CHAPTER VI.—LIVESTOCK AND LIVESTOCK PRODUCTS

Introduction.—This chapter presents data relating to livestock and livestock products collected in the 1950 Census of Agriculture. The data include the numbers of livestock and poultry on farms as of April 1, 1950, the amount and value of each important livestock and poultry product sold in 1949, with the number and value of each principal kind of livestock sold alive, and the number of the principal kinds of livestock slaughtered on farms. A limited amount of data relating to past, current, and potential production was obtained for several livestock items. The information regarding inventory of livestock and poultry includes data by age and sex groups for the more important kinds of livestock. This chapter also presents data on bees and the value of sales of honey, bees, wax, etc.

Sources of data.—The data presented are from the 1950 Census of Agriculture with comparable data from earlier censuses. In 1950, the information regarding livestock and livestock products was obtained for all farms. The 1950 data given in this chapter represent, in most cases, totals obtained by adding reports for all farms. However, for a few items, estimates are presented based upon reports for a sample of farms. A few of the figures from the 1945 Census, which are presented in this chapter, are also based on reports for a sample of farms. Such data appear in table 13, relating to farm work power; and in table 40, relating to farms reporting chickens on hand by size of flock. The 1950 sample data were based on reports for all farms designated as "large farms" and on approximately 20 percent of the remainder. (See Introduction to this volume for a description of large farms.) The 1945 sample data were based on reports for all large farms, classified substantially as in 1950, and on about 5 percent of the remainder. Headnotes for the tables will indicate when the data represent estimates based upon reports for a sample of the farms.

Data regarding the reliability of estimates based on reports for only a sample of farms are given in the Introduction to this volume.

Presentation of statistics.—Statistics are presented for the United States, three major regions, nine geographic divisions, and for individual States for most items. In most cases, comparable data are given for the 1945 and prior censuses.

Other published data.—Not all available data on livestock and livestock products are presented in this chapter. Chapters X, XI, XII, and XIII of this volume present data on livestock and livestock products for farms classified by size of farm, by color and tenure of operator, by economic class of farm, and by type of farm, respectively. Some of the data presented in those chapters represent totals for "commercial farms" and totals for "other farms." Also, data are presented therein for the number of dairy farms, for the number of poultry farms, and for the number of livestock farms other than dairy and poultry (each type representing farms having 50 percent or more of the total sales derived from the sale of the product or products from which the type name was derived).

Most of the data shown by States in this chapter appear also in Volume I either by counties or by State economic areas. State Table 13 of Volume I presents data for large farms. It gives the number of dairy farms, poultry farms, and livestock farms other than dairy and poultry. This table also shows some livestock inventories and sales, with percentages of the totals for all farms

represented by the totals for large farms. Data for large farms are presented separately in the Introduction to Volume II.

Totals for the number of cows milked yesterday (the day preceding the enumeration), as presented in table 22 of this chapter, represent a tabulation of the reports for all farms. The correlated totals for farms reporting cows milked yesterday, and for gallons of milk produced yesterday are not presented in this chapter but are shown in Volume I. However, estimated totals, based on a sample of the reports, are shown in table 25 of this chapter for all three items.

Also in table 25 is a count of the farms which did not report milk cows. These totals were derived by subtracting the number of farms reporting milk cows from the total number of farms. These counts of farms reporting no milk cows differ from those shown in Economic Area Table 3 of Volume I in that the totals in volume I represent farms which had no milk cows on hand on the day preceding the enumeration in 1950 but which sold dairy products of some kind in 1949.

Comparability of statistics.—Differences in the wording of the questions, and in the age and sex classifications for the various censuses, which affect the comparability of the data for livestock, are given in tables 1, 2, and 3. Frequent reference to these tables is recommended in comparing the data for one census against those for another.

Table 1 presents a description of the various livestock inventory items and the number for each census from 1900 to 1950. This table provides a brief description for each inventory item for the 1950 Census and indicates for which items there are available data reasonably comparable with the data for 1950. For some censuses, the inventory, taken in connection with the census, excluded young animals. The exclusion of young animals should be considered when comparing the total number of livestock for the various censuses. Actual figures are shown for items for which data are reasonably comparable with those for 1950.

Table 2 shows, for each livestock item, the number of farms reporting and the inventory number for age and sex groups for which separate data have been published for each census from 1840 to 1950. Table 3 provides a list of all livestock and livestock products for which data are available for each census from 1840 to 1950.

Table 4 presents data for 1950 and for each census for which reasonably comparable data are available for various items relating to livestock production and sales.

Comparability of data for livestock from census to census is affected by the season of the year when the census is taken and also by the relationship of the date of the census to the livestock cycle. Four different months have been used as the census date since 1840. For the censuses from 1840 through 1900, the census was taken as of June 1. The date for the 1910 Census was April 15. The date of the censuses of 1920, 1925, 1935, and 1945, was January 1, and for 1930, 1940, and 1950, April 1. Considerable numbers of livestock are marketed between January and April or June. Likewise, a number of animals die during the period from January to April or June. On the other hand, for some kinds of livestock, a relatively large number of animals are born

between January and April or June. For many of the censuses, data have been secured on the number of animals on hand at the time of the census that had been born between January 1 and the census date, in order to provide a method for obtaining a more accurate comparison of the number of each kind of livestock for the various censuses.

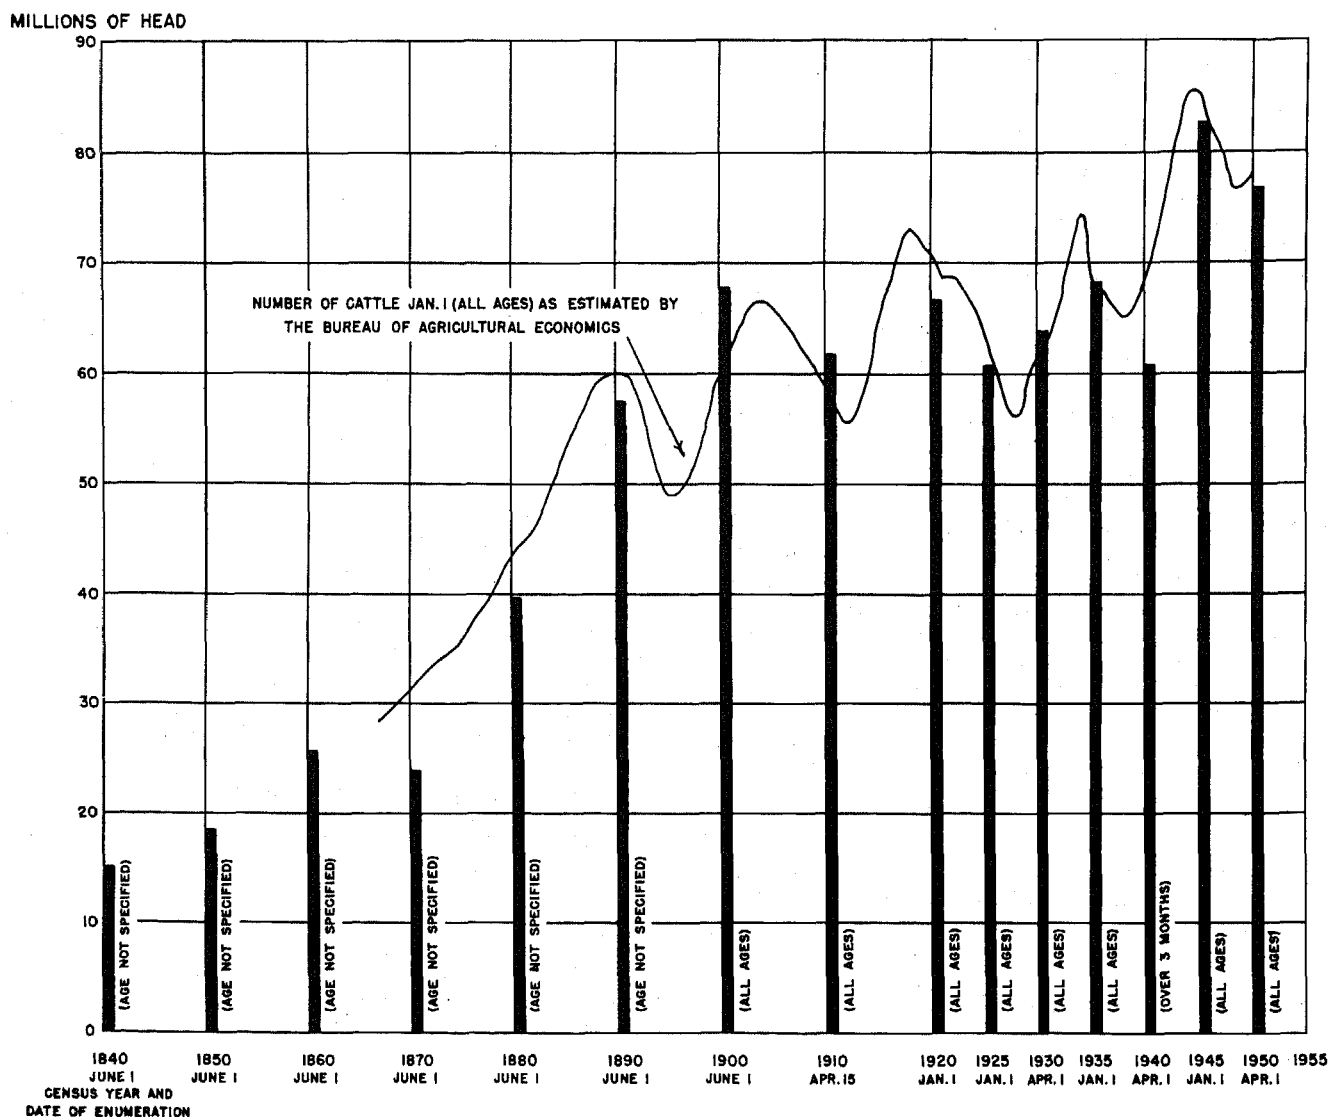

While the inquiries and instructions indicated that the inventory numbers of livestock were to be reported as of the census date, it is known that there has been a tendency of the farm operator to report the number of livestock on his farm at the time actual enumeration occurs. Therefore, it is necessary to consider the date of actual enumeration when making comparisons between censuses or in comparing data from other sources with those of the census in regard to the numbers of livestock. The average date of enumeration for 1950 is shown in table 27.

The numbers of most kinds of livestock are affected by changes in supply, demand, and other economic conditions. These changes in economic conditions result in increases followed by decreases in the number of livestock in accordance with a rather definite

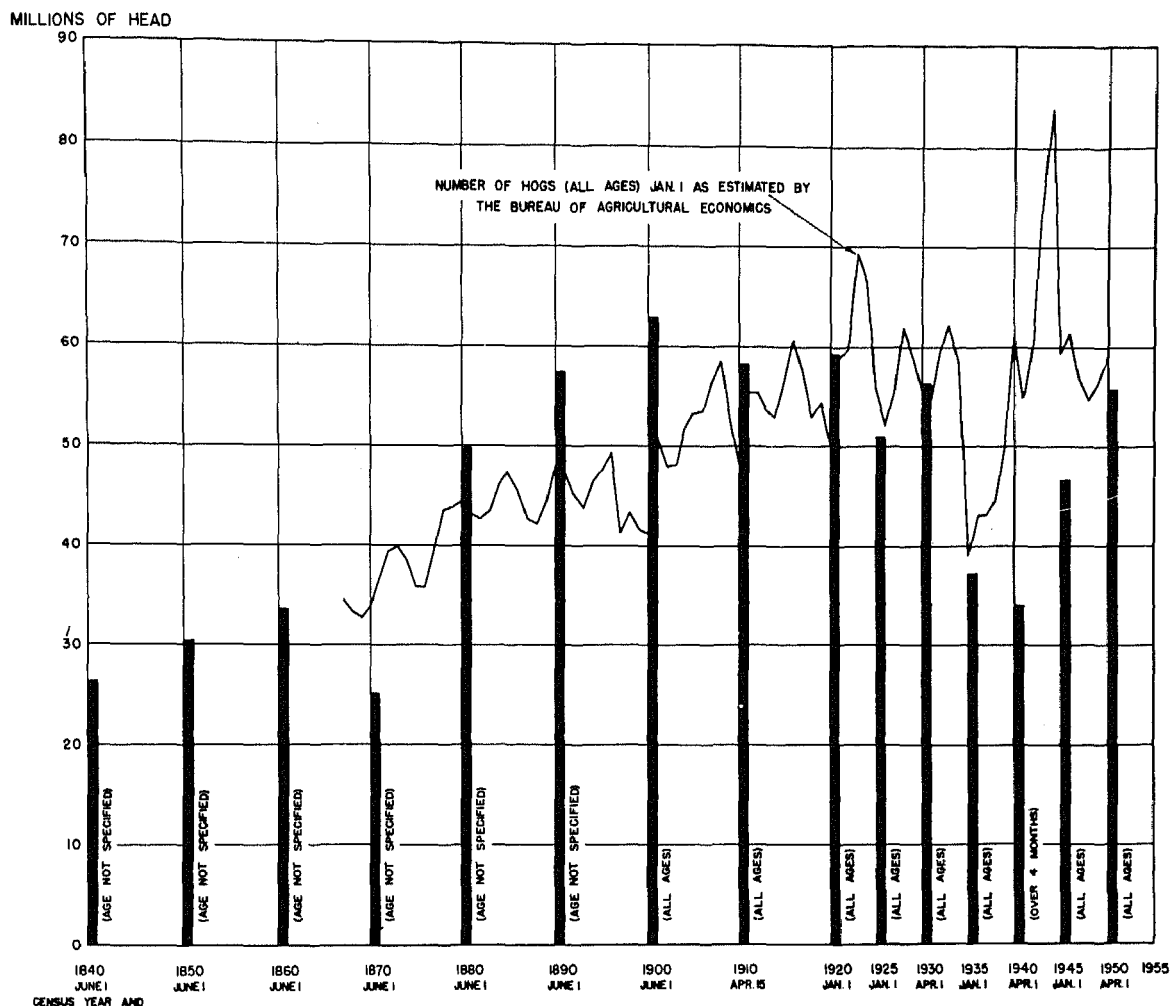

pattern or cycle. The number of livestock shown for a census is affected by the point in the livestock cycle at which the census is taken. The bar charts in this chapter showing the number of cattle, hogs, and sheep indicate graphically the annual changes in the number of each of these three kinds of livestock, as estimated by the Bureau of Agricultural Economics of the U. S. Department of Agriculture. These charts indicate the cyclical change in the number of animals and also the point in the cycle at which the census was taken.

Method of handling problems for the enumeration of livestock and livestock products.—Several problems arise in connection with the enumeration of livestock on farms. Some livestock ranches cover large areas and their operations extend into more than one county. Most of these ranches qualified as large farms and hence were listed on large farm lists prepared in advance of the census. The enumeration of these large farms was checked in the field and again during the office processing in Washington. This procedure helped to insure the complete enumeration of large farms.

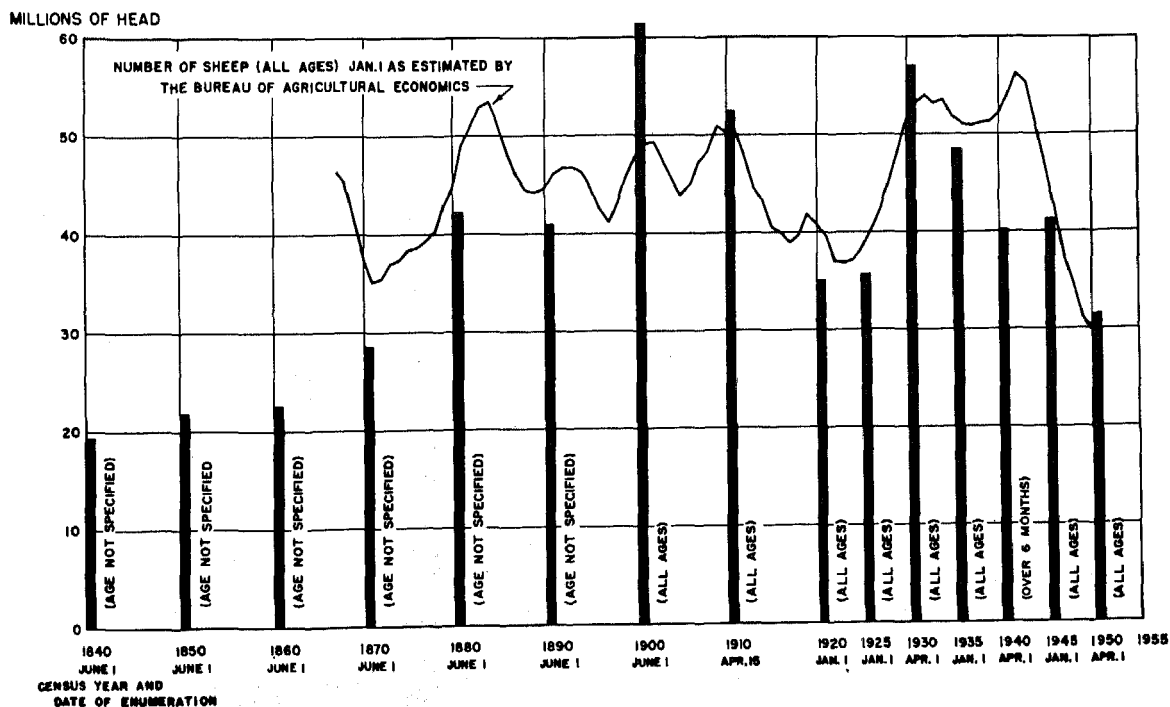

CATTLE—NUMBER SHOWN BY THE CENSUS ON SPECIFIED DATES OF ENUMERATION IN RELATION TO CYCLICAL CHANGES INDICATED BY ANNUAL ESTIMATES OF JANUARY 1 INVENTORIES BY BUREAU OF AGRICULTURAL ECONOMICS, FOR THE UNITED STATES

HOGS—NUMBER SHOWN BY THE CENSUS ON SPECIFIED DATES OF ENUMERATION IN RELATION TO CYCLICAL CHANGES INDICATED BY ANNUAL ESTIMATES OF JANUARY 1 INVENTORIES BY BUREAU OF AGRICULTURAL ECONOMICS, FOR THE UNITED STATES

SHEEP—NUMBER SHOWN BY THE CENSUS ON SPECIFIED DATES OF ENUMERATION IN RELATION TO CYCLICAL CHANGES INDICATED BY ANNUAL ESTIMATES OF JANUARY 1 INVENTORIES BY BUREAU OF AGRICULTURAL ECONOMICS, FOR THE UNITED STATES

Enumerators and respondents were instructed to enumerate livestock on the farm or ranch on which such livestock was kept at the time of the census. This procedure provided for the counting of livestock on a farm operated by a person other than the owner of the livestock. In general, all livestock sold were to be reported for the farm from which they were sold, regardless of whether sold by the farm operator or by someone else. While these procedures may have resulted in missing some livestock, particularly the sales of some livestock, it is the only practical method of insuring as nearly as possible the complete enumeration of all livestock or sales of livestock.

In case the farm operator in 1950 was not operating the same farm as in 1949, he was asked to report the sales of livestock and livestock products for the farm he operated in 1949, and if he did not operate a farm in 1949, to estimate the sales of livestock and livestock products in 1949 for the farm which he was operating in 1950. While this procedure may have not secured a fully complete enumeration of the sales of livestock and livestock products, it provided for as nearly a complete enumeration of these farm products as possible.

DEFINITIONS AND EXPLANATIONS

Reference should be made to the Introduction to this volume for definitions of a farm, farms reporting, type of farm, etc. The Introduction also contains an explanation of the methods used in obtaining and compiling the data and an appraisal of the census.

"Livestock" as used in this chapter includes not only domestic animals usually found on farms, but also fur-bearing animals kept in captivity, domestic rabbits, poultry, and bees. When the terms "cattle," "hogs," "sheep," etc., appear in the tables without qualification as to age or sex, the terms refer to animals of all ages.

Value of inventory and value of sales.—Two series of values relating to livestock and livestock products appear in this chapter. One series of values relates to the inventory value of the various kinds of livestock on hand at the time of the census. These values were obtained by multiplying the number of each kind or age group of animals enumerated for a county by an average value per head. The average value per head was compiled for the Bureau of the Census by the Bureau of Agricultural Economics of the U. S. Department of Agriculture. These average values were based upon reports obtained from a sample of farmers, livestock buyers, livestock dealers, etc. The averages were computed for groups of counties, grouped on the basis of crop-reporting or price-reporting districts used by the Bureau of Agricultural Economics. State totals for the value of each kind of livestock were obtained by adding totals for the counties in the State. State average values were computed by dividing the State total value by the number of animals.

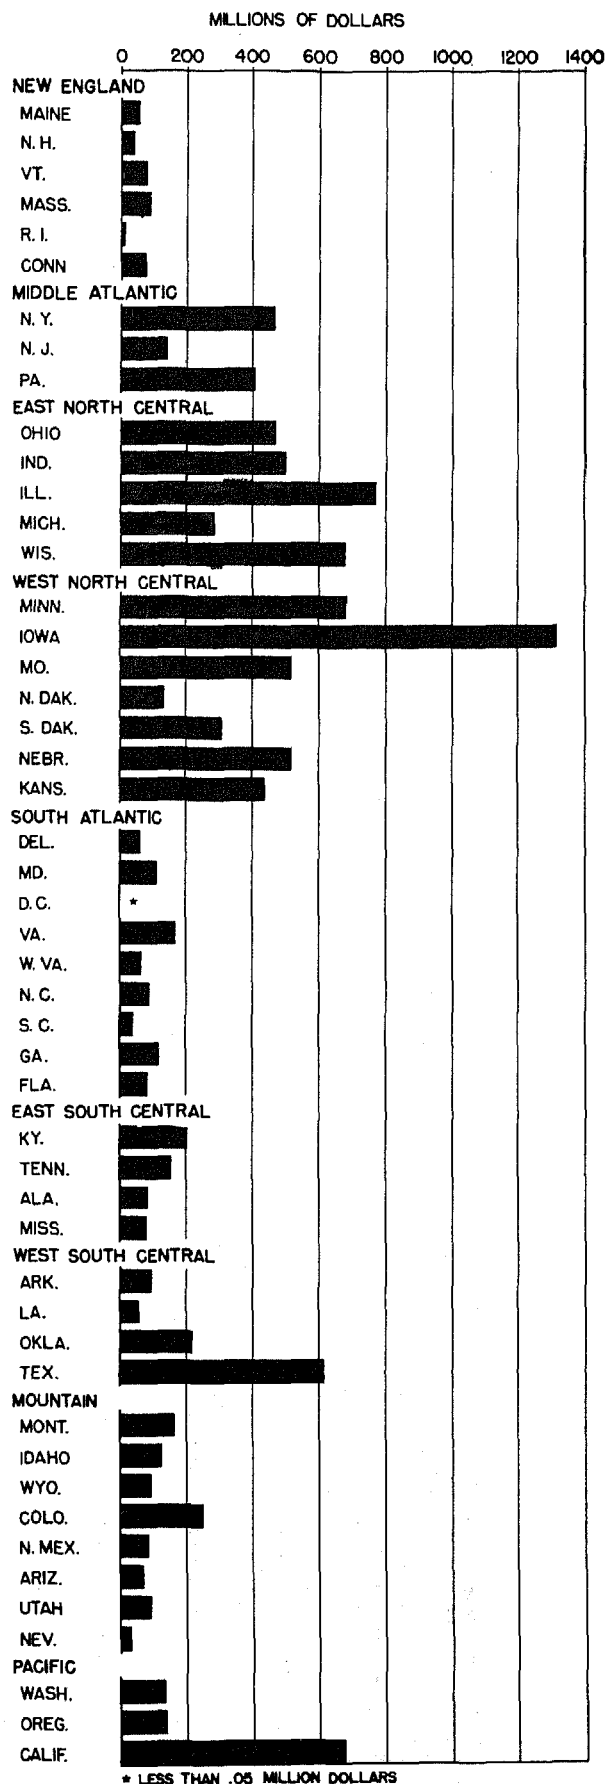

The other series of values relates to the value of livestock and livestock products sold. These values were obtained from the operator for each farm for which there were sales of livestock and livestock products.

Horses and mules.—Horses and mules were enumerated separately in the 1950 Census. Ponies were to be included with horses. Horses and mules on places not counted as farms are not included. Asses and burros were not enumerated in 1950.

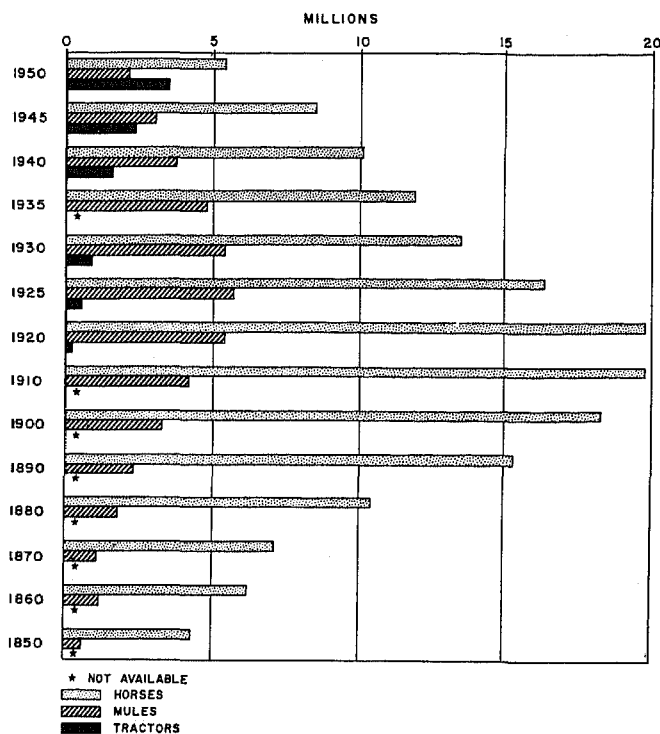

The numbers of horses and mules are rapidly decreasing. The decline in number of horses was first indicated in the 1920 Census and has continued since then. The greatest percentage decrease took place during the 5-year period, 1945-50. During this period, the numbers of horses and mules in the United States dropped from 8,499,204 in 1945 to 5,401,646 in 1950, a decrease of 36.4 percent.

The decline in horse numbers has not been general in all States. In parts of the South, horses are replacing mules, as indicated by data in tables 11 and 12. There were increases in the number of horses in 11 States in the South from 1935 to 1940. From 1940 to 1945, increases occurred in seven States, and during the last 5 years increases occurred in four States.

VALUE OF LIVESTOCK AND LIVESTOCK PRODUCTS SOLD, BY STATES: 1949

NUMBER OF HORSES, MULES, AND TRACTORS,
FOR THE UNITED STATES: 1850 TO 1950

Cattle.—The 1950 Census Questionnaire contained five inquiries regarding the number of cattle on hand on the census date. One of the inquiries asked for the total number of cattle and calves of all ages while the other four inquiries asked the number for four separate age and sex groups. Instructions on the questionnaire stated that the sum of the replies to the four inquiries must equal the reply to the inquiry regarding the total. Enumerators were required by instructions to make this comparison on each questionnaire.

The questionnaire contained two additional questions regarding milk cows. The first of these questions asked for the number of "Cows and heifers milked yesterday." This was followed by "How many milk cows were on this place yesterday? Include dry milk cows and milk heifers that have calved." The answers to the last question provided data on the number of milk cows. While the number of milk cows was obtained as of the day before each farm was enumerated rather than as of April 1, the figures have been considered comparable to data regarding the number of cattle on the farms as of April 1.

Dairy products sold.—The 1950 Census omitted an inquiry on amount of milk produced during the preceding year, an item included in each census from 1890 to 1945. Current milk production figures were obtained by means of four inquiries immediately following the cattle inventory questions. These inquiries obtained the number of cows milked, number of milk cows on the place, gallons of milk produced on the day preceding the date of filling the questionnaire, and pounds of butter churned during the preceding week.

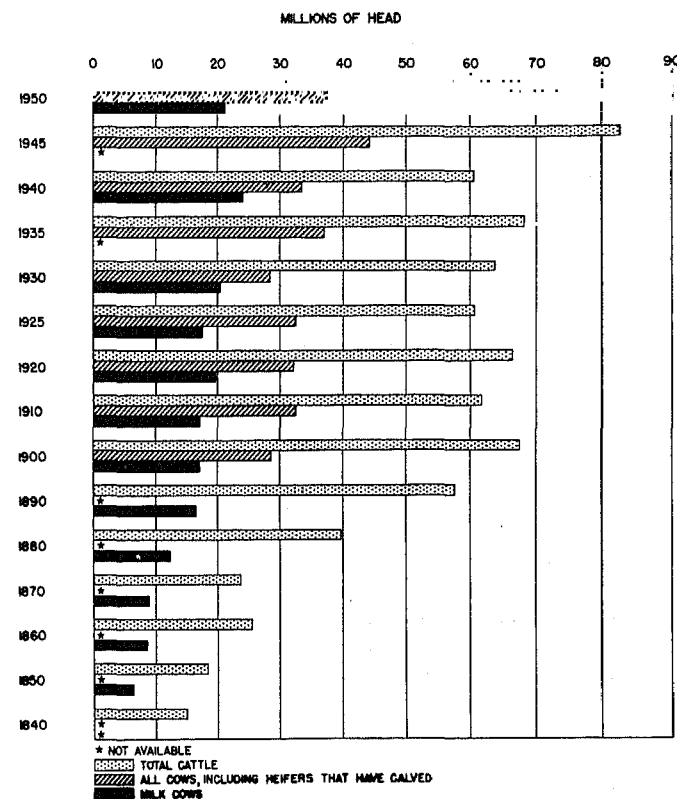

Three groups of inquiries on dairy products sold were included in the 1950 Census Questionnaire. These inquiries provided for reporting the amount and the value of whole milk sold; the pounds of butterfat in cream sold, and the value of cream and butterfat sold; and the value of butter, buttermilk, skim milk, and cheese sold.

In order to obtain as accurate statistics as possible on the amount of whole milk sold, provision was made on the 1950 Questionnaire

for the reporting of the amount sold in any of two or three different units of measure. As units of measure for reporting whole milk sold, pounds and gallons appeared on the questionnaires for all States, and pounds of butterfat appeared as an additional unit of measure on the questionnaire for some States.

The quantity of whole milk sold was tabulated for each county in the unit of measure in which it was reported on the individual questionnaire. Totals were thus obtained for two, or, for some States, three quantities of milk sold depending on the units of measure reported. The number of farms reporting milk sold was also obtained for each unit of measure. Totals of the farms reporting are given in table 23.

NUMBER OF CATTLE, OF COWS, INCLUDING HEIFERS THAT HAVE CALVED,
AND OF MILK COWS, FOR THE UNITED STATES: 1840 TO 1950

The amount of whole milk sold is shown in pounds in this chapter. Conversion of the reports in gallons to pounds was made by multiplying the total gallons by 8.6 pounds. Conversion of pounds of butterfat in whole milk sold to pounds of milk was made on the basis of the average butterfat test of milk. The average test was supplied to the Bureau of the Census by the Bureau of Agricultural Economics of the U. S. Department of Agriculture. In States in which the test varied little over the State, an average test was used for all the counties in the State. In other States, the average test used varied for the individual counties. The average butterfat test used for each State for converting pounds of butterfat in whole milk sold to pounds of whole milk sold is shown in table 23.

For 1944 and 1939, only the total value of all dairy products sold was obtained. Separate figures for the value of whole milk sold, cream sold, and other dairy products (butter, buttermilk, skim milk, cheese) sold were not obtained. The figures given in table 23 for 1944 and 1939, for the value of whole milk sold, cream sold, and other dairy products sold represent estimates. These estimates were prepared by multiplying the quantities of each of the three groups of dairy products sold for each State by the

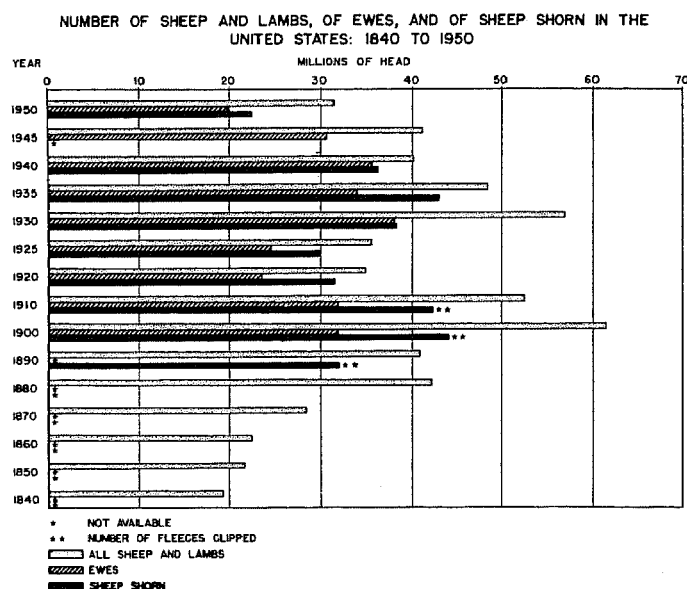

average estimated price per unit and by adjusting the totals of the three groups of dairy products sold to equal the enumerated value of all dairy products sold.

Hogs.—The 1950 Questionnaire contained three inquiries regarding the inventory number of hogs. One inquiry called for the total number of hogs and pigs of all ages, while the other two inquiries asked for the number less than 4 months old, and for the number 4 months old and over.

Data regarding the number of sows and gilts farrowing were obtained by means of two inquiries. The first of these inquiries asked for the number of sows and gilts that had farrowed any time between December 1, 1949, and the date of the enumeration. Sows farrowing during this period were to be reported regardless of whether or not they were on the farm at the time of the enumeration. The second inquiry called for the number of sows and gilts that were expected to farrow between the date of the enumeration and June 1, 1950.

Sheep and wool.—Inquiries on the 1950 Questionnaire relating to sheep numbers were the same, with one exception, in all States. In all States, the total of all ages was obtained, followed by the groups classified by age and sex. However, in the States comprising the Mountain and Pacific Divisions, and the States of Texas, North Dakota, and South Dakota, two additional inquiries were made regarding ewes 6 months old and over. One of these inquiries asked for the number of yearling ewes and the other, the number of older ewes.

The inquiries regarding sheep shorn and wool were separated from the inventory questions on the 1950 Census Questionnaire. This arrangement of questions was designed for the purpose of securing a more complete enumeration of sheep shorn and wool produced on farms on which sheep were shorn in 1949, but on which there were no sheep at the time of the census.

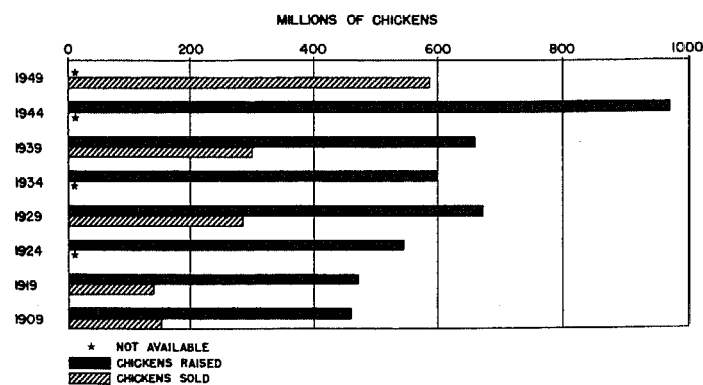

Goats, rabbits, and fur animals.—In 41 States and the District of Columbia, the inquiry on the 1950 Questionnaire regarding goats and kids was combined with those relating to rabbits and fur animals in captivity. The inquiries called for the reporting of any of the following three types of animals that were on the farm or were kept during the year preceding the census: goats, domestic rabbits, and fur animals in captivity. The other inquiry called for the value of mohair clipped and value of sales of goats and kids, goat milk, rabbits, and pelts. For these 41 States, the only data that relate solely to goats are the number of farms reporting goats either on hand or kept the previous year.

Inquiries asking for the number of goats and the production of mohair were carried on the 1950 Questionnaire in only seven States (Arizona, California, Missouri, New Mexico, Oregon, Texas, and Utah). In these States, data were obtained separately for Angora goats and for other goats. Statistics were also obtained for these States for the number of goats clipped, pounds of mohair clipped and a combined value of goats and kids sold, goat milk sold, and mohair clipped in 1949. In these seven States, data were also obtained for farms reporting domestic rabbits, for farms reporting fur animals in captivity, and for the value of rabbits, fur animals, and pelts sold in 1949.

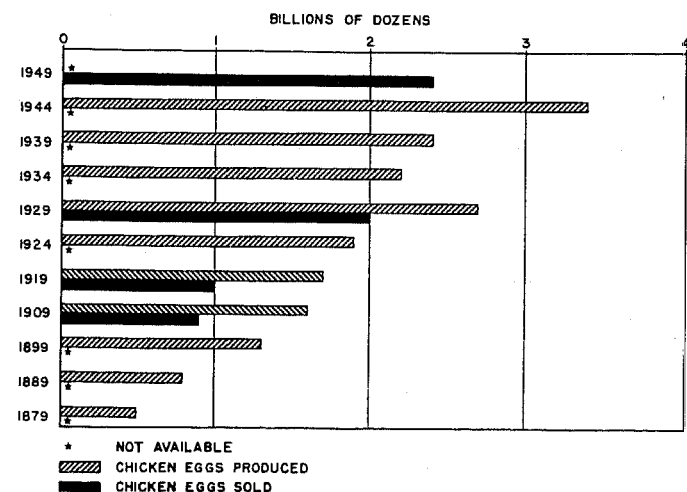

Poultry.—The 1950 inquiries on poultry were the same on the questionnaires for all States. The poultry questions called for the number of chickens and the number of turkeys 4 months old and over on the place; the number and value of chickens sold, and the dozens and value of chicken eggs sold; the number of turkeys raised, and the number of ducks, geese, and other poultry raised; and the combined value of turkeys and turkey eggs, and ducks and geese and their eggs sold in 1949.

The data for the number and value of chickens sold are not fully complete in areas producing a considerable number of broilers. The wide variety of "contract" arrangements for the production of broilers, the raising of broilers on places not considered by the enumerators as farms, and the going out of business by some operators raising broilers in 1949 before the census enumeration, contributed to the incomplete enumeration of chickens sold.

Animals sold alive.—The 1950 Census of Agriculture Questionnaire had separate inquiries for number sold and value of sales in 1949 of cattle excluding calves, calves, hogs and pigs, sheep and lambs, and horses and mules. These inquiries were the same for all States.

Enumerators were instructed that livestock sold by livestock dealers was not to be reported. No instructions or definitions were provided to the enumerator or to the farmer in regard to age, weight, etc., of cattle to be reported as calves.

The sales of horses and mules were reported together. Most horses and mules reported sold were draft animals but in some States the high average value reported per animal sold indicates that the horses sold included considerable numbers of race horses.

Farm butchering.—Reports for inquiries under this heading were to be limited to animals butchered in 1949 for use on the farm or for sale as farm-butchered meat. These animals need not have been butchered on the operator's farm. Separate inquiries appeared on the 1950 Questionnaires for all States for the numbers of cattle excluding calves, calves, and hogs and pigs butchered. In Texas, and the States of the Mountain and Pacific Divisions, the questionnaires included an additional inquiry on the number of sheep and lambs butchered. A combined value of sales in 1949 of meat, lard, hides, and other products from animals butchered was obtained for all States.

Bees and honey.—The four inquiries on the 1950 Questionnaire regarding bees and honey were the same for all States. The first inquiry asked the operator, "Were any bees owned by you last year?" The second inquiry called for the number of hives of bees owned in 1949. Enumerators were instructed to report the largest number owned at any time in 1949 wherever they may have been kept. Therefore, the number of hives of bees reported for 1950 does not represent the number of hives at the time the census was taken in April 1950.

The number of hives of bees reported for censuses prior to 1950, represents the number on hand at the date of the census. Prior to 1930, hives were enumerated on the place on which they were located. The plans for the 1930 Census recognized that bees owned by a farm operator may not be located on the farm he operated and the inquiry regarding the number of hives was "Hives of bees owned by you on this farm or elsewhere" (as of April 1, 1930). For the 1940 Census, the inquiry regarding the number of hives was changed to "Hives of bees, April 1, 1940: (a) owned by others, but kept on this farm; (b) owned by you, on this farm and on nonfarm land such as deserts, hills, swamps, etc." Because of the changes in the inquiries the data on the number of hives of bees for the 1950 Census may not be fully comparable with the data for prior censuses.

A considerable number of hives of bees are kept on places not included in the census as farms and also a considerable number of hives of bees are owned by persons who live on places that are not enumerated as farms. In planning for the 1950 Census, it was recognized that the census would not provide for the complete enumeration of the hives of bees and honey production. The purpose of including inquiries on bees in the 1950 Census was to obtain reliable data on the average production of honey per hive as a basis of the preparation of estimates by the U. S. Department of Agriculture for the number of hives and for the total production of honey.

The third inquiry in 1950 called for the amount of honey produced in 1949 by the bees owned. The fourth inquiry called for the value of the 1949 crop of honey and wax sold or to be sold and of bees sold in 1949. Enumerators were instructed to include with this value receipts from fruit growers, producers of seed crops, etc., for the use of bees for pollination purposes.

*** Not available; separate inquiry not on questionnaire for all States. See text. ¹ Butter only for 1944 and 1939. ² Reports in gallons and in pounds of butterfat were converted to pounds. Conversion of pounds of butterfat in milk sold to pounds of milk made on basis of estimated test of milk in each State. Conversion of gallons to pounds made at 8.6 pounds per gallon. ³ Estimates furnished by the Bureau of Agricultural Economics for use in converting reports of whole milk sold on a butterfat basis to pounds of whole milk sold. Where leaders appear factors were not necessary for conversion. See text. ⁴ Published values for these years were computed on the basis of average prices. For publication in the 1950 Census, these values have been adjusted to equal the enumerated value of all dairy products sold. See text. ⁵ 0.05 percent or less.

¹Includes any farms reporting sheep shorn with no sheep on hand. ²North Dakota and South Dakota were admitted as States in 1889. Figures for 1880 obtained by consolidating data for the counties which then occupied the areas now known as North Dakota and South Dakota, respectively. The 1870 and 1860 figures are for Dakota Territory. ³In 1860, 1850, and 1840, Virginia included the area now known as West Virginia. ⁴Figures for 1900 include Indian Territory; those for 1890 are for Oklahoma Territory alone; those for 1880 are for Indian Territory.

[Number of sheep shorn not enumerated in 1945 Census. Value of wool shorn as shown for 1940 was enumerated; for 1944 and 1939 value shown was computed using county unit prices.]
