CHAPTER XII.—ECONOMIC CLASS OF FARM

Introduction.—This chapter presents data showing characteristics of farms and farm operators by economic class of farm. The purposes of the classification of farms by economic class are to segregate groups of farms that are somewhat alike in their characteristics and problems, to show the relative scale of operations and relative significance of different producing groups, and to make more useful and meaningful the statistics regarding the characteristics and organization of agricultural production.

The data for farms grouped by economic class supplement those for other classifications which were made on the basis of size of farm (as measured by the total area in the farm), tenure of farm operator, and type of farm. To describe the organization of agriculture more fully, percentage distributions of the farms in each economic class, by size of farm and by tenure of operator, are given in this chapter. The types of farms for each economic class are given in chapter XIII of this volume.

Sources of data.—All data presented in this chapter are from the 1950 Census of Agriculture. There are no comparative figures by economic class of farm for earlier census years. A classification of this nature was made in 1945 but the criteria used in making the classification were not the same as in 1950.

All figures are estimates based upon reports for only a sample of farms. A description of the farms classified as large farms, and an explanation of the sampling plan, and of the method used in the expansion of the data to represent all farms, and data regarding the reliability of estimates based on reports for only a sample of farms, are given in the Introduction to this volume.

Presentation of statistics.—The statistics presented herein are for the United States, for three major regions, for nine geographic divisions, and for each of the States. An outline map showing these geographic areas appears in the Introduction to this volume.

Many of the totals by economic class are not given for States, geographic divisions, and regions in this chapter. Economic Area Tables 8 and 12 of Volume I of the 1950 Census of Agriculture reports contain nearly all the totals available, by economic class of farm, for the States and State economic areas. All State totals given in this chapter are in agreement with those shown in Economic Area Tables 8 and 12 of Volume I. However, table 1 of this chapter presents a summary for the United States of all available basic data relating to economic class of farm. That table also contains derived figures, such as averages and percentages, to indicate various relationships by economic class of farm.

County Table 7 of Volume I gives, for counties and for each State, the number of farms by economic class. These county totals were adjusted to equal the total number of farms, as enumerated. The State totals, shown in County Table 7 of Volume I will, therefore, vary from the State totals shown in Economic Area Tables 8 and 12 of Volume I and from those shown in this chapter. The data shown in County Table 6 of Volume I, for the characteristics for commercial farms and for other farms, are for all farms, as enumerated.

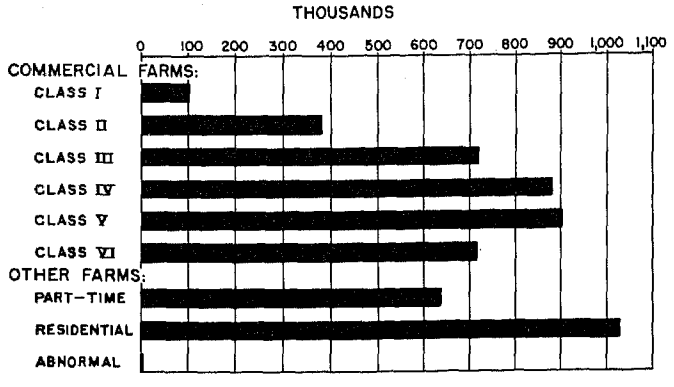
The number of farms of each type classified by economic class of farm are shown for States and geographic areas in Chapter XIII, "Type of Farm." Such data are not shown in this chapter except that United States totals appear in table 1. The counts of part-time farms, residential farms, and abnormal farms by tenure of operator, appear in tables 48 through 50 of this chapter, and of part-time farms by type of farm in table 51 of chapter XIII.

Averages and percentages rather than totals are shown in this chapter for the purpose of indicating the organization of farms or the economic status of farm operators. In most tables, totals are presented for all farms, commercial farms, and other farms. In only a few tables are totals presented for each of the economic classes of commercial farms and for each of the classes comprising other farms (part-time, residential, and abnormal).

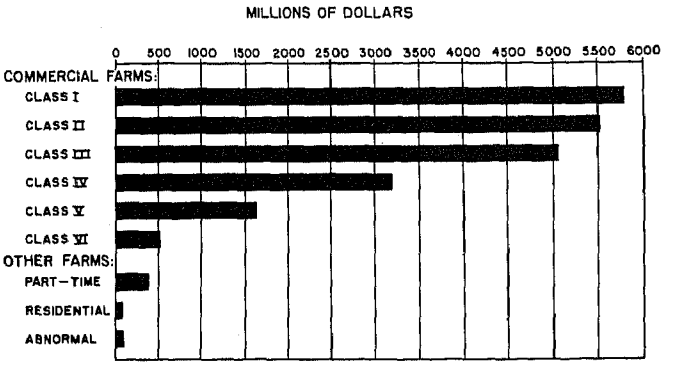
The maps accompanying this text show the geographic distribution of each class of farm and also of commercial farms and other farms, as groups. These maps serve the purpose of giving a quick visual picture of the distribution of the various classes of farms.

Basis of classification.—In making the classification of farms by economic class, all farms were classified into two economic groups, namely, "commercial farms," and "other farms." (The data for this grouping, based on all farms, appear in County Table 6 of Volume I.) A sample of approximately 20 percent of the farms was further classified. The "commercial farms" were classified

NUMBER OF FARMS BY ECONOMIC CLASS, FOR THE UNITED STATES: CENSUS OF 1950



VALUE OF SALES OF PRODUCTS BY ECONOMIC CLASS OF FARM, FOR THE UNITED STATES: CENSUS OF 1950



into six groups—Classes I through V, solely on the basis of the value of farm products sold, and Class VI, on the basis of the value of farm products sold, off-farm work by the operator, or the relationship of the income of the farm operator and members of his family from nonfarm sources to the value of farm products sold. "Other farms" were classified as part-time, residential, and abnormal farms.

The data for value of farm products sold from a farm, days of off-farm work by the farm operator, and other income of operator's family, upon which the classification by economic class of farm was made in 1950, relate to the year 1949. The total acreage in the farm and the person in charge of the farm operations at the time of the enumeration in 1950 determined the relationships of these criteria.

DEFINITIONS AND EXPLANATIONS

The following definitions and explanations outline the criteria used in making the classification by economic class of farm.

A farm.—For the 1950 Census of Agriculture, places of 3 or more acres were counted as farms if the value of agricultural products in 1949, exclusive of home gardens, amounted to $150 or more. The agricultural products could have been either for home use or for sale. Places of less than 3 acres were counted as farms only if the value of sales of agricultural products in 1949 amounted to $150 or more. Places operated in 1949 for which the value of agricultural products in 1949 was less than these minima because of crop failure or other unusual situation, and places operated in 1950 for the first time were counted as farms if normally they could be expected to produce these minimum quantities of farm products.

All the land under the control of one person or partnership was included as one farm. Control may have been through ownership, or through lease, rental, or cropping arrangement.

A farm operator is a person who operates a farm either performing the labor himself or directly supervising it. He may be an owner, a hired manager, or a tenant, renter, or share cropper. If he rents land to others or has land cropped for him by others, he is listed as the operator of only that land which he retains. In the case of a partnership, one member was included as the operator. The number of farm operators is considered the same as the number of farms.

Land in farms was determined by adding the number of acres owned, and the acres rented from or worked on shares for others, and subtracting the acres rented to or worked on shares by others

Commercial farms include all farms, except the abnormal farms, with a value of sales of farm products amounting to $1,200 or more. Commercial farms also include the farms with a value of farm products sold of $250 to $1,199 provided the operator worked off the farm less than 100 days and provided further that the income of the farm operator and members of his family received from nonfarm sources was less than the total value of all farm products sold. The criteria for the six economic classes which comprise commercial farms and their numbers for the United States, are given below.

[Commercial farms—3,706,412]

Class	Number of farms	Criteria		Farms excluded
		Value of farm products sold	Other	
I	103,231	$25,000 or more	None	Abnormal.
II	381,151	$10,000 to $24,999	None	Do.
III	721,211	$5,000 to $9,999	None	Do.
IV	882,302	$2,500 to $4,999	None	Do.
V	901,316	$1,200 to $2,499	None	Do.
VI	717,201	$250 to $1,199	Less than 100 days of off-farm work by operator and income of operator and members of his family from nonfarm sources less than value of all farm products sold.	Do.

Other farms include those not classified as commercial. The criteria for the three classes comprising the group of other farms and their numbers, for the United States, follow:

[Other farms—1,672,838]

Class	Number of farms	Criteria		Farms excluded
		Value of farm products sold	Other	
Part-time	639,230	$250 to $1,199.	100 days or more of off-farm work by operator or income of farm operator and members of his family from nonfarm sources greater than value of all farm products sold.	Abnormal.
Residential	1,029,392	Less than $250.	None	Do.
Abnormal	4,216	Not a criterion.	Institutional farms, experimental farms, grazing associations, community-project farms, etc.	

Abnormal farms comprise public and private institutional farms, experimental farms, grazing associations, cooperative farms, etc. These farms were identified on the basis of the name of the operator or owner of the farm.

The classification of farms by economic class was made upon the basis of data for only 1 year. Inasmuch as this grouping of farms is based primarily on the value of farm products sold and off-farm work by farm operator, changes in farm price levels and off-farm employment would affect the number of farms in each economic class. Also, the economic class of a particular farm, based upon the records for 1 year's operation, may be affected by crop failure and by the expansion or contraction of inventory of livestock or farm products at greater than the usual yearly rate. Also, the type of farm is an important factor in determining economic class as the value of farm products sold more nearly represents net income for some types than for other types of farms.

The completeness of the reporting of the value of farm products sold affects the accuracy of the classification of farms by economic class. The questionnaires for the 1950 Census of Agriculture contained from 31 to 39 inquiries, varying by States, regarding the value of a single or a group of farm products sold. The value of a farm product sold was, in most cases, to be reported in connection with the quantity of that product produced and the quantity sold or to be sold. In case the value of a farm product or a group of products sold or to be sold was not reported, the value of sales was estimated during the office processing, if it appeared that production was sufficient for sales to have occurred. In determining whether such sales should be estimated, and how much sales were to be estimated, liberal allowances were made for requirements for farm use for production purposes as well as for use by the household of the farm operator and other households on the farm. However, the values of farm products sold which were estimated during the office processing represented a very small percentage of the value of all farm products sold.
