of farms. See text.]

	Region, division, and State	Farms reporting year of newest model													Farms not reporting year of newest model	Average year of newest model	Median year of newest model

* Not available.

[1] For 1945, no figures available for farms not reporting year of newest model. For the U. S. it was estimated that about 90 percent of the farms reporting automobiles reported the year of newest model.

[2] Data for District of Columbia not included in totals.

Table 21.—PERCENT DISTRIBUTION OF FARMS REPORTING AUTOMOBILES, BY YEAR OF NEWEST MODEL, BY DIVISIONS AND STATES: CENSUS OF 1950

[Data are based on reports for only a sample of farms. See text.]

	Region, division, and State	Farms reporting year of newest model													Farms not reporting year of newest model	Average year of newest model	Median year of newest model

16.—Wage rates by perquisites furnished, by divisions and States: 1950	291
17.—Specified farm expenditures, by divisions and States: 1949, 1944, and 1939	293
18.—Percent of all farms reporting specified expenditures, by divisions and States: 1949, 1944, and 1939	296
19.—Average of specified expenditures per farm reporting, by divisions and States: 1949, 1944, and 1939	297
20.—Number of farms reporting specified amounts of expenditures for hired labor, by divisions and States: 1949 and 1944	298
21.—Percent distribution of farms reporting cash expenditures for labor by amount expended, by divisions and States: 1949 and 1944	300

CHAPTER IV.—FARM LABOR AND FARM EXPENDITURES

Introduction.—This chapter presents statistics on farm labor and specified farm expenditures. The information on labor relates to farm operators, unpaid members of their families doing farm work or chores, and hired workers. Data for hired workers show: (*a*) The number of regular and seasonal workers; (*b*) the number of persons paid on a monthly basis, on a weekly basis, on a daily basis, on an hourly basis, and on a piecework basis; and (*c*) the wage rates, hours worked, and kinds of perquisites furnished. Information on expenditures relates to the amounts paid, in the calendar year preceding the census, for machine hire; hired labor; feed for livestock and poultry; purchase of livestock and poultry; seeds, bulbs, plants, and trees; gasoline and other petroleum fuel and oil; tractor repairs; and other farm machinery repairs. These expenditure items, according to the U. S. Department of Agriculture, account for approximately 60 percent of the outlays made by farm operators in conducting their farming activities.

Sources of data.—The data presented are from the 1950 Census of Agriculture with comparative data for earlier censuses. In the 1950 Census, the information for labor and expenditures was obtained for only a sample of farms. In 1945, the information for a few items was also obtained only on a sample basis. When data are based on the reports for only a sample of farms the table carries a headnote to that effect.

For an explanation of the sampling procedure used for the 1950 Census, and for tables giving the reliability of estimates based on reports for only a sample of farms, reference should be made to the Introduction to this volume. Also included in the Introduction is a description of the procedures used in the enumeration and in the processing of the statistics.

Presentation of statistics.—The statistics are presented as totals for the United States, for 3 major regions, for 9 geographic divisions, and for each of the 48 States and the District of Columbia. An outline map showing the States, geographic divisions, and regions for which totals are shown appears in the Introduction.

Some of the tables present data for the 1950 Census only, while other tables include comparative data for earlier census years.

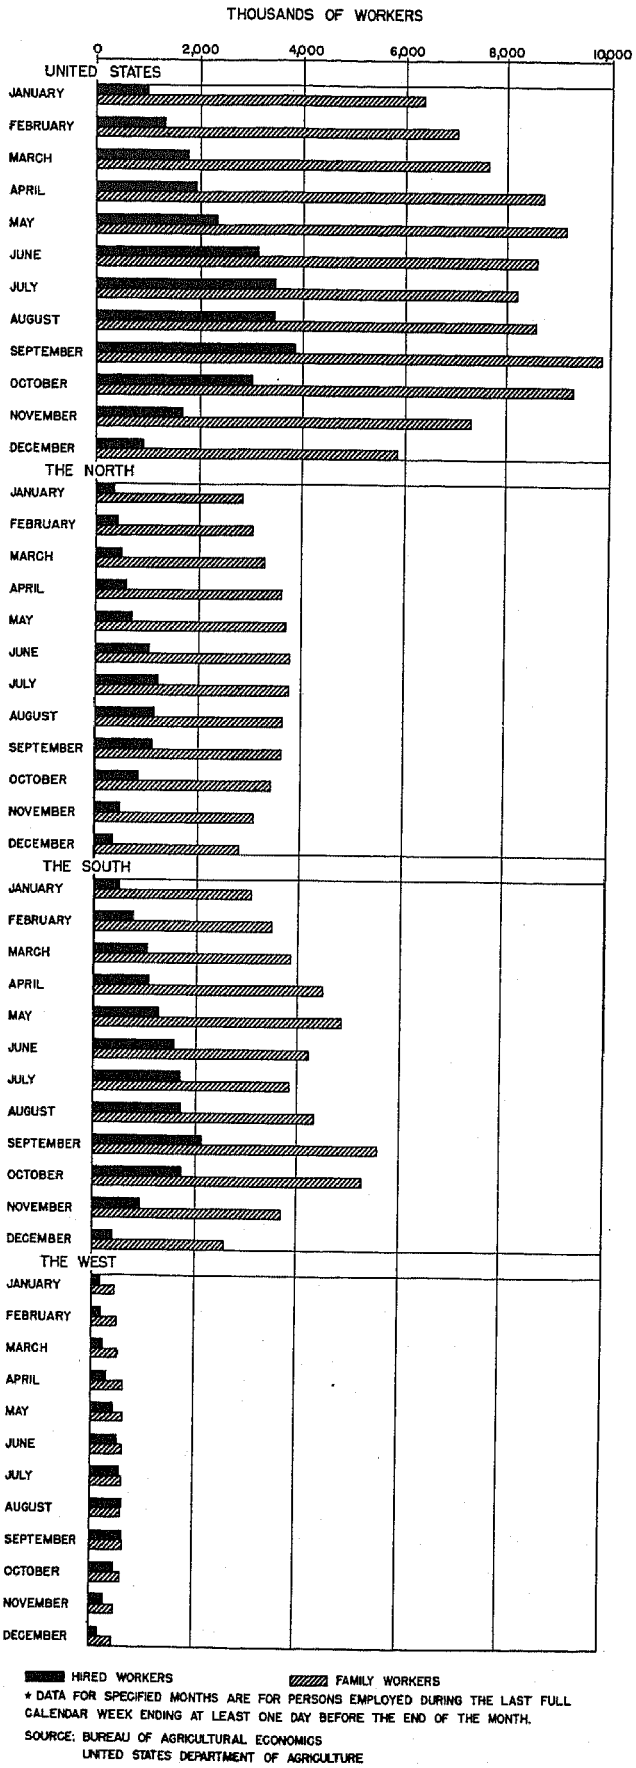
Many factors affect the comparability of statistics from one census to another. When making comparisons for labor and expenditure items, consideration should be given to differences in the wording of the specific questions. In making comparisons of the labor items, differences in the date of enumeration should also be taken into consideration. The text and the headnotes and footnotes on the tables explain briefly the comparability of the data for different census years.

Other published data.—Many of the data for farm labor and farm expenditures are shown by counties and by State economic areas in Volume I, Counties and State Economic Areas, of the 1950 Census of Agriculture reports. Data for these items, classified by size of farm, appear in chapter X of this volume; by color and tenure of operator in chapter XI; by economic class of farm in chapter XII; and by type of farm in chapter XIII. Some data, by these classifications, are also presented by State economic areas in Volume I. (See the Introduction to Volume I for availability of data for various geographic levels.) Information on cash rent paid and taxes paid is presented in chapter V of this volume.

Occupation statistics obtained in the 1950 Census of Population provide a count of persons in the labor force employed in agriculture. These statistics appear in chapter B of Volume II of the 1950 Census of Population reports.

DEFINITIONS AND EXPLANATIONS

The descriptive terms and explanations refer principally to the 1950 Census of Agriculture, although, in general, they are applicable to earlier censuses. The definitions consist primarily of a résumé of the questionnaire wording, occasionally supplemented by the more essential parts of instructions and procedures for enumerating and processing the questionnaires. For the exact phrasing of the inquiries, reference should be made to the facsimile of the 1950 Agriculture Questionnaire shown in the Appendix.



Definitions having a general application, such as those for "a farm," "a farm operator," and "farms reporting," and factors influencing the data for specified items are discussed in the Introduction to this volume and are not considered in this chapter.

Farm labor.—In the 1950 Census, the questions included on farm labor were worded in such way as to obtain the number of persons who worked at farm work or chores on the place during the calendar week preceding the enumeration. Separate figures were obtained for operators, for unpaid members of the operator's family, for regular hired workers, and for seasonal hired workers. Operators were included as farm workers if they worked 1 or more hours during the specified week; unpaid members of the operator's family, if they worked 15 hours or more; and hired workers, if they were employed any time during the week preceding the enumeration.

No age limits were specified in regard to reporting the number of persons working on farms in 1950. The enumerator was instructed to consider as farm work any farm chores or planning necessary to the operation of the farm or ranch business. Farm work was to include: feeding and caring for livestock and poultry; working in the field; working in the home garden; cleaning and caring for milk pails and separators; planning farm or ranch work; supervising help; hauling the farm or ranch products to market; hauling feed, fertilizer, or other supplies from town to the farm or ranch; keeping farm or ranch records; repairing fences, farm equipment, machinery, etc.; and constructing buildings and fences with farm help. The enumerator was instructed not to include: housework, contract construction work done by persons employed specifically to do such work, or labor performed by inmates of institutions. In case of machine hire, workers included in the cost of the machine hire were not to be included.

Since the enumeration in 1950 extended over a period of several weeks, the week preceding the enumeration for which farm workers were to be reported was not the same for all farms. For the

WORKERS ON FARMS BY MONTHS, FOR THE UNITED STATES AND REGIONS*: 1950

* DATA FOR SPECIFIED MONTHS ARE FOR PERSONS EMPLOYED DURING THE LAST FULL CALENDAR WEEK ENDING AT LEAST ONE DAY BEFORE THE END OF THE MONTH.

SOURCE: BUREAU OF AGRICULTURAL ECONOMICS
UNITED STATES DEPARTMENT OF AGRICULTURE

United States, the enumeration extended over a period of more than 3 months, but the approximate average date was in the period of April 15 to April 28, 1950.

The number of persons reported as working on farms during the week preceding the enumeration in 1950 probably does not represent the maximum number of persons employed in agriculture. At that season of the year there is normally, for most areas, increasing activity in farm work as the season advances. Employment of labor on farms for the United States as a whole normally reaches a peak about September.

Also, for some farms, the number of persons working during a particular week may be less than the number normally employed at that period of the year because of adverse weather or other conditions. On the other hand, there was an opportunity for a worker to be reported on two or more farms. For instance, a cropper might have been reported as a working farm operator on his own farm and as a hired worker on his landlord's farm.

The data on numbers of farm workers are subject to considerable response errors because of the complexity of the inquiries and the varying interpretations. For those persons working only at intervals, or working at both farm and nonfarm jobs about the home, no concise determination was possible, particularly since some of the jobs were difficult to classify as farm or nonfarm. A few farm operators may have reported workers hired at some period other than during the week specified. Some operators may have reported persons whom they usually employ but who were not actually working on their farms during the specified week.

If a part of a landholding was worked on shares by croppers, under the close supervision of the landlord, the landlord may have considered his croppers as hired workers even though they did no work on the landlord's farm in the week preceding the enumeration. Some croppers are employed by their landlord for cash wages on a part-time basis, but few are employed as wage hands for as long as 150 days during the year. If the landlord counted his croppers as hired workers, he might have erroneously reported them as workers whom he expected to employ for 150 days or more during the year.

Another possible source of error in reporting farm workers is duplication of reporting because of a misunderstanding of the term "this place." The inquiry called for the number of persons working on "this place," meaning the farm as identified for purposes of the census of agriculture. If "this place" were interpreted to mean the entire landlord holding, the operator of each part of the holding for which sample information was obtained would have had an opportunity to report workers for the entire holding rather than for his own operation. Since the inquiries on farm labor were asked for only a sample of farms enumerated, it is probable all of such over-reporting was not detected in the office processing of the questionnaires.

Information on number of farm workers was also obtained in agricultural censuses for 1945, 1940, and 1935. The data are not exactly comparable primarily because of the differences in the dates of enumeration, in the wording of the questions, and in the instructions to enumerators. The accompanying outline shows for each of the four census years the basic requirements covered by the instructions to enumerators and by the wording of the inquiries on the questionnaire.

For each of the years, 1945, 1940, and 1935, the inquiry on numbers of persons working on farms specified a week representing approximately the census date, that is, the date to which all inventory items were to apply. At each census, the enumeration was begun on or after this date and continued for several weeks. Thus, most farms were not visited until several days after the week specified. It is very likely that, because of the difficulty in

remembering, the respondents may have tended to report the number of persons working at the time of enumeration assuming that this number represented approximately the number of persons working during the week specified. Thus, for 1940, although the last week of March was specified, the numbers of persons reported may be for approximately the same period of the year as the 1950 reports. Likewise, the 1945 figures, although nominally for the week ending January 6, may be more nearly comparable with 1950 than the specified weeks would indicate. In 1945, the enumeration was very much delayed because of wartime conditions, the average date being during the period March 16 to March 31.

COMPARISON OF IMPORTANT POINTS IN THE INSTRUCTIONS FOR ENUMERATING FARM WORKERS IN THE CENSUS OF AGRICULTURE FOR 1950, 1945, 1940, AND 1935

Item	1950 (April 1)	1945 (January 1)	1940 (April 1)	1935 (January 1)
Information enumerated separately for	(1) Operator (2) Unpaid members of operator's family. (3) Hired workers	(1) Operator (2) Unpaid members of operator's family. (3) Hired workers	(1) Family workers (operator and unpaid members of operator's family). (2) Hired workers	(1) Family workers (operator and unpaid members of operator's family). (2) Hired workers.
Week covered by enumeration	Week preceding the enumeration [1]	Week ending January 6, 1945	March 24–30, 1940, and Sept. 24–30, 1939.	First week of January 1935.
Age of workers to be included	None specified	14 years old and over	14 years old and over	None specified.
Hours to be employed at farm work during specified week	(1) Operator, 1 hour or more. (2) Unpaid members of operator's family, 15 hours or more. (3) Hired workers, any	(1) All workers, equivalent of 2 or more days.	(1) All workers, equivalent of 2 or more days.	(1) Operator not specified. (2) Other workers, equivalent of 2 or more days.
Farm chores	Specifically included	Specifically included	Not mentioned	Not mentioned.
Inmates of institutions	Specifically excluded	Unpaid inmates excluded	Inmates who spend entire time working on farm included.	Not mentioned.
Contract construction work	Specifically excluded	Specifically excluded	Specifically excluded	Not mentioned.
Housework	Specifically excluded	Specifically excluded	Specifically excluded	Specifically excluded.

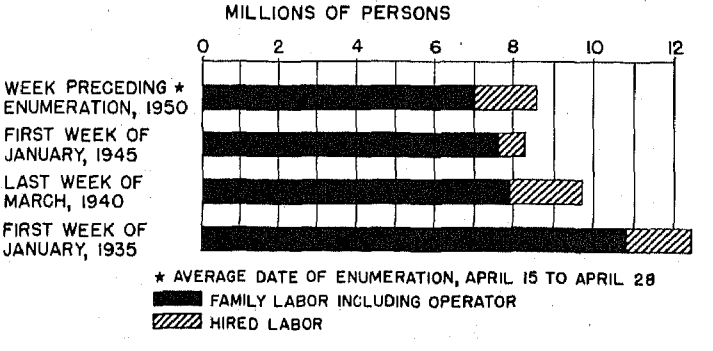
[1] For average date of enumeration by States, see table in Introduction to this volume.

In the population censuses, data for persons in the labor force are tabulated by occupation. These statistics for agricultural workers, although obtained at the same time, are not comparable with those obtained in the censuses of agriculture and therefore are not included in this chapter. Some of the major differences in the two sets of data for 1950 are as follows:

(1) The data were tabulated from two different sources. The occupation statistics were tabulated from information reported on the population questionnaire, while the numbers of persons working on farms were tabulated from the agriculture questionnaire. At no time were these questionnaires checked one with the other for these data.

(2) In the occupation statistics, persons were allocated to a particular class-of-worker category on the basis of the jobs at which they worked the greatest number of hours during the week preceding the enumeration; in the agriculture census, persons were to be reported as working on the farm if they worked the stated minimum hours or more during the week, regardless of the hours spent at other employment.

(3) In the occupation statistics, only persons 14 years old and over were included; in the agriculture census, there was no specified age limit for persons reported as working on farms.



(4) In the occupation classification, farmers, farm managers, farm laborers, and farm foremen include: (*a*) some persons working on places which did not qualify as farms for purposes of the agriculture census: (*b*) self-employed farm service laborers; and (*c*) some landlords who, although not operating farms on their own account, did consider the time spent in taking care of their property, or in supervision of their tenants, as farm work.

(5) In the census of agriculture, the persons reported as working on farms may include some duplications. Some persons may have worked on more than 1 farm sufficient hours to be included on each farm.

For the week preceding the enumeration in 1950, there were 8,538,064 workers reported on farms in the United States. Of this number, 1,555,269 were hired workers and 6,982,795 were operators and unpaid family workers. The heaviest concentration of hired workers was in the New England, the Middle Atlantic, and the North Central States and in a few of the more intensive agricultural producing areas in the States of Florida, California, and Washington. Of the total family workers, 39.2 percent were unpaid members of the operator's family.

Because of the lack of comparability of the data on numbers of workers for different census years, the trend in the number of farm laborers cannot be determined very accurately. The figures for 1940 are for approximately the same time of year as those for 1950, while the figures for 1945 and 1935 are for a time of year when employment is at a much lower level. Therefore, in table 14, the data are arranged to provide direct comparison of the 1940 figures with those for 1950. Analysis of the data for the four census years indicates that the trend, insofar as it can be determined, has been toward fewer workers, both family and hired, on farms.

FARM LABOR—NUMBER OF PERSONS WORKING DURING SPECIFIED PERIODS, FOR THE UNITED STATES: 1935–1950

The number of persons reported as working on farms during the week preceding the enumeration in 1950 was 14.5 percent less than the number reported as working the last week in March 1940. This decrease took place in spite of the fact that the 1950 figures may have represented employment at a somewhat later

period in the season when the rate of employment on farms would be expected to be increasing. Furthermore, the 1950 figures include workers regardless of age, while the 1940 data were restricted to persons 14 years old and over. During this 10-year period, cropland harvested increased 7.2 percent. There were also substantial increases in livestock and poultry production. The increased mechanization of farms has lessened the need for farm workers. However, some of the decrease in the number of workers on farms may be attributed to the change in the definition of a farm, which eliminated from the farm count, in 1950, some places with limited agricultural operations. Although places with very limited agricultural operations average fewer workers, it is probable that the loss in workers because of change in definition of farms amounted to nearly 1 worker per farm lost. In 1950, the lower-income farms (part-time and residential) averaged 1.5 workers per farm reporting, with 72.2 percent of the farms reporting workers, as compared with an average of 1.9 workers per farm reporting for all farms, with 84.5 percent reporting workers. (See Introduction to this volume for discussion of changes in numbers of farms due to change in definition.)

From 1935 to 1945, there was a large decrease both in the number of farms and in the number of family and hired workers on farms. However, the percentage decline in the number of workers was much greater than in the number of farms reporting, with the result that the number of workers per farm reporting was considerably lower in 1945 than in 1935. Much of this change may be attributed to World War II and the increased opportunities for nonfarm employment in 1945 as compared with 1935.

Operators working.—A separate count of farm operators who were included as workers is available only for the 1950 and 1945 Censuses. Only one person per farm was to be counted as the farm operator. In the case of a partnership, the active or senior partner was to be considered the operator. Members of a partnership, other than the active or senior partner, working during the specified week were to be counted as unpaid family workers.

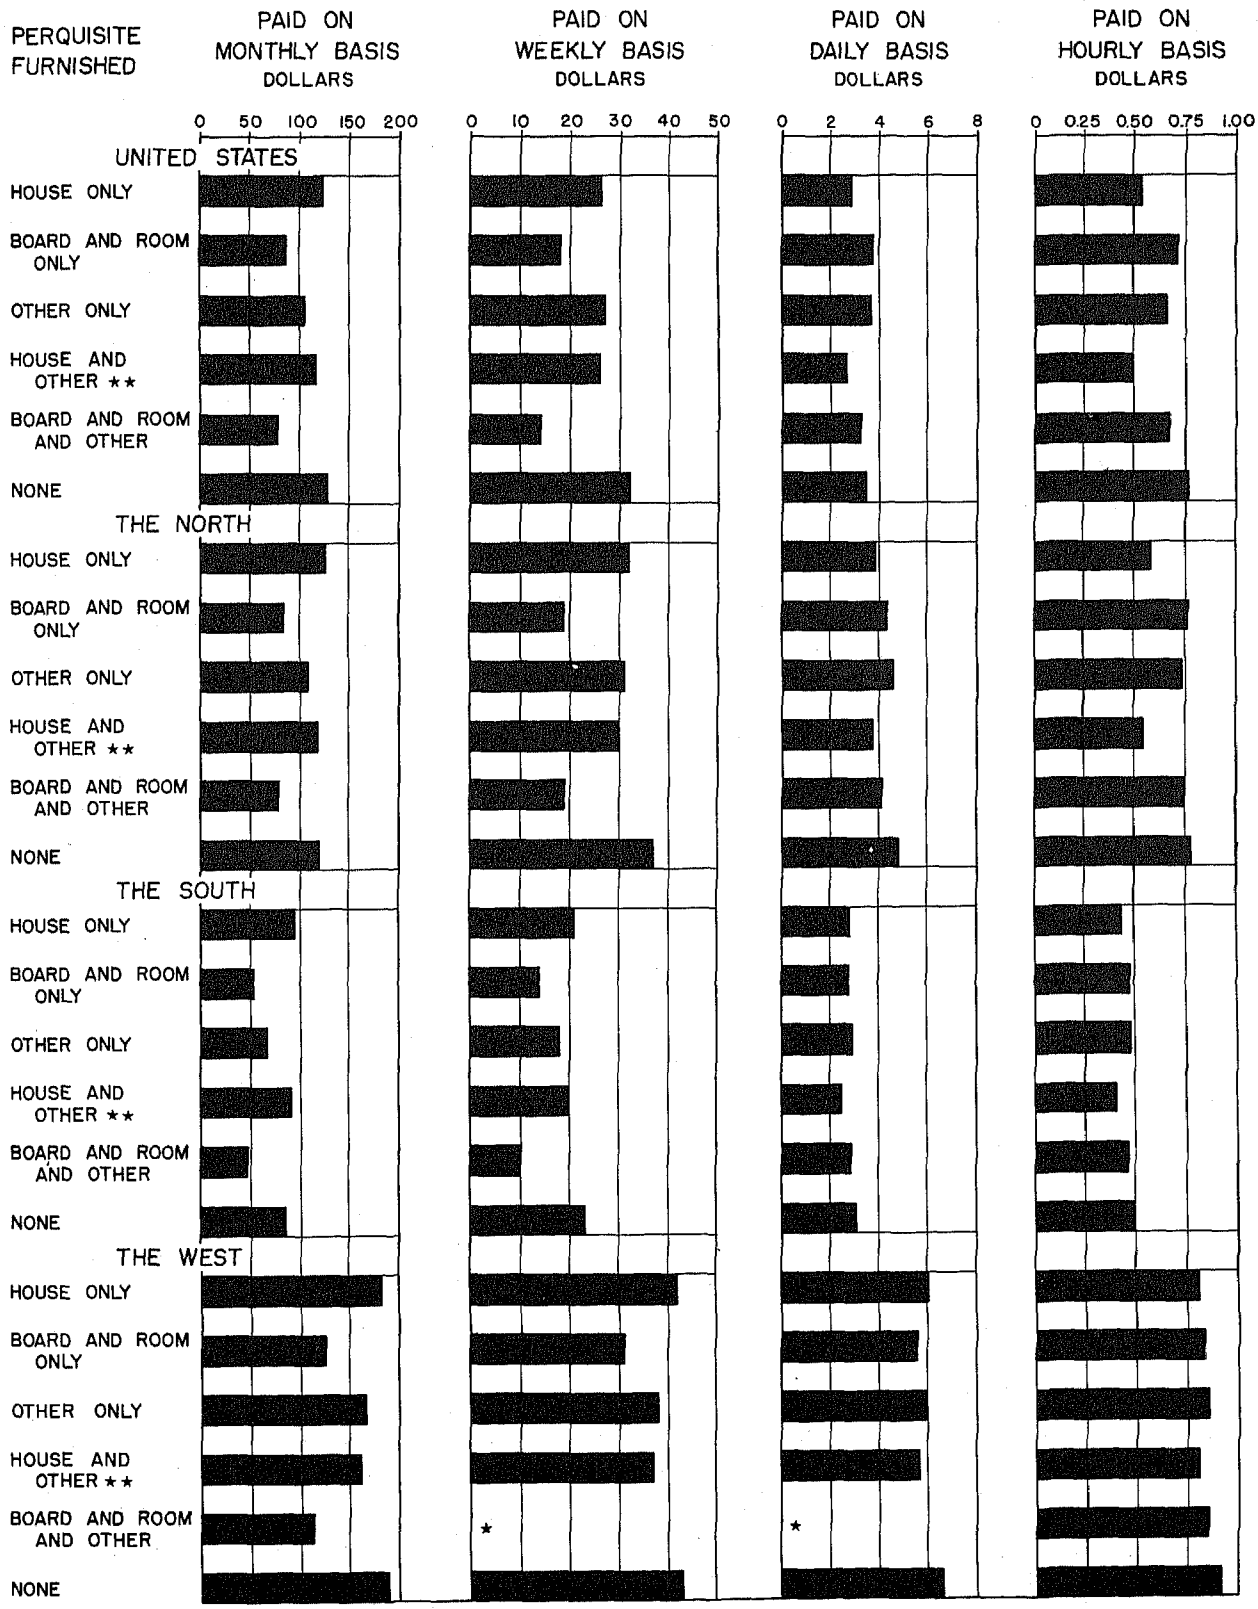
In 1950, operators working 1 or more hours during the specified week were included, while in 1945 only operators working 2 or more days during the specified week were included. In 1950, of 4,246,072 farm operators reported as working on their farms 1 or more hours during the week preceding the enumeration, 700,228, or 16.5 percent, reported that they worked less than 15 hours during the week preceding the enumeration. For 1940 and 1935, farm operators were not shown separately from other family workers. In 1940, the equivalent of 2 or more days of work for the specified week applied to all workers, and in 1935, to all workers except the farm operator. However, the instructions on the 1935 Questionnaire did not make it clear that the 2 or more days did not apply to the operator. Although clarified in a later instruction, the inquiry may have been interpreted as requiring the equivalent of 2 or more days of work by the farm operator.

Unpaid members of operator's family working.—Data for unpaid members of the operator's family reported as working during the specified week in 1950 are approximately comparable with those reported in 1945 in respect to hours worked (15 hours or more in 1950 and 2 or more days in 1945). The data differ as to age qualifications and time of year. In 1950, there was no age qualification, while in 1945, only workers 14 years old and over were to be included. The week for which workers were reported was in late March or in April (or later, in some instances) for 1950, while in the 1945 Census, the first week in January was specified on the schedule.

Hired labor.—Much more detailed information about hired farm workers was obtained in the 1950 Census than in any previous census. The inquiries on the questionnaire provided for obtaining: (*a*) the total number of hired workers employed during the week preceding the enumeration; (*b*) the number of hired workers by the period of expected employment during 1950 (150 days or more, or less than 150 days); (*c*) the number of hired workers by basis of payment; and (*d*) the hours worked, wages paid, and the perquisites furnished.

Regular and seasonal workers.—Hired workers on the farm during the week preceding the enumeration were classified, in the 1950 report, as "regular" workers if the period of expected employment in 1950 was 150 days or more and as "seasonal" workers if the period of expected employment was less than 150 days. For the few reports for which the period of expected employment was not indicated, workers were classified, during office processing, as regular or seasonal, on a judgment basis, taking into account the type of farm, the wage rates, the perquisites furnished, the approximate seasonal labor requirements for the operations shown, and the like. Comparable information for regular and seasonal workers was not obtained for any previous census year.

Of the farms reporting hired workers the week preceding the enumeration, 61.4 percent reported regular workers and no seasonal workers, 28.3 percent reported seasonal and no regular workers, while only 10.3 percent reported both regular and seasonal workers. Of the total number of 1,555,269 hired workers, 1,014,518, or 65.2 percent, were classified as regular and only 34.8 percent were classified as seasonal workers. The proportion of hired workers classified as either regular or seasonal shows a wide variation among the States. In Wisconsin, Iowa, and Minnesota, the proportions of all hired workers that were classified as regular were 81.2, 74.8, and 74.4 percent, respectively. In contrast, North Carolina showed only 49.5; Florida, 53.1; and California, 58.0 percent of all hired persons classified as regular workers. In general, the proportions of regular workers are highest in the areas where livestock production is important. This is due primarily to a more even distribution of labor requirements throughout the year.



Basis of payment.—The 1950 Census Questionnaire provided for obtaining the number of hired workers who were paid on a monthly basis, on a weekly basis, on a daily basis, on an hourly basis, and on a piecework basis. When the basis of payment was not indicated, no attempt was made to supply the missing information. Separate totals are shown for workers for whom the basis of payment was reported.

For the United States, 25.8 percent of all hired workers were reported as being paid on a monthly basis, 12.6 percent on a weekly basis, 30.4 percent on a daily basis, 23.1 percent on an hourly basis, and 6.2 percent on a piecework basis. Wide variations existed throughout the country in the proportion of workers reported for each basis of payment. In the Middle Atlantic, East North Central, West North Central, and Mountain States the prevailing method of payment was on a monthly basis; while in the New England States, the weekly basis of payment was the most common. In the South, almost half of all hired workers were reported as being paid on a daily basis, and in the Pacific States, more than half were paid on an hourly basis.

In 1940, the inquiries on hired labor called for the number of workers for each of three classifications, as follows: (1) Labor hired by the month; (2) labor hired by the day or week; and (3) others (including piecework and contract labor). Because of differences in the wording of the inquiries in 1940 and in 1950, the data may not be entirely comparable. In 1940, the classification was made on the basis of hiring, while in 1950, the classification was made on the basis of payment.

Wage rates.—For each basis of payment, except for workers hired on an hourly and on a piecework basis, the questionnaire called for the cash rate of pay and the hours that the hired persons were expected to work to earn the reported rate. For each basis of payment, the questionnaire called for what perquisites, other than cash wages, were received by the workers. (See discussion of "Perquisites" which follows.) If there were 2 or more

MEDIAN WAGE RATES FOR HIRED WORKERS ON FARMS, BY PERQUISITES RECEIVED, BY BASIS OF PAYMENT, FOR THE UNITED STATES AND REGIONS: CENSUS OF 1950

* MEDIAN NOT SHOWN WHERE LESS THAN 50 FARMS REPORTING.
** INCLUDES FARMS REPORTING "HOUSE AND BOARD AND ROOM" AND "HOUSE, BOARD AND ROOM, AND OTHER".

237460 O - 53 - 19

workers hired on the same basis of payment, the average rate of pay per person and the average number of hours worked per person were to be reported.

Data on wage rates and hours worked for workers for each basis of payment are limited to those for whom both the wage rates and the hours worked were reported. The wage rates and hours worked reflect widely varying types of workers and working arrangements. Many workers are employed only part time even though they may be paid on a monthly, weekly, or other pay basis, working only a few hours each day, or only 1 or 2 days a week. These part-time workers account, in part, for the variability in the average number of hours worked and in the average wage rates for each basis of payment. In some cases, children or elderly persons who are not expected to accomplish much work may be paid a small wage in addition to board and keep and therefore were reported to the Census enumerator as hired workers. Some workers, in addition to the usual perquisites, may receive a share of the farm products. For example, a worker on a dairy farm may receive a small cash wage and a share of the milk sales.

The average wage per month, week, day, and hour, and the average number of hours worked for each basis of payment represent averages per worker. To obtain these averages, the average hours and average wage rates for each report were multiplied by the number of workers in each basis-of-payment group. The accumulated totals of these products were then divided by the total workers in the corresponding group for which both the wage rate and hours were reported.

For the United States, the average wage rate per person was $118 for workers paid by the month, $28 for workers paid by the week, $3.66 for those paid by the day, and $0.67 for those paid by the hour. By major regions, the wage rates were highest in the West and lowest in the South. The State reporting the lowest average monthly wage rate was Alabama, with $64, and the State reporting the highest average rate was California, with $209. The wage rates are in addition to any perquisites furnished the workers.

The average length of time farm workers in the various basis-of-payment groups were expected to work to earn the above rates of pay was, for the United States as a whole, 239 hours for those paid by the month, 52 hours for those paid by the week, and 9.2 hours for those paid by the day. Workers paid by the month and by the week in the North were expected to work longer hours than workers for the same basis of payment in either the South or West.

A classification was made, within each basis-of-payment group, of the number of farms reporting by specified rates of pay. Thus, for farms which reported workers paid on a monthly basis, the distribution shows the number of farms whose workers received less than $25 per month, the number of farms whose workers received $25 to $34 per month, and so on through the specified range, including the upper-payment group receiving $215 or more per month. For those farms with 2 or more workers in a given basis-of-payment group, the average wage determined the wage group in which the farm was placed. The number of workers earning a particular wage is not available. In using these data, it should be kept in mind that some of the lower wage rates are due to workers working on farms on a part-time basis and also to perquisites furnished which are excluded, and which, in some instances, may represent a large proportion of the total pay. A separate tabulation was made by the amount of wages paid for those farms with only 1 worker in a specified basis-of-payment group. The number of workers in such groups should, of course, be the same as the number of farms represented. It is possible to measure, in part, the effect of perquisites furnished on the amount of wages paid by making an analysis of these 1-worker groups.

The median wage rates, given in table 16, were computed from data for farms classified by wage rates. The base data for these figures appear in Volume I. In computing the medians, it was assumed that the farms within each frequency group were equally distributed throughout the range of that group. For wage rates per day, which are reported in whole dollars, the computed medians are shown in dollars and cents. It was assumed that respondents, when reporting daily wage rates, gave the amounts to the nearest dollar. Therefore, reports of $1 were considered to include up to $1.49; reports of $2, a range from $1.50 to $2.49; etc. If the median fell in the highest frequency group, $8 and over, the median was not computed but is shown as being $7.50 or higher.

Perquisites furnished.—Farm operators were asked to indicate what perquisites, other than cash wages, were received by workers. The questionnaire provided for indicating, for each basis-of-payment group, one or more of the following items furnished, other than cash, as follows: (1) house; (2) board and room; (3) other; and (4) none.

"Other" perquisites, as used on the agriculture questionnaire, may represent varying amounts or types of compensation to supplement the cash wages received by farm workers. In some cases, it represents only a small remuneration, such as the use of a small plot for a garden. It could also refer to varying amounts of fruits, vegetables, or livestock or livestock products for home use. In other cases, it may mean a sizable share of a crop or a share of the livestock or livestock products. The wide differences in the value of the perquisites received, particularly "other" perquisites, explain, in part, the large variations in cash wages received by farm workers.

If a farm had two or more hired workers in the same basis-of-payment group, no provision was made for reporting separately those receiving different perquisites. For example, two workers in the same basis-of-payment group may have been reported as receiving a house in addition to their cash wages. This may mean either that both workers received a house or one received a house and the other was furnished no perquisites. If there were two or more workers in the same basis-of-payment group, the farms were tabulated on the basis of all the perquisites reported for that group of workers.

Farms reporting hired workers were grouped, by perquisites furnished for the specified basis of payment, as follows:

None.—Includes farms with only "none" reported for items of perquisites furnished.

House only.—Includes farms with reports of only "house," or "house" and "none."

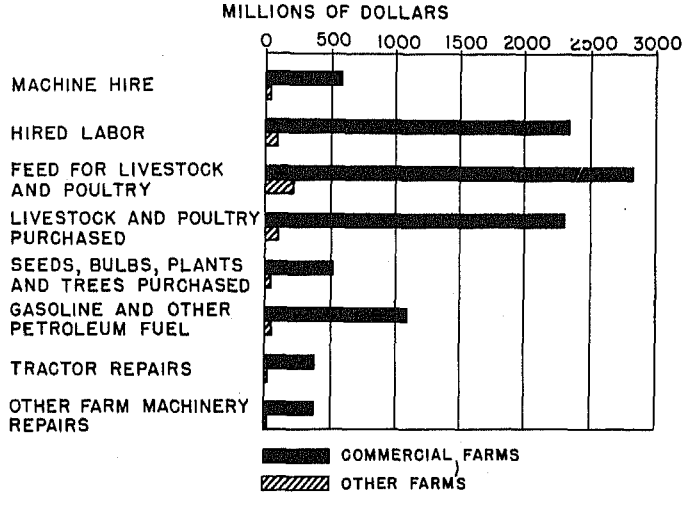
Board and room only.—Includes farms with reports of only "board and room," or "board and room" and "none."

Other only.—Includes farms with reports of only "other"; or "other" and "none."

House and other.—Includes farms with reports of "house" and "other"; "house" and "board and room"; "house," "other," and "none"; or "house," "board and room," and "none."

Board and room and other.—Includes farms with reports of "board and room" and "other"; or "board and room," "other," and "none."

No report.—Includes farms reporting workers for a given pay basis with no indication as to whether perquisites were furnished.



No information on perquisites furnished hired workers was obtained in any previous census except value of rent and board furnished in the Censuses of 1910 and 1920.

As a rule, workers paid on either a monthly or weekly basis are more likely to be employed regularly and are also more likely to receive some kind of perquisites than those paid on a daily, hourly, or piecework basis. The 1950 Census showed that, for 93.6 percent of the farms with workers paid on a monthly basis, some type of perquisite was furnished. This compares with 77.9 percent for farms with workers paid on a weekly basis, 61.6 percent for farms with workers paid on a daily basis, 40.5 percent for

farms with workers paid on an hourly basis, and 57.1 percent for farms with workers paid on a piecework basis.

Specified farm expenditures.—Information on farm expenditures for the year 1949 was obtained for eight specified items of expenditure for farm production, as follows: machine hire; hired labor; feed; livestock and poultry purchased; seeds, bulbs, plants, and trees; gasoline and other petroleum fuel and oil; tractor repairs; and other farm machinery repairs. Data relating to taxes and cash rent are presented in chapter V of this volume. Many items of expenditure for production were not included on the questionnaire, such as fertilizer, lime, containers, and spray materials; maintenance of buildings and fences, and other improvements; and interest, insurance, veterinary fees, grazing fees, irrigation charges, electricity, etc. Therefore, the sum of the specified expenditures reported will not represent a total of all farm expenditures for production. The total cannot be deducted from the total value of farm products sold to obtain a net farm income.

SPECIFIED FARM EXPENDITURES FOR COMMERCIAL FARMS AND OTHER FARMS, FOR THE UNITED STATES 1949

The Bureau of Agricultural Economics, U. S. Department of Agriculture, estimated the total production expenses of farm operators in the United States for 1949 to be $18,499,000,000. The expenditures for the eight specified items, as recorded by the census of agriculture, account for only about 60 percent of this total.

For tenant-operated farms, the expenditures reported were to include the amounts spent by both the tenant and the landlord. A farm operator who rented land to others was to report only the expenditures for the land he operated. Actually, for landlords operating farms on their own account, the landlord's expenditures were often reported by the landlord and not by the tenant. For this reason, the expenditures reported for tenants, particularly for croppers, may be low in relation to their operations while expenditures for full owners and part owners may be somewhat high.

The figures on expenditures are probably subject to considerable errors of response and to nonreporting. Many of the reports are probably based on memory and not on records. The inquiries were for the farm, but undoubtedly many farm operators reported in terms of their own outlays, as mentioned above. Most of the inquiries included a wide variety of items, expenditures for which may have been scattered throughout the year, making accurate totals difficult to estimate. If records were kept, they did not always provide for the particular categories called for by the Census. For example, some farmers did not keep a record of tractor repairs separately from other farm machinery repairs. An effort was made to word the inquiries in such manner that many respondents could use their Federal income tax returns as an aid in supplying the data for these expenditure items. However, a landlord who also operated a farm and incurred items of expense on his tenant's operation would have had to make an adjustment in the amount reported for his Census questionnaire. Also, a tenant who was required to report items of expense incurred by his landlord would have had to increase the amounts reported for his Census questionnaire.

One type of response error was the inclusion of expenditures for items other than those specified. Adequate correction of this type of error was possible only when the report specified the inclusion of such additional items.

Data for expenditures for earlier censuses are presented only for items included in the 1950 Census. Various items of expenditure have been obtained at each census of agriculture, beginning with 1870. The items of expenditure which have been included in one or more censuses of agriculture and the censuses for which they are included are as follows:

Machine hire—Census of 1950.
Hired labor—Censuses of 1870 to 1950, except 1935.
Feed for livestock and poultry—Censuses of 1909 to 1950, except 1935.
Livestock and poultry purchased—Censuses of 1950 and 1945.
Seeds, bulbs, plants, and trees—Censuses of 1950 and 1945.
Gasoline and other petroleum fuel and oil—Censuses of 1950 and 1940.
Tractor repairs—Census of 1950.
Other machinery repairs—Census of 1950.
Fertilizer—Censuses of 1880 to 1945, except 1925 and 1935.
Lime—Censuses of 1940 and 1945.
Fences (building and repairs)—Censuses of 1890 and 1880.
Lumber, timber, wooden posts, poles, and firewood—Census of 1925.
Building materials—Census of 1940.
Purchase of farm implements and machinery—Censuses of 1940 and 1930.
Electric power—Census of 1930.

Except for labor, which included value of board furnished in 1900 and in three earlier censuses, there have been only minor changes in the wording of the inquiries from census to census for the items of expenditures for which data are available for earlier years and included in the 1950 Census.

Changes from census to census in the amounts expended for any specified item may reflect changes in amounts purchased, changes in prices, or changes in definition. A comparison of expenditures and the index numbers of prices paid by farmers for certain commodities used in production and of wage rates, shows that the major changes in the expenditures from census to census have been due to changes in the price level.

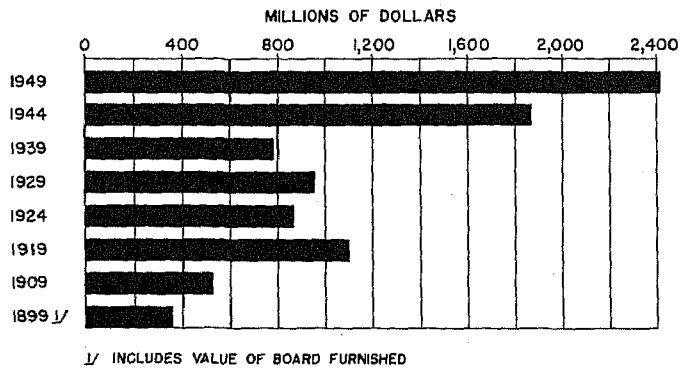
INDEX NUMBERS OF PRICES PAID BY FARMERS FOR SPECIFIED COMMODITIES BOUGHT FOR USE IN PRODUCTION AND OF FARM WAGE RATES, FOR THE UNITED STATES: 1910 TO 1949

[Calendar years 1910-14=100]

Year	Commodities bought for use in production			Farm wage rates
	Livestock	Feed	All commodities	
1949	344	206	238	430
1944	202	173	173	328
1939	139	93	121	129
1929	177	136	146	187
1924	116	139	140	181
1919	183	208	195	206
1910	92	98	97	96

Source: U. S. Department of Agriculture, Bureau of Agricultural Economics, *Agricultural Statistics*, 1950 and 1951.

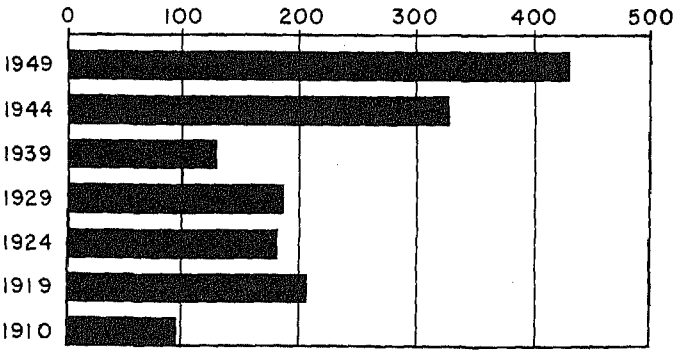
Expenditures for machine hire.—Expenditures for machine hire were to include any labor included in the cost of such machine hire. Machine hire refers to custom machine work, such as tractor hire, threshing, combining, silo filling, baling, ginning, plowing, and spraying. If part of the farm product was given as pay for machine hire, the value of the product traded for this service was to be included in the amount of expenditures reported. The cost of trucking, freight, and express was not to be included. No data for this item have been obtained in any previous census.



Expenditures for hired labor.—In reporting the amount spent for hired labor, only cash payments were to be included. The kinds of perquisites furnished, if any, to supplement the cash wages were to be reported separately, as explained before, but the value of these perquisites was not obtained. Expenditures for housework and contract construction work were not to be included.

An inquiry to obtain the expenditures for farm labor has been included in each census, excepting 1935, beginning with 1870. However, no figures on expenditures for farm labor appear in the 1880 and 1890 reports. From 1870 to 1900, the inquiry called for the amount paid for farm labor, including the value of board furnished. For 1910 and 1920, separate figures were obtained for cash expenditures and for the estimated value of rent and board furnished farm laborers. In the Censuses of 1950, 1945, 1940, 1930, and 1925, there was only one inquiry to obtain the cash expended for farm labor. Beginning with 1900, the inquiry in each census has excluded housework. Contract construction work and expenditures for machine hire and for labor included in the cost of such machine hire were expressly excluded for the 1950, 1945, and 1940 Censuses.

Specific mention of the inclusion of expenditures for contract and piecework labor was made in both the 1940 and 1945 inquiries. The questionnaire and instructions for 1950 did not specifically call for the inclusion of expenditures for contract and piecework labor. However, it did provide for reporting the number of hired farm workers that were paid on a piecework basis.



Next to feed for livestock and poultry, the amount expended for hired labor was the largest of any of the specified expenditures reported by the Census. About one-half of the farms in the United States reported $2,418,460,857 spent for hired labor in 1949. According to the accompanying chart, the Censuses of 1950 and 1945 showed significant increases over previous censuses in the cost of labor. The amount of expenditures in 1949 was more than three times the amount reported for 1939, but there was a decline in the number of hired workers on farms during specified weeks. Most of the increase in the expenses for hired labor can be attributed to the higher wage rates received by farm workers. This is apparent when a comparison is made between the amount expended for hired labor and the index of farm wage rates. The two accompanying bar charts show that the change in wage rates from one census year to another closely paralleled the percentage change in total expenditures for hired labor.

CASH EXPENDITURES FOR HIRED LABOR ON FARMS, FOR THE UNITED STATES: 1899 TO 1949

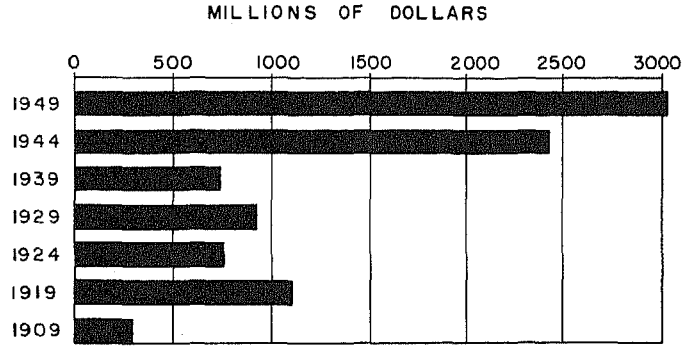
1/ INCLUDES VALUE OF BOARD FURNISHED

INDEX NUMBERS OF AVERAGE FARM-WAGE RATES FOR THE UNITED STATES: 1910 TO 1949

SOURCE FOR INDEX NUMBERS: BUREAU OF AGRICULTURAL EGONOMICS, U. S. DEPARTMENT OF AGRICULTURE

Both numbers of hired workers and expenditures for hired workers show heavy concentrations in the more intensive fruit- and vegetable-producing areas and in a few other areas producing specialized crops. Livestock ranches also require large amounts of hired labor. In the Mountain Division, the percentage of farms reporting expenditures for hired labor was higher than for any other geographic division, and, with the exceptions of the New England and the Pacific Divisions, the Mountain Division had higher expenditures per farm reporting than the other geographic divisions. In the North Central States, the percentage of farms reporting expenditures for labor was high, but the average amount per farm reporting was low. This is an area where agriculture is highly mechanized and farms are of such size and type that the average farm family can operate them successfully with a limited amount of hired help. In most areas of the South, the size and type of farm operations are such that little or no hired help is used on a large proportion of the farms.

Expenditures for feed for livestock and poultry.—Expenditures for feed were to include expenditures for pasture, salt, condiments, concentrates, and mineral supplements, as well as for grain, hay, and mill feeds. Expenditures for grinding and mixing feeds were also to be included. Expenditures made by a tenant to his landlord for feed grown on the land rented by the tenant were not to be included.



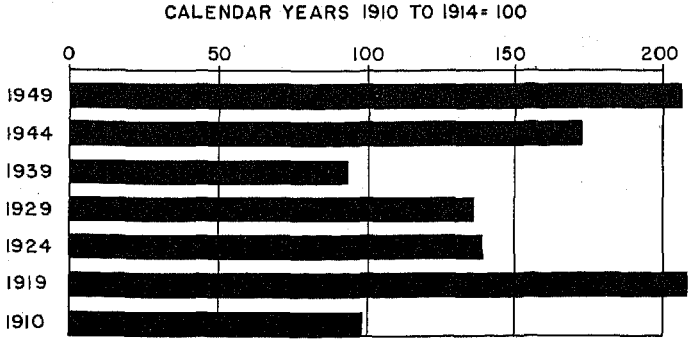
Information on cost of feed purchased has been obtained, except for 1935, in every census beginning with 1910. Changes in the wording of the inquiry and in the instructions to enumerators for this item have been of such a minor nature that the comparability of the statistics should not be appreciably affected.

Expenditures in 1949 for feed for livestock and poultry amounted to over 3 billion dollars. More farm operators reported this item than any of the other specified expenditure items included on the questionnaire. The cost of purchased feed in 1949 amounted to more than four times the amount reported for 1939. The major reason for this increase was the rise in the unit price of feed. This is shown by the two charts on trends in total cost of feed and the index of prices paid by farmers for feed. Another important factor was the increase in the proportion of all farm operators reporting expenditures for feed, 54.8 percent in 1939, as compared with 72.9 and 72.0 percent in 1944 and 1949,

respectively. The South showed the highest percentage increase from 1939 to 1949 in farms reporting expenditures for feed, the percentages increasing from 41.7 in 1939 to 63.6 in 1949. Expenditures for feed per farm reporting in 1949 were heaviest in the New England, Middle Atlantic, and Pacific Divisions. These areas are relatively important in dairy and poultry production, and do not produce enough feed grains for their own needs. Consequently, large amounts of grain feed must be brought into these areas. In the East and West North Central Divisions, total purchases of feed were large but the amount per farm reporting was much lower than in the New England, Middle Atlantic, and Pacific Divisions, primarily because of the large quantity of feed grains produced on farms in the East and West North Central Divisions.

Expenditures for livestock and poultry purchased.—Expenditures for purchase of livestock and poultry were to include amounts spent for purchase of baby chicks, poults, chickens, turkeys, domestic rabbits, fur-bearing animals kept in captivity, and bees, as well as the amounts spent for purchase of horses, mules, cattle,

EXPENDITURES FOR FEED FOR LIVESTOCK AND POULTRY, FOR THE UNITED STATES: 1909 TO 1949



hogs, sheep, and goats. Expenditures for purchase of livestock for immediate resale were not to be included.

The Census of 1945 was the only previous census in which information was obtained for expenditures for the purchase of livestock and poultry. Since the instructions covering this item were essentially the same for both census years, the data should be comparable.

In 1949, expenditures for the purchase of livestock and poultry amounting to $2,389,809,254 were reported by 54.8 percent of all farms. In comparison, 47.2 percent of all farms reported only $1,317,441,017 for this item in 1944. The sizable increase in the

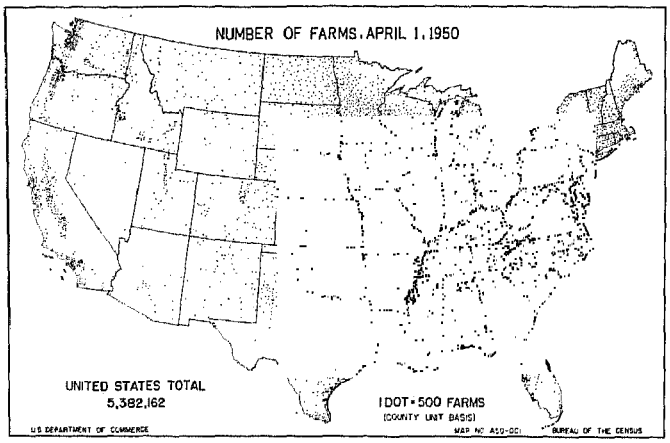
INDEX NUMBERS OF PRICES PAID BY FARMERS FOR FEED FOR LIVESTOCK AND POULTRY, FOR THE UNITED STATES: 1910 TO 1949

SOURCE FOR INDEX NUMBERS: BUREAU OF AGRICULTURAL ECONOMICS, UNITED STATES DEPARTMENT OF AGRICULTURE

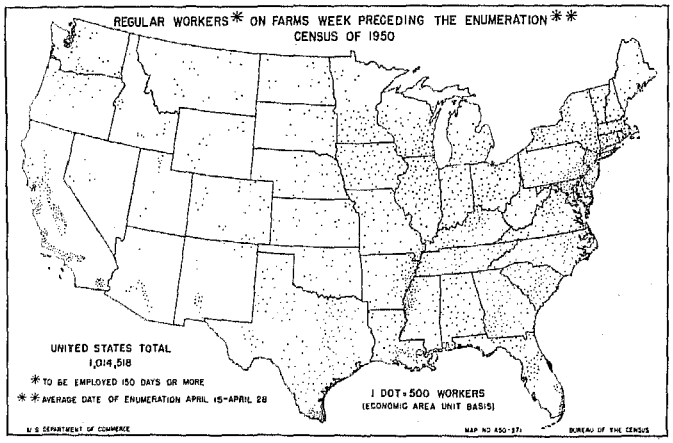
outlay for purchase of livestock and poultry between the two census years was due primarily to the change in prices rather than to other factors. From 1944 to 1949, the index of prices paid for livestock by farmers increased 70 percent compared with an increase of 81 percent in the amount expended as reported to the Census. Purchases of larger numbers of livestock in 1949 compared with 1944 may also account for some of the increased expenditures. The percentage of farms reporting purchases of livestock and poultry was highest in the East and West North Central Divisions, while the expenditures per farm reporting were highest in the West North Central, Mountain, and Pacific Divisions, where most of the livestock-feeding operations are found.

Expenditures for seeds, bulbs, plants, and trees purchased.—Expenditures for seeds, bulbs, plants, and trees purchased were to include only the cash outlay. The only previous census when similar information was obtained was the 1945 Census. Since the inquiry for both years called for the expenditures for the same items, the data should be comparable.

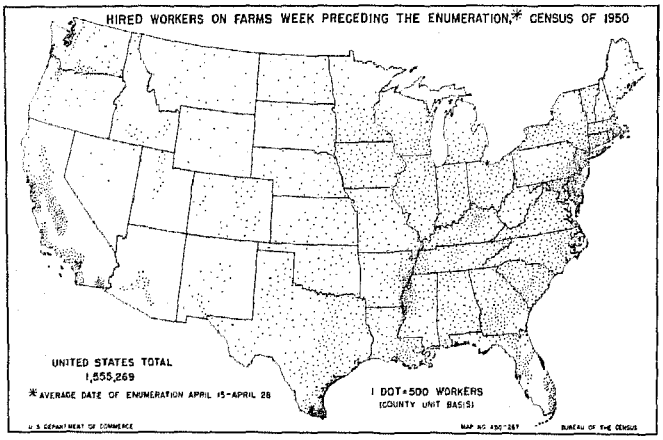
A comparison between the expenditures for 1944 and 1949 shows, as for most of the other expense items, a large increase, 83.2 percent, during this 5-year period. The average expenditure per farm reporting was $99 in 1944 and $163 in 1949.



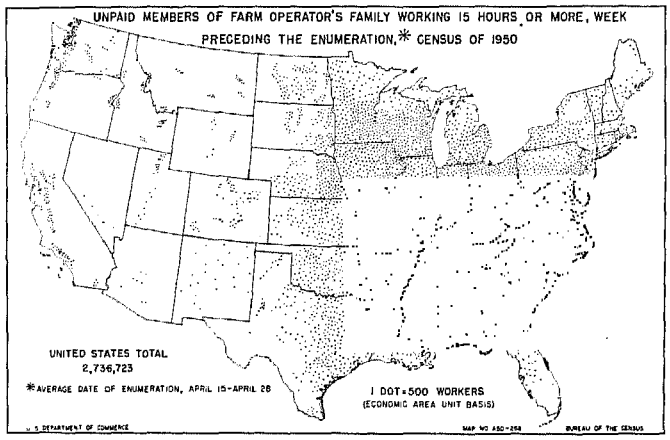
Expenditures for gasoline and other petroleum fuel and oil.—The inquiry specified gasoline and other petroleum fuel and oil for the farm business. The instructions specified the inclusion of gasoline, butane, propane, kerosene, fuel oil, lubricating oils, and other petroleum fuels and oils used in the farm business. Gasoline and oil for the family automobile when used for the farm business were to be included. Butane, propane ,kerosene, fuel oil, or other petroleum products used exclusively in the farm home for heating, cooking, and lighting, were not to be included.



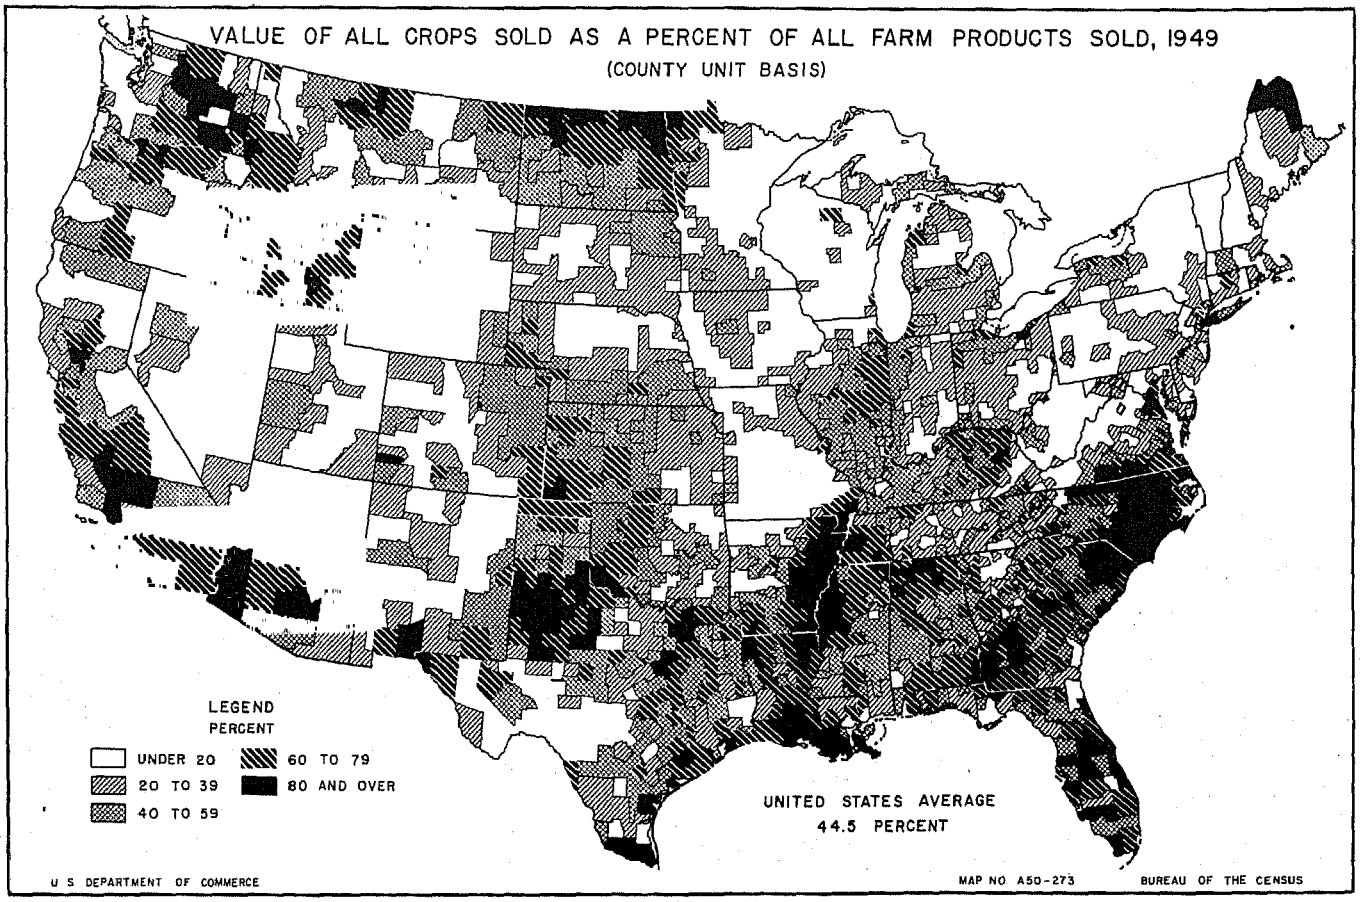
Similar information was obtained previously only in the 1940 Census. The instructions for that year specified "used on this farm" but did not specifically mention "for the farm business."



A comparison of the 1939 and 1949 figures shows only a slight increase in the proportion of farms reporting expenditures for gasoline and other petroleum fuel and oil, from 47.3 to 55.5 percent. The amount expended per farm reporting increased from $112 to $380 in the 10-year period. Higher prices and increased mechanization both were factors in the changing cost for this item. In 1940, there were 1,567,430 tractors reported compared with 3,617,001 in 1950, an increase of 131 percent in the 10-year period. Total expenditures for different parts of the country were closely associated with the concentration of tractors and the size of the farming operations, being highest in the North Central and Northeastern States and lowest in the Southern States.



Expenditures for farm machinery repairs.—Expenditures for tractor repairs and other farm machinery repairs were to include the amount spent for repairing (both labor and parts) and the amount spent for repair parts, tires, tubes, batteries, and other replacement parts. Expenditures for plowshares, blacksmithing, and the like were to be included. Expenditures for motortruck and automobile repairs were not to be included. Amounts spent for purchase or replacement of entire units of equipment were not to be included. Expenditures for repair of machinery and equipment not used in the farm business were also to be excluded. Comparable data for these items were not obtained in any previous Census of Agriculture. Cost of tractor repairs and replacement parts reported for 1949 amounted to a little less than 400 million dollars for the United States. Most of this was concentrated in the Middle Atlantic, East North Central, and West North Central States.



Only 43.4 percent of all farms reported farm machinery repairs other than for tractors, automobiles, and trucks, amounting to $165 per farm reporting.

Table 2.—WORKERS ON FARMS DURING SPECIFIED WEEKS, FOR THE UNITED STATES: 1935 TO 1950

[For 1950, figures for number of workers are for the week preceding the enumeration. For average date of enumeration, see table in Introduction. *All 1950 data and data for hired workers by number employed for 1945 are based on reports for only a sample of farms. See text.* Figures for divisions and States in tables 11, 12, 13, and 14]

[1]Includes farms reporting "house and board and room," and "house, board and room, and other."

Table 4.—WAGE RATES AND PERQUISITES FURNISHED HIRED WORKERS BY BASIS OF PAYMENT AND BY SIZE OF FARM, FOR THE UNITED STATES, THE NORTH, THE SOUTH, AND THE WEST: 1950—Continued

[Figures on wage rates and perquisites are for hired persons working the week preceding the enumeration. For average date of enumeration, see table in Introduction. Data are based on reports for only a sample of farms. See text. Data for States are shown in Volume I, parts 1 to 33]

Item	Total all farms	Size of farm											
		Under 10 acres	10-29 acres	30-49 acres	50-69 acres	70-99 acres	100-139 acres	140-179 acres	180-219 acres	220-259 acres	260-499 acres	500-999 acres	1,000 acres and over

Table 5.—WAGE RATES AND PERQUISITES FURNISHED HIRED WORKERS BY BASIS OF PAYMENT AND BY TENURE OF OPERATOR (COLOR AND TENURE FOR THE SOUTH), FOR THE UNITED STATES, THE NORTH, THE SOUTH, AND THE WEST: 1950—Continued

[Figures on wage rates and perquisites are for hired persons working the week preceding the enumeration. For average date of enumeration, see table in Introduction. Data are based on reports for only a sample of farms. See text. Data for States are shown in Volume I, parts 1 to 33]

Item	Total all farms	Commercial farms by tenure of operator									Other farms (part-time, residential, abnormal)
		Full owners	Part owners	Managers	Tenants						
					All	Cash	Share-cash	Crop-share tenants and croppers	Live-stock-share	Croppers[1] (South only)	Other and unspecified
THE NORTH

Table 5.—WAGE RATES AND PERQUISITES FURNISHED HIRED WORKERS BY BASIS OF PAYMENT AND BY TENURE OF OPERATOR (COLOR AND TENURE FOR THE SOUTH), FOR THE UNITED STATES, THE NORTH, THE SOUTH, AND THE WEST: 1950—Continued

[Figures on wage rates and perquisites are for hired persons working the week preceding the enumeration. For average date of enumeration, see table in Introduction. Data are based on reports for only a sample of farms. See text. Data for States are shown in Volume I, parts 1 to 33]

Item	Total all farms	Commercial farms by tenure of operator									Other farms (part-time, residential, abnormal)
		Full owners	Part owners	Managers	Tenants						
					All	Cash	Share-cash	Crop-share tenants and croppers	Live-stock-share	Croppers[1] (South only)	Other and unspecified
THE SOUTH											
For Farms of Nonwhite Operators

Table 6.—WAGE RATES AND PERQUISITES FURNISHED HIRED WORKERS BY BASIS OF PAYMENT AND BY TYPE OF FARM, FOR THE UNITED STATES, THE NORTH, THE SOUTH, AND THE WEST: 1950—Continued

[*Figures on* wage rates and perquisites are for hired persons working the week preceding the enumeration. For average date of enumeration, see table in Introduction. Data are based on reports for only a sample of farms. See text. Data for States are shown in Volume I, parts 1 to 33]

See footnote at end of table.

Table 7.—WAGE RATES AND PERQUISITES FURNISHED HIRED WORKERS BY BASIS OF PAYMENT AND BY ECONOMIC CLASS, FOR THE UNITED STATES, THE NORTH, THE SOUTH, AND THE WEST: 1950—Continued

[Figures on wage rates and perquisites are for hired persons working the week preceding the enumeration. For average date of enumeration, see table in Introduction. Data are based on reports for only a sample of farms. See text. Data for States are shown in Volume I, parts 1 to 33]

*Not available.

[1] Many expense items are not included such as fertilizer and lime, maintenance of buildings, taxes, mortgage interest, insurance, rents, containers, veterinary fees, and others of varying degrees of importance. The specified expenditures, shown in this table, amounted to approximately 60 percent of all farm production costs for 1949 according to estimates of the United States Department of Agriculture.

[2] For the farm business.

[3] Amount spent for repairing (both labor and parts) and the amount spent for repair parts and other replacement parts; does not include motortruck and automobile repairs.

[4] For average date of enumeration see table in Introduction.

[5] 0.05 percent or less.

Table 9.—SPECIFIED FARM EXPENDITURES, FOR THE UNITED STATES: 1869 TO 1949

[All 1950 data and data for livestock and poultry purchased and for seeds, bulbs, plants, and trees purchased for 1945 are based on reports for only a sample of farms. See text. Figures for divisions and States in tables 17, 18, and 19]

[1]Housework and contract construction work not included. For 1950, operators who worked 1 or more hours, hired workers who worked any time during specified week, and unpaid members of operator's family who worked 15 hours or more at farm work. For 1945 and 1940, persons 14 years old and over who worked at farm work the equivalent of 2 or more days during the specified week. For 1935, persons who worked at farm work the equivalent of 2 or more days during the specified week. [2]For average date of enumeration see table in Introduction. [3]Data for the District of Columbia not included in totals.

WEEKS; BY DIVISIONS AND STATES: 1935 TO 1950

for only a sample of farms. See text]

Family workers (operator and unpaid members of his family)—Con.		Hired workers																		
Number of persons working—Con.		Farms reporting								Number of persons working				Average number of persons working during specified weeks per farm reporting						
														Family and/or hired workers				Hired workers		
First week of January		Week preceding enumeration 1950	Last week of March, 1940	First week of January		Percent of all farms				Week preceding enumeration,[2] 1950	Last week of March, 1940	First week of January

Table 15.—HIRED WORKERS BY BASIS OF PAYMENT, WAGE RATES, AND PERQUISITES FURNISHED; BY DIVISIONS AND STATES: 1950—Continued

Part 5 of 5: Workers Paid on a Piece-Work Basis.

[Figures are for hired persons working the week preceding the enumeration. For average date of enumeration, see table in Introduction. Data are based on reports for only a sample of farms. See text]

	Region, division, and State	One or more hired workers paid on a piece-work basis										Only 1 hired worker paid on a piece-work basis								No report as to basis of payment	
		Farms reporting		Persons working		Farms reporting specified perquisites						Farms reporting		Farms reporting specified perquisites

* Not available.

[1] Includes farms reporting "house and board and room," and "house, board and room, and other."

Table 16.—WAGE RATES BY PERQUISITES FURNISHED, BY DIVISIONS AND STATES: 1950

[Figures are for hired persons working the week preceding the enumeration. For average date of enumeration see table in Introduction. Data are based on reports for only a sample of farms. See text]

	Region, division, and State	Workers paid on a monthly basis										Workers paid on a weekly basis									
		Average per person per month		Median monthly wage rate per farm reporting (dollars)								Average per person per week		Median weekly wage rate per farm reporting (dollars)							
					Perquisites furnished[1]										Perquisites furnished[1]						
		Hours worked	Wage rate (dol.)	All farms	None	House only	Board and room only	Other only	House and other[2]	Board and room and other	No report as to perquisites furnished	Hours worked	Wage rate (dol.)	All farms	None	House only	Board and room only	Other only	House and other[2]	Board and room and other	No report as to perquisites furnished

*Not available. [1]See table 15 for number of farms reporting each type of perquisites furnished. [2]Includes farms reporting "house and board and room," and "house, board and room, and other." [3]Median not shown where less than 50 farms reporting. [4]$7.50 or over. [5]$1.00 or more.

Table 17.—SPECIFIED FARM EXPENDITURES, BY DIVISIONS AND STATES: 1949, 1944, AND 1939

[Not included in this table are many expense items such as fertilizer and lime, maintenance of buildings, taxes, mortgage interest, insurance, rents, containers, veterinary fees, and others of varying degrees of importance. The specified expenditures shown in this table amounted to approximately 60 percent of all farm production costs for 1949 according to estimates of the United States Department of Agriculture. See table 18 for percent of all farms reporting and table 19 for average per farm reporting. All 1949 data and data for livestock and poultry purchased, and seeds, bulbs, plants, and trees purchased for 1944 are based on reports for only a sample of farms. See text]

*Not available. [1]Amount spent for repairing (both labor and parts) and the amount spent for repair parts and other replacement parts; does not include motortruck and automobile repairs. [2]Data for the District of Columbia not included in totals.

AND STATES: 1949, 1944, AND 1939—Continued

and others of varying degrees of importance. The specified expenditures shown in this table amounted to approximately 60 percent of all farm production costs for 1949 according and data for livestock and poultry purchased, and seeds, bulbs, plants, and trees purchased for 1944 are based on reports for only a sample of farms. See text]

Seeds, bulbs, plants, and trees purchased				Gasoline and other petroleum fuel and oil for the farm business				Farm machinery repairs, 1949[1]
