## SECTION VII.

# FRUITS, NUTS, AND FOREST PRODUCTS.

### GENERAL INTRODUCTION.

#### VALUE OF FRUITS.

The Twelfth Census was the first that attempted to obtain definite reports of the value of fruits and nuts. In previous census years inquiries had been made concerning the amounts received from the sale of garden products, including small fruits, and the amounts received for other fruits. No inquiries were made, however, concerning the value of any particular class of fruits, nor of those consumed on farms. Many difficulties were encountered, and the experience gained has pointed out methods which, in succeeding years, will unquestionably give to this branch of census statistics a greater degree of accuracy, and permit of their presentation in a form that will make them of more value to the public. The chief difficulty was that pointed out in the introduction to Section III, relating to vegetables, concerning the value of that portion of the crop consumed on the farm. Unquestionably very imperfect reports were received of the quantities and values of such fruits.

Notwithstanding this defect, it is believed by those in charge of the work that but few branches of census statistics undertaken for the first time have secured more valuable results, or those which more nearly approximate a correct statement of the facts.

The reported values of fruits were as follows: Total

value of all fruits, \$131,423,517; orchard fruits, \$83,751,840; grapes, \$14,090,937; small fruits, \$25,030,877; and subtropical fruits, \$8,549,863. The value of nuts was \$1,950,161, and that of forest products, \$109,989,868.

Of the \$131,423,517 worth of fruit reported by the Twelfth Census, California contributed \$28,280,104, or 21.5 per cent; New York, \$15,844,346, or 12.1 per cent; Pennsylvania, \$9,884,809, or 7.5 per cent; Ohio, \$8,901,220, or 6.8 per cent; and Michigan, \$5,859,362, or 4.5 per cent. These 5 states reported fruits of an aggregate value of \$68,769,841, or 52.3 per cent of the total for the country. Missouri reported fruit with a farm value of \$4,309,813; Illinois, \$5,455,213; and Indiana, \$4,630,169. These 8 states, measured by the value of their fruit production, may be called the most important fruit-growing states of the Union. Other states have reported greater quantities of some particular kinds of fruit than were reported by some of the states mentioned, but if a state is so situated with reference to markets as to cause the total fruit product to have a small market value, it can not be said to have as much weight in controlling the fruit markets of the country as the states mentioned.

Table I gives the total value of fruits in 1899, by states and territories, arranged in descending order of the total reported value of the product.

TABLE I.—VALUE, AND PER CENT OF TOTAL VALUE, OF SPECIFIED KINDS OF FRUIT IN 1899, BY STATES AND TERRITORIES, ARRANGED IN DESCENDING ORDER OF VALUE.

STATES AND TERRITORIES.	Rank.	VALUE OF FRUIT, 1899.					Per cent.
		Total.	Orchard fruit.	Grapes.	Small fruit.	Subtropical fruit.

<sup>1</sup> Less than one-tenth of 1 per cent.

No report of fruit values having been made previously, it is impossible to make any comparison with values in earlier years.

Of counties with large reported values of fruit, mention may be made of Santa Clara county, Cal., with a reported value of \$3,401,341, of which the greater portion consisted of orchard fruits and grapes; Fresno county, in the same state, reported a total of \$3,258,815, nearly two-thirds of which was the value of grapes, and about one-third, that of orchard fruits; Chautauqua county, N. Y., reported fruit valued at \$1,620,923, of which the greater portion consisted of grapes; and Niagara county, N. Y., reported \$1,184,482, derived principally from orchard fruits. These values of fruits include the value of all such products as cider, dried fruits, wine, raisins, and kindred products made on farms from the fruits raised thereon.

Fruits in 1899, including these derivative products, had a farm value of about \$1.50 for each individual in the United States. The amount paid by consumers for that portion of the total crop marketed was un-

questionably much greater, as transportation charges, and the profits of commission merchants, wholesalers, and retailers, are several fold more than the sum realized by producers.

Table II presents a summary by geographic divisions of the total value of the various kinds of fruits reported in 1899, and table III gives the per cent of the total value contributed by each fruit, by geographic divisions.

TABLE II.—VALUE OF SPECIFIED KINDS OF FRUIT IN 1899, BY GEOGRAPHIC DIVISIONS.

GEOGRAPHIC DIVISIONS.	VALUE OF FRUIT.				
	Total.	Orchard fruit.	Grapes.	Small fruit.	Subtropical fruit.
The United States.....	\$131,423,517	\$33,751,840	\$14,090,937	\$25,030,877	\$8,549,868

<sup>1</sup> Less than one-tenth of 1 per cent.

Table IV presents an exhibit of the quantities of all fruits grown in 1889 and 1899.

TABLE IV.—POUNDS OF FRUIT PRODUCED IN 1889 AND 1899.

ITEMS.	1899	1889
Orchard fruit:		
(a) Pomaceous .....	9,167,406,320	7,339,146,950
(b) Drupaceous .....	1,440,186,646	1,851,266,503
Small fruit .....	474,061,993	.....
Grapes.....	1,301,013,407	1,145,315,160

For the purpose of this calculation all fruit has been reduced to the common unit of a pound and combined under a few leading heads. The figures for orchard fruit were obtained in 1900, as in 1890, by a house-to-house enumeration. Taken as a whole, they show an increase in total production from 9,190,413,453 pounds

to 10,607,592,966 pounds, a gain of 1,417,179,513 pounds, or 15.4 per cent. The statistics of 1890 for subtropical fruits were not secured by enumerators, but were obtained as the result of correspondence and were very largely estimates. These estimates were probably somewhat exaggerated, thus concealing a portion of the actual gain in the last decade, for which reason many fruits are omitted from the foregoing table.

An effort was made by the Twelfth Census to secure by enumeration a statement of the acreage devoted to fruits, and the schedules employed called for reports of the acreage of orchard fruits as well as of small fruits. The reports were fairly complete for small fruits, but not for orchard or subtropical fruits. A relatively large number of farmers growing all of these fruits have only a few of each, and they are not so arranged on the farm as to permit of any definite statement of acreage. Hence, the enumerators were forced to omit reports of the acreage of such fruits, and omitting one class they omitted all. Exceptions to this rule are found in the principal fruit-growing regions, where fair reports were secured of acreage, as well as of the number of trees. Such reports were considered sufficiently typical to warrant their use as a basis of estimating acreage for the country. The total acreage of subtropical fruit trees in the United States, June 1, 1900, as thus estimated, is given in table cxviii of Volume I, as 165,858, and that of all other orchard trees, as 6,064,887, making a total area in fruit trees of 6,230,745 acres.

ORCHARD FRUITS.

INTRODUCTION IN AMERICA.

Cultivation of fruits in America was begun, probably, prior to the historical era. The Indians of the North and of the central South were supplied by nature with an abundance of wild grapes, berries, and nuts, which they dried for use during the winter and did not need to cultivate. But in the arid regions of the Southwest, where the prickly pear is the sole indigenous fruit, the Zuni and other Pueblo tribes doubtless cultivated subtropical plants (certainly melons, as well as vegetables) in their small irrigated patches prior to the visit of the whites to Santa Fe in 1537.

The earliest planting of fruit by white men in North America is credited to the Spaniards under Menendez, who planted orange trees at St. Augustine, Fla., about 1562, and to the early Jesuit fathers, who planted pears in the region of the Great Lakes at about the same date. The first historically authenticated planting is of a vineyard of native grapes by Lord Delaware in Maryland, in 1610. Grapes also were mentioned as growing at Jamestown in 1619, but the first mention of fruit trees is in 1622, species unknown. The first authenticated pear planting was in New York city in 1630, but that apple trees had been planted elsewhere at an earlier date is indicated in a report of 500 barrels

of cider made by one man in 1639. In 1614 plantings were made of imported apple and pear trees, and one of the latter, planted at the corner of Third avenue and Thirteenth street, New York city, lived until 1866. In 1686 an orchard of 2,500 trees was reported, and in 1726 a village near Boston reported 10,000 barrels of cider. Until within the last half century apples were grown almost solely for cider making, as is the case to-day in France, with specific horticultural varieties, whence scions have been recently imported by the Department of Agriculture. Washington, Jefferson, and others, fostered horticultural interests according to the best information then available. Penn favored the use of indigenous fruits alone.

Table 1 gives the statistics of the number of orchard trees, June 1, 1900, and of the quantity of fruit grown in 1899, together with the value of the same. Table 2 presents the same information by counties, and Table 3 gives in parallel columns a report of the number of trees and of the bushels of orchard fruits produced in 1889, as well as in 1899.

In table v is presented a comparative summary derived from these tables of the number of trees and bushels of various kinds of orchard fruits grown in 1889 and 1899.

## STATISTICS OF AGRICULTURE.

TABLE V.—ORCHARD TREES AND FRUITS: 1890 AND 1900.

FRUITS.	TREES.				BUSHELS. <sup>1</sup>			
	1900	Per cent of total.	1890	Per cent of total.	1900	Per cent of total.	1890	Per cent of total.
All orchard fruits .....	367,164,694	100.0	193,452,688	100.0	211,736,325	100.0	187,570,404	100.0

Cherries .....	11,943,287	3.2	5,638,759	2.9	2,873,499	1.4	1,476,719	0.8
Apricots .....	5,010,139	1.4	1,682,191	0.8	2,642,128	1.3	1,001,482	0.5

<sup>1</sup> For years 1899 and 1889.

The apple has a decided primacy among American fruits. Of the orchard trees reported in 1900, 55.0 per cent were apple, and of the bushels of fruit reported, 82.8 per cent were of that variety. In ten years the number of apple trees increased more than 80,000,000, yet the number of other fruit trees increased so much faster, that apple trees, which constituted 62.1 per cent of all in 1890, were only 55.0 per cent in 1900. The greatest relative increases were made by the pear, plum, and cherry; the per cent the number of pear trees constituted of the total number of trees having increased from 2.6 to 4.8; plums, from 3.7 to 8.4; and cherries, from 2.9 to 3.2. The number of peach trees reported showed a large increase, but made a smaller per cent of gain than did their fruit, and hence the per cent of the total slightly decreased.

The figures for quantities of fruit produced vary considerably from those of the number of trees reported, owing to the fact that production varies greatly with the nature of the season.

The apple crop of 1899, taking the country as a whole, was more nearly a normal one than was that of any other orchard fruit. Further, the average production of apple trees being larger than that of other trees, affects the total in such a comparison as that of table v, more than does the number of trees. The apple increased its proportion of the total production of orchard fruits from 76.3 per cent in 1889 to 82.8 per cent in 1899; the pear, from 1.6 per cent to 3.1 per cent; the plum, from 1.4 per cent to 4.1 per cent; cherries, from 0.8 per cent to 1.4 per cent; and the apricot, from 0.5 per cent to 1.3 per cent. Peaches, owing to a complete failure in many sections, decreased from 19.4 per cent to 7.3 per cent.

The 10 states which took the lead in 1899 in the value of their orchard products, as measured by farm value, were as follows: California, \$14,526,786; New York, \$10,542,272; Pennsylvania, \$7,976,464; Ohio, \$6,141,118; Illinois, \$3,778,811; Michigan, \$3,675,845; Indiana, \$3,166,338; Missouri, \$2,944,175; Virginia, \$2,662,483; and New Jersey, \$2,594,981. These states reported an aggregate value of orchard fruits of \$58,009,273, or 69.3 per cent of the total value of all orchard fruits in the country.

The schedule of the Twelfth Census called for reports of "trees of bearing ages," while those of the Eleventh called for reports of "bearing trees." This difference doubtless accounts for a part of the increase in the number of orchard trees reported in 1900. Many enumerators in 1900 appear to have understood by "bearing trees" those which actually produced fruit in 1899 in considerable quantities. Where there was a partial fruit failure the reports of trees in orchards were the least perfect. In some sections an analysis of the data returned by the enumerators makes it plain that in 1900 they included young trees that had not yet begun to yield fruit. Not all the trees planted are, however, included in Tables 1 and 2, and hence the estimate given in table v must be considered as an incomplete statement so far as the number of trees is concerned.

## APPLES.

Table vi gives for 16 states the number of apple trees reported in 1890 and in 1900 and their increase. A portion of the increase reflects the changes in the methods of reporting nonbearing trees of mature years, to which attention has been called, and in part to the planting of young orchards. It is impossible to distribute the gain due to the two causes.

TABLE VI.—NUMBER OF APPLE TREES IN SPECIFIED STATES, WITH INCREASE: 1890 TO 1900.

	Number of trees, 1900.	Number of trees, 1890.	Increase.
The United States .....	201,794,764	120,152,795	81,641,969

The greatest gain reported was in Missouri, the figures of which, when considered in connection with those

for the production of fruit in other states, suggest the possibility of a larger number of young trees having been included in the reports.

Table VII gives for each of the 15 principal apple-producing states, the yield of that crop in 1889 and in 1899, with the increase in each for the decade.

TABLE VII.—BUSHELS OF APPLES PRODUCED IN SPECIFIED STATES, IN 1889 AND 1899, WITH INCREASE.

STATES.	Number of bushels, 1889.	Number of bushels, 1899.	Increase.

<sup>1</sup>Decrease.

Measured by the quantity of fruit reported, the most important apple-producing states in 1899 were New York, Pennsylvania, and Ohio, in the order named. They reported a total of 68,789,388 bushels, or 34.1 per cent of the total apple crop of the country.

Table VIII gives, by states and territories, the number of apple trees reported per farm in 1900, with the number of bushels of apples per farm in 1899.

The large number of trees per farm are, in nearly all cases, either in new sections or in localities in which the apple-growing industry is developing. The average number per farm suggests the possibility that the large number of trees reported in 1900 included many young nonbearing trees. New Jersey and Connecticut reported the largest average production of apples per farm, 194.9 and 188.7, respectively. The averages in New York and Pennsylvania, being for farms of larger areas, are more typical of the industry. These averages were 138.1 and 126.5 bushels, respectively, per farm. The close approximation of these figures indicates the general accuracy of the reports, and, that for these states, there are but very few young trees included in the tabulation.

Table IX gives for 36 selected counties, noted for their

apple production, the number of farms reporting, June 1, 1900, and the number of trees reported and bushels of fruit produced in 1890 and 1900.

TABLE IX.—NUMBER OF FARMS REPORTING IN 1900, AND NUMBER OF TREES AND BUSHELS OF APPLES REPORTED BY SPECIFIED SELECTED COUNTIES: 1890 AND 1900.

<sup>1</sup> For years 1899 and 1889.

#### PEACHES AND NECTARINES.

The statistics of these two closely related fruits were collected under one head and are reported in the tables as peaches.

In the value of production among orchard fruits, the peach ranks second. It has a wider range for possible growth than the apple, some varieties succeeding equally as well in the North as in the South. Delaware and New Jersey, once peach centers, show a marked decrease in the last decade, while large areas of recent plantings are reported for North Carolina, Georgia, Alabama, and eastern Texas.

The nectarine is so similar to the peach as to be botanically classed as a variety of that fruit. It is even more difficult to grow than the apricot, and is produced in such small quantities—principally in California—that in the enumeration it was classed with the peach.

Table x gives the number of peach trees in the 10 states reporting the highest number in 1890 and 1900, with the per cent of increase or decrease in the last decade.

<sup>1</sup> For years 1899 and 1889.

<sup>2</sup> Decrease.

In California the crop of 1899 was a phenomenally heavy one, with thousands of bushels wasted, while in nearly all other states it was very light, due in most cases to the very severe "root-killing" winter of 1898-1899, and the consequent destruction of many trees and fruit buds. Table x shows California to have been first in the production of peaches, 511.6 per cent in advance of Texas, the next largest, although Michigan and Georgia reported more trees than did California. Indiana, Maryland, Virginia, West Virginia, Kansas, and other states are planting, annually, increasing numbers, and the secretary of the Missouri Horticultural Society estimated that state's crop in 1897 at 3,500,000 bushels—more than twice the California crop in 1889.

Table xi gives the number of trees and bushels of fruit reported in 1890 and in 1900 in 24 selected counties having large numbers of trees.

The average number of trees per farm is the best index to the location of the leading peach-growing districts of the country. Small numbers show where peach growing is only an incident to other branches of farming. The greatest average numbers are found in California, Colorado, New Jersey, Florida, and Michigan.

PLUMS AND PRUNES.

The plum ranks third in value of product among orchard fruits and second among drupaceous fruits. The common plum succeeds only in comparatively restricted districts, except on the Pacific coast, where the production of two varieties known as Prune d'Agen and Fellenberg has assumed great importance. The growth of the plum and prune industry in the United States is illustrated in table XIII.

<sup>1</sup> For years 1899 and 1889.

In Washington, Oregon, Idaho, and California prunes are produced in commercial quantities. The very great increase in all states was unexpected, but the fact that there have been such gains is evidenced in the decided decrease in imports and a corresponding increase in exports since 1895.

In table XIV is presented an exhibit of the production of prunes in certain counties in California in 1899, and a statement by percentages of the relative importance of the counties in such industry.

TABLE XIV.—PRODUCTION OF PRUNES IN THE UNITED STATES AND IN SPECIFIED COUNTIES IN CALIFORNIA.

COUNTIES.	Pounds produced in 1899.	Per cent of total.	Value. <sup>1</sup>
The United States .....	510,507,960	100.0	\$7,935,742

Other states .....	172,675,800	33.8	3,780,313

<sup>1</sup> Estimated.

The first grafting of the prune was in 1856 at San Jose, Cal., where, in 1870, the first large orchard was

planted. In the East the prune can not be dried successfully, but in western New York the fruit is marketed in large quantities in the fresh state. In the Mississippi Valley, Chickasaw and allied varieties of wild plums are cultivated, while farther east and in the South the Japanese plums and hybrids thereof are successfully grown.

While damson preserves were reported as abundant in Massachusetts in 1663, the curculio had practically destroyed commercial plum growing in the East until the advent of modern methods, i. e., jarring and spraying. In the Southern states the "sloes" and wild goose plums are grown in considerable quantities for northern markets, and the Marianna is used as a stock for better varieties.

Table xv gives by states and territories the average number of trees and average number of bushels of plums and prunes per farm reporting.

CHERRIES.

The cherry ranks third in importance among drupaceous fruits. Cultivated cherries are of two classes: Morellos (the semihardy fruit grown throughout the temperate zone and botanically known as *Cerasus vulgaris*) and Bigarreaus, or Hearts—the sweet cherries (*C. avium*), successful in restricted localities only.

Table xvi shows the number of trees and bushels of cherries reported for the 10 states in which that fruit was grown in greatest abundance in 1900 and 1890.

TABLE XVI.—NUMBER OF CHERRY TREES AND BUSHELS OF FRUIT PRODUCED, 1890 AND 1900, IN 10 SPECIFIED STATES, WITH PER CENT OF INCREASE.

<sup>1</sup> For years 1899 and 1889.

<sup>2</sup> Per cent of decrease.

All but 13 states show a gain in production, the 10 showing largest gains all lying north of the thirty-seventh parallel.

The earliest plantings of cherries were in the region from Delaware to Tennessee, but probably the most extensive plantings at the present time are in a region of which St. Louis is the geographic center, and within a radius of about 400 miles. A decided increase is shown in the number of trees reported throughout the United States.

Table xvii gives the average number of cherry trees and of bushels of fruit per farm reporting. The District of Columbia, Colorado, and California each reported a very large number of trees per farm. Colorado and California are the only states that are extensively engaged in growing cherries in commercial quantities.

TABLE XVII.—AVERAGE NUMBER OF CHERRY TREES PER FARM REPORTING, JUNE 1, 1900, AND BUSHELS OF FRUIT PRODUCED IN 1899, BY STATES AND TERRITORIES.

<sup>1</sup> Less than 1 bushel.

PEARS.

The pear, of which the earliest recorded planting in the United States was a tree near Governor Endicott's house in Boston, in 1630, is now grown throughout the United States, but, as a rule, in small areas, save in New York and Michigan.

Table xviii gives data concerning the pear industry in 1890 and 1900 for the leading pear-growing states.

TABLE XVIII.—NUMBER OF TREES, AND BUSHELS OF PEARS PRODUCED, 1890 AND 1900, FOR SPECIFIED LEADING PEAR-PRODUCING STATES, AND PER CENT OF INCREASE.

<sup>1</sup>For years 1890 and 1899.

<sup>2</sup>Decrease.

For canning, the Bartlett has long been considered the pear par excellence, but in Eastern orchards it is being displaced by the nearly blight-proof Keiffer. Closely planted orchards of 100 acres and more, of these pears are reported, and to their introduction may be attributed perhaps 90 per cent of the increase of the trees in the United States in the past decade. The Bartletts probably constitute nine-tenths of the pears grown on the Pacific coast, but efforts are being made to secure longer-season fruits of equal quality.

In table xix is given the average number of trees per farm and bushels per farm in 1899, by states and territories. As shown by this table, the greatest pear-growing states are New Jersey, Delaware, Colorado, and California. In Delaware the pear is taking the place of the peach, owing to the destruction of the peach orchards by disease in the last few years.

TABLE XIX.—AVERAGE NUMBER OF PEAR TREES PER FARM REPORTING, JUNE 1, 1900, AND BUSHELS OF FRUIT PRODUCED IN 1899, BY STATES AND TERRITORIES.

## QUINCES.

This fruit is grown in such small quantities that no attempt was made to secure separate reports. The production is supposed to be heaviest in New York state.

## APRICOTS.

This fruit is grown in relatively small quantities, and of the 1,001,482 bushels produced in 1889, California grew 97.0 per cent. This state reported in 1899 an

increase of 162.3 per cent in the yield, and of 194.2 per cent in the number of trees. Plantings elsewhere since 1890 are known to have been heaviest in the Western division, which reported, in 1899, 98.8 per cent of the crop and 87.9 per cent of the trees of the entire country. The apricot is a somewhat acid, drupaceous fruit peculiarly subject to attacks of curculio, disease, and late frosts. Table 3 shows reports of apricots as made to the Census Office in 1900 and 1890.

## SMALL FRUITS.

## GENERAL STATISTICS.

Table 5 gives the acreage, products, and value of small fruits, by states and territories, in 1899, and Table 6 presents the same class of statistics by counties. The value of small fruits was reported separately for the first time, the only statistics of small fruits collected in previous census reports being those of the receipts from the sale of small fruits combined with the sales of garden produce.

The total acreage was 304,029 and the total value \$25,030,877, or an average of \$82.33 per acre.

The ten states having the largest reported value of small fruits in the order of such value were as follows: New York, \$2,538,363; Ohio, \$1,767,357; Michigan, \$1,680,249; Massachusetts, \$1,493,714; New Jersey, \$1,406,049; Illinois, \$1,293,233; Pennsylvania, \$1,268,827; Indiana, \$1,113,527, and Missouri, \$1,050,811.

The total value of small fruits in 1899 was 10.3 per cent of the value of all vegetables grown in the same year. The schedules and correspondence relating to small fruits sought, so far as possible, to secure separate statistics of such fruits under the following six heads: (1) Blackberries, including dewberries; (2) cranberries; (3) currants; (4) gooseberries; (5) raspberries, including Logan berries, and (6) strawberries. All other small fruits were to be included in a seventh class, shown in this table as unclassified small fruits. This latter class unquestionably includes some fruits of the classes mentioned above, since some farmers merely reported small fruits grown, with their acreage and value, making no statement as to the character of such fruit.

## STRAWBERRIES.

Of the small fruits, strawberries led in both acreage and production. There were 151,373 acres reported, which produced 257,437,523 quarts, or an average of 1,701 quarts per acre. This production was fairly well distributed among the various geographic divisions, but the largest production, relative to the number of farms and the size of the population, was in the Western division.

Table xx gives the number of farms and quarts of strawberries reported in 1899 for 13 states, arranged in the order of production.

TABLE XX.—PRODUCTION, IN 1899, OF STRAWBERRIES IN 13 SPECIFIED STATES, WITH THE PER CENT OF THE TOTAL CROPS.

<sup>1</sup> Less than one-tenth of 1 per cent.

As has been pointed out in the discussion of vegetables, all garden products, whether vegetables or small fruits, grown in large quantities, are grown for canning, for a local city market, or for the trucking trade. The cultivation of strawberries, as of every other small fruit, involves more or less concentration of the industry in small areas which are specially suited thereto.

Table xxii gives the quantity of strawberries grown in the 14 counties which reported over 1,000,000 quarts each.

TABLE XXII.—NUMBER OF FARMS REPORTING STRAWBERRIES IN 1899 IN 14 SPECIFIED COUNTIES, PER CENT OF FARMS REPORTING, ACREAGE AND PRODUCTION, AND PER CENT OF THE TOTAL PRODUCT OF EACH STATE.

Sussex county, Delaware, and Anne Arundel county, Maryland, reported the greatest production of strawberries, the former 7,166,330 quarts, or 68.3 per cent of the strawberry crop of Delaware, and the latter, reporting 7,031,380 quarts, or 29.3 per cent of the total crop for Maryland. In Sussex county, Delaware, 40.4 per cent of the farms reported strawberries, and in Somerset county, Maryland, 71.7; while Tangipahoa parish, Louisiana, reported 90.3 per cent of all the strawberries grown in that state. The three Maryland counties grew 64.2 per cent of the crop of that state, and these 14 counties in 11 states reported, in the aggregate, 59,224,120 quarts of berries, or 23.0 per cent of the total crop of the country.

#### RASPBERRIES.

This berry ranks second among the small fruits, 76,628,107 quarts having been reported in 1899. The 15 states that grew over 1,000,000 quarts are New York, with 17,575,530; Michigan, with 12,119,400; Ohio, with 8,745,950; Pennsylvania, with 5,360,530; and Indiana, Illinois, Iowa, New Jersey, Wisconsin, Mis-

souri, Massachusetts, California, Maine, Delaware, and Washington.

In Wayne and adjacent counties in New York, large quantities of evaporated raspberries are prepared and sold chiefly in the prairie states of the Central valley and the lumber camps of the North and West.

The raspberry (*Rubus*), in both black and red "cap" varieties, succeeds only in the temperate zones; culture of the red varieties can not be said to be increasing, as owing to its frailty it is not well adapted to distant marketing. The black caps, cultivated only in North America, compete in market with the blackberry.

#### BLACKBERRIES.

This berry, which is of the same genus as the raspberry, is grown under practically the same conditions. Its reported acreage in 1899 was greater than that of raspberries, but its production was smaller, being heaviest in the North Central and North Atlantic states, which together produce 69.1 per cent of the total crop. A portion of this quantity unquestionably should be credited to wild fruit.

There were 9 states that reported over 2,000,000 quarts of blackberries. They were, Illinois, 7,294,990; Michigan, 5,324,110; Indiana, 5,255,840; Missouri, 5,121,860; Ohio, 4,905,430; California, 4,159,131; New Jersey, 3,918,320; New York, 3,167,090; and Texas, 2,701,750. A large part of the crop of the South Atlantic states is used in the distillation of brandy.

#### CURRENTS.

The currant is grown in this country almost solely for the production of jellies. Only 8 states reported over 1,000,000 quarts. They were, New York, 4,584,080; Michigan, 2,721,070; Iowa, 1,226,560; Ohio, 1,153,920; Wisconsin, 1,153,190; Indiana, 1,044,025; Pennsylvania, 1,031,870; and California, 1,031,100.

#### GOOSEBERRIES.

Indiana is the only state reporting over 1,000,000 quarts of gooseberries, its report giving an aggregate of 1,077,840 quarts. Aside from Indiana, there were 6 states reporting over 500,000 quarts. They were, Iowa, 975,890; Missouri, 865,870; Illinois, 779,730; Ohio, 767,760; and Michigan, 673,360.

#### CRANBERRIES.

The total yield of cranberries in the United States was 987,516 bushels, with an estimated value of \$1,215,059. Of this yield 598,906 bushels, or 60.6 per cent, were grown in Massachusetts; 240,221 bushels, or 24.3 per cent, in New Jersey; and 111,098 bushels, or 11.2 per cent, in Wisconsin; these three states, which constitute the principal cranberry-growing areas of the country, produced 96.1 per cent of the entire crop. The total area devoted to this crop was 20,434 acres.

In Massachusetts there were 5,128 acres of cranberry bog, and the average yield per acre was 117 bushels; while New Jersey had 8,356 acres of bog, with an average yield per acre of 29 bushels. The area given for Wisconsin was 5,821 acres, and the average yield per acre was 19 bushels, this low average being partly due to the inclusion in the total acreage of a number of new bogs which were not yet bearing, and the fact that a crop less than normal was gathered from other bogs owing to injury by blight, frosts, insects, and other causes. The average yield per acre was still further reduced by the scant crop on some of the natural bogs, owing to a lack of care and cultivation. The low average yield in New Jersey was largely due to a partial failure of the crop, only 61.5 per cent being gathered.

Nearly the entire crop in Massachusetts was grown in Barnstable and Plymouth counties, or what is known as the "Cape Cod district." In New Jersey two of the coast counties, Burlington and Ocean, produced over half the crop of the state. Jackson, Waushara, and Wood counties produced the bulk of the crop in Wisconsin. The largest cranberry bog in the country was located in New Jersey, where, from 492 acres of planted vines, 20,450 bushels of berries were harvested, and in addition 3,000 bushels were injured by blight, frost, and other causes.

The acreage and production of cranberries is shown by counties in Part B of Table 6. The number of farms reporting cranberries were as follows, by states: Massachusetts, 1,857; New Jersey, 435; Indiana, 167; Wisconsin, 101; Rhode Island, 98; Connecticut, 77; Illinois, 21; Iowa, 6; Kansas, 8; Maine, 36; Michigan, 29; Minnesota, 7; Nebraska, 4; New Hampshire, 35; New York, 15; North Dakota, 1; Oregon, 1; South Dakota, 3, and Washington 6.

Special reports from the growers show that of the total cranberry crop in Massachusetts, 83.2 per cent was gathered, 3.1 per cent was injured by blight, 4.2 per cent by frost, and 9.5 per cent by other causes.

In Wisconsin a larger per cent of the crop was lost, the amount gathered being 70.5 per cent of the total yield. The loss by blight was 9.7 per cent; by frost, 5.3 per cent, and by other causes, 14.5 per cent.

The greatest loss was in New Jersey, where only 61.5 per cent of the yield was marketed. The loss in that state by blight was 17.3 per cent; by frost, 8.7 per cent, and 12.5 per cent by other causes.

Cranberry culture began about one hundred years ago, but not until forty or fifty years later did the crop acquire commercial value. The American cranberry was first grown at Cape Cod, Mass., and it is still one

of the principal localities where the fruit is grown in large quantities.

Cape Cod growers have estimated the cost of preparing and planting a bog to be \$300 to \$350 per acre, and a good yield after the bog is in full bearing is from 50 to 200 barrels, or 150 to 600 bushels, per acre. In 1899 the average value on the farm was \$1.23 per bushel. A full crop is obtained from a new bog in three to four years. Cranberries can be grown upon high land in some sections, but the most satisfactory results are obtained from low boggy lands with well-drained peat or muck soil, convenient to a liberal water supply for flooding the vines at certain periods of the year. The land should be covered with a layer of sand to keep the underlying soil damp and cool and to check the growth of other vegetation.

The vines in the Eastern bogs are usually planted, while those in the West are to a large extent indigenous. Until recently little has been done in the West to improve the natural bogs other than clearing the ground to allow the vines to spread, but now extensive areas are planted and the yields increased by improvements to the bogs.

It requires considerable labor and money to prepare a bog for cultivation, and suitable land can be secured in only a few sections of the country, while skill and experience are necessary in protecting the crop from insects and regulating the water supply. These features have served to retard the growth of the industry, but of late years men with capital and experience have planted extensive bogs, especially in Wisconsin.

Two methods of gathering the berries are employed, one by hand and the other by the use of a rake scoop. Nearly all the bogs in the East are hand picked, and the Western growers are rapidly coming to adopt this system because it does not injure the vines. When the berries are gathered, they are cleaned and assorted into grades and carefully packed in barrels or crates preparatory to marketing. According to the laws of New Jersey, Massachusetts, and Wisconsin, the standard barrels must contain three bushels.

The principal distributing points are New York, Philadelphia, Boston, and Baltimore in the East, and Chicago in the West. The export trade is small, though the American-grown product has a better color and richer flavor than any in the European market.

An experiment station has been established in Wisconsin for the purpose of providing growers with superior varieties of cranberry vines, which are propagated and tested before distribution. This station has materially assisted in the improvement of the vine and the quality of the fruit.

GRAPES.

The grape was cultivated at a very early date in Europe and Asia along the shores of the Mediterranean, and upon the discovery of America the Indians were found to be making use of grapes that grew wild. The colonists introduced European varieties and also cultivated some of the native varieties. The Buller, or scuppernong grape, cultivated throughout the Southern states, has been derived from the original wild grape of the South, and is modified only to a slight extent by culture. Much experience and many failures have been necessary to ascertain what variety was best suited for cultivation in each section of the country. The grapes grown in the United States may be divided into three classes, according to their uses: Table grapes, wine grapes, and raisin grapes. The only grapes used for the manufacture of raisins, or dried grapes, are raised in California. Wine and table grapes are grown in nearly all sections of the country.

There are 12 states that report over 2,000,000 vines. These states are shown in table XXIII, arranged in the order of their production in pounds.

TABLE XXIII.—NUMBER OF GRAPEVINES, PRODUCTION, AND VALUE OF GRAPES GROWN IN 1899, IN 12 SPECIFIED STATES.

STATES.	Number of vines.	Pounds of grapes grown.	Value of product.
California.....	90,686,468	721,433,400	\$5,622,825

Oklahoma.....	3,542,034	6,111,000	128,500

TABLE GRAPES.

In Europe the grape has always been used for the table, but its use in making wine is more extensive, even though its use in "grape cures" and the use of Zante "currants" (which are but a small vinifera grape akin to Muscatel and Thompson's Seedling) are included in the former.

Table xxiv presents the statistics of the number of grapevines in 1900, and the pounds of grapes produced in 1899 in the most important grape-growing counties in the United States.

TABLE XXIV.—NUMBER OF GRAPEVINES, JUNE 1, 1900, AND POUNDS OF GRAPES PRODUCED IN 1899 IN SPECIFIED COUNTIES IN NEW YORK, OHIO, AND CALIFORNIA.

COUNTIES.	Number of vines.	Pounds of grapes.
New York.....	29,636,216	247,698,056
Chautauque.....	11,914,706	127,841,900
Yates.....	4,802,617	32,512,815

Erie.....	1,366,043	4,932,600
Lorain.....	921,914	7,001,400
Ashtabula.....	608,826	1,547,100
Other counties.....	2,782,968	19,749,291
California.....	90,686,468	721,433,400
Fresno.....	24,904,559	274,233,500
Sonoma.....	15,004,458	94,476,900
Santa Clara.....	7,103,402	36,311,800
Napa.....	4,859,490	19,844,200
King.....	4,218,824	58,572,800
Sacramento.....	3,639,513	29,073,600
Other counties.....	30,956,212	208,920,600

The greater portion of the grapes grown in these counties is converted into wine.

WINE.

The Eleventh Census made a general investigation of the subjects of grape growing and wine making, combining the work that in the Twelfth Census has been performed by two divisions. In the Twelfth Census the division of agriculture has merely collected statistics of the growing of grapes and wine made on farms, which is only a small portion of that made in the country, amounting to 8,246,344 gallons, of which California produced 5,492,216 gallons. The statistics of wine made on farms are given in Tables 1 and 2; that produced in wineries is found in the report of the division of manufactures.

## SUBTROPICAL FRUITS.

## INTRODUCTION.

The Eleventh Census secured by special correspondence, apart from the work of the enumerators, certain data relating to the number of subtropical fruit trees in the United States and the product derived therefrom. Upon the data thus secured were based certain estimates of the number of the various kinds of trees of this class and the fruit grown in 1889. The Twelfth Census sought to secure reports relating to this branch of the work through the enumerators. It is believed that the method adopted has resulted in accurate and trustworthy results, presented in Table 4 of this section. The value of the subtropical fruits is given by states and territories in table xxv.

TABLE XXV.—VALUE OF SUBTROPICAL FRUITS GROWN IN 1899, BY STATES AND TERRITORIES.

STATES AND TERRITORIES.	Total value.
The United States .....	\$8,549,868
California.....	7,219,082
Florida.....	945,607
Hawaii.....	322,025

TABLE XXVI.—NUMBER OF FARMS REPORTING SUBTROPICAL FRUITS, THE NUMBER OF TREES, JUNE 1, 1900, AND PRODUCTION IN 1899.

ITEMS	Farms reporting.	Number of trees.	Unit of measure.	Product.
Bananas.....	351	156,012	Bunches.....	141,658
Citrons.....	5	4,780	Boxes.....	90
Figs.....	528,598	377,346	Pounds.....	13,016,274
Guavas.....	423	113,081	Pounds.....	1,677,165
Kaki, or Japanese persimmons.....	202	6,890	Pounds.....	199,030
Lemons.....	5,053	1,518,677	Boxes.....	876,978
Limes.....	278	44,436	Boxes.....	24,375
Olives.....	3,225	1,540,155	Pounds.....	5,053,637
Oranges.....	15,054	8,397,710	Boxes.....	6,171,259
Pineapples.....	636	14,699,931	100 pounds.....	29,802
Pomelos.....	1,615	202,724	Boxes.....	30,530
Unclassified subtropical fruits.....	1,759	3,314,131	Pounds.....	2,969,239

The total value of all subtropical fruit reported in 1899 was \$8,549,863. Of that sum the largest amount, \$7,219,082, or 85.6 per cent, was contributed by California. Florida contributed \$945,607, or 11.1 per cent, and Hawaii, \$322,025, or 3.8 per cent of the total value. The most important of the subtropical fruit trees grown in the United States are those classed as citrus, which constituted at least 90 per cent of all such fruit trees in the country. The development of the citrus fruit industry in the United States has largely taken place in the last twenty years.

Table xxvii shows the number of the trees belonging to this class reported in the various states and territories in 1900, and the extent of the development noted above.

TABLE XXVII.—NUMBER OF SPECIFIED SUBTROPICAL FRUIT TREES, JUNE 1, 1900, BY STATES AND TERRITORIES.

## ORANGES.

The orange is the most important of the citrus fruits. It was brought from southern Asia to Portugal about 1500 A. D., from which country its cultivation spread throughout the Mediterranean region. Taken to Brazil by early explorers, it ran wild in the tropical forests of the Amazon and Paraguay, as did the sour orange when brought to Florida by the Spaniards under Menendez in 1560. Here, until about 1880, large wild groves were to be found, usually upon shell mounds, marking early abodes of the aborigines. The stock of this class of oranges has in more recent years been utilized to graft the scions of the sweet orange and tangerine, which have been introduced and extensively cultivated. The orange industry had reached considerable proportions prior to 1890, but since that year it has suffered as the result of severe frosts, which destroyed the greater portion of the orchards. As a result, the product in 1899 was less than one-half as large as in 1889. In California the number of orange trees has greatly increased, as it has, also, in Arizona. The orange is grown extensively in Los Angeles, Riverside, San Bernardino, Orange, and Butte counties, Cal.; in De Soto, Manatee, and Orange counties, Fla.; in Maricopa county, Ariz.; and in Plaquemines parish, La. For the statistics of orange growing in these counties see Table 4.

The following table gives the statistics, by states and territories, of the number of orange trees and the boxes of oranges grown in 1899:

TABLE XXVIII.—NUMBER OF ORANGE TREES, JUNE 1, 1900, AND QUANTITY OF FRUIT PRODUCED IN 1899, BY STATES AND TERRITORIES.

STATES AND TERRITORIES.	Trees.	Boxes.
The United States.....	8,397,710	6,171,259

Mississippi.....	3,696	.....
Oregon.....	1	.....
Texas.....	855	.....
Washington.....	2	.....

LEMONS.

Prior to 1894 large groves of lemon trees were cultivated in Florida, but since their destruction by frost in that year they have been grown for commercial purposes in California only.

Table XXIX gives, by states and territories, the number of trees and the product of 1899 as reported by the Twelfth Census.

TABLE XXIX.—NUMBER OF LEMON TREES, JUNE 1, 1900, AND QUANTITY OF FRUIT PRODUCED IN 1899, BY STATES AND TERRITORIES.

STATES AND TERRITORIES.	Trees.	Boxes.
The United States.....	1,518,677	876,078
Alabama.....	206	.....
Arizona.....	1,853	203

Oregon.....	2	.....
Texas.....	20	.....
Washington.....	2	.....

LIMES.

The number of lime trees and the quantity of fruit reported in 1899 are shown, by states and territories, in table XXX.

TABLE XXX.—NUMBER OF LIME TREES, JUNE 1, 1900, AND QUANTITY OF FRUIT PRODUCED IN 1899, BY STATES AND TERRITORIES.

STATES AND TERRITORIES.	Trees.	Boxes.
The United States.....	44,486	24,375
California.....	311	125
Florida.....	41,741	22,714
Hawaii.....	2,384	1,530

Limes are especially noted for their medicinal juice, and large quantities of them are imported from the West Indies annually. The use of the fruit itself is increasing greatly. The lime is a hardier tree than the orange or lemon, and can be grown under conditions which are highly unfavorable to the others.

POMELOES.

The area within which the pomelo, or grape fruit, can be successfully grown is very limited.

The statistics of this fruit, by states and territories, are given in table XXXI.

TABLE XXXI.—NUMBER OF POMELO TREES, JUNE 1, 1900, AND QUANTITY OF FRUIT PRODUCED IN 1899, BY STATES AND TERRITORIES.

STATES AND TERRITORIES.	Trees.	Boxes.
The United States.....	202,724	30,701
Alabama.....	282	.....

California.....	80,918	17,851
Florida.....	117,335	12,306
Hawaii.....	1	1
Louisiana.....	1,279	.....
Texas.....	109	.....

The introduction of the pomelo is of even more recent date than that of the lemon. Plantings of both pomelo and lemon are reported from Arizona for the first time in 1899. The Florida product is especially fine flavored, but California far exceeds the peninsula state in the quantity produced.

CITRONS.

Citrons were reported from California alone. The cultivation of 4,780 vines was reported, with a product of 90 boxes of fruit.

GUAVA.

The guava is grown only in California and Florida. In the former state 7,053 trees and 31,370 pounds of fruit were reported, and in Florida 106,025 trees and 1,645,795 pounds of fruit. The guava is a strictly tropical fruit.

BANANAS.

This fruit was reported from Hawaii only. The islands reported 156,012 plants and 141,653 bunches of fruit.

KAKI.

Kaki, or Japanese persimmons, were reported from 7 states and territories. The number of trees and their product are given in table XXXII.

TABLE XXXII.—NUMBER OF KAKI TREES, JUNE 1, 1900, AND POUNDS OF FRUIT PRODUCED IN 1899, BY STATES AND TERRITORIES.

STATES AND TERRITORIES.	Trees.	Pounds.

California.....	2,690	59,400
Florida.....	3,271	76,110
Louisiana.....	1	.....
Texas.....	888	1,520
Washington.....	2	.....

PINEAPPLES.

This fruit was reported from Florida, California, and Hawaii. The following table gives the number of plants and of pineapples:

TABLE XXXIII.—NUMBER OF PINEAPPLE PLANTS, JUNE 1, 1900, AND QUANTITY OF FRUIT PRODUCED IN 1899, BY STATES AND TERRITORIES.

STATES AND TERRITORIES.	Plants.	Pineapples.
The United States.....	14,690,931	2,980,240
California.....	1,815	440
Florida.....	14,578,597	2,863,240
Hawaii.....	119,519	116,560

OLIVES.

The olive is the most important of the extra tropical fruits of the second class. Commercial production of olives, followed extensively by all Mediterranean nations, is confined largely, in the United States, to California, the largest orchard in the world being located at San Fernando, Los Angeles county.

Although introduced into the southern colonies as early as 1634, its cultivation did not prove successful. Trees from seeds planted in 1769 at San Diego, California, are still producing fruit, and oil was first made in the state at Santa Barbara in 1872. In 1899 six counties in the great central valley of California reported nearly 57 per cent of the state crop of 5,040,227 pounds, although they showed but 25 per cent of the trees. Los Angeles and San Diego counties reported 13 per cent of the crop and 31 per cent of the trees.

The fruit is nearly all used for pickles or in the manufacture of oil; for the former use the black mission olive is favored. The oil is used as a salad oil, in soap making, and in the process of manufacturing tobacco.

Table xxxiv gives the production of olives and the number of trees reported to the Twelfth Census.

Although figs were reported by more states than were any of the other subtropical fruits, California was the only state which produced them in commercial quantities. Twenty-nine states reported trees and 22 reported fruit in 1900.

UNCLASSIFIED TROPICAL FRUITS.

From a number of states and territories, but especially from Hawaii, many tropical fruit trees were reported, the kinds of which were not specified. The total number of unclassified trees thus reported was 3,314,131 and the quantity of fruit was 2,969,239 pounds.

Table xxxvi gives, by states and territories, the number of unclassified trees and the pounds of fruit reported.

COFFEE.

This plant is grown only in Hawaii, where its culture is quite largely in the hands of the Japanese and Chinese. Reports of coffee were received from 580 farms, having a total of 3,225,743 trees, which produced 2,297,000 pounds of coffee, valued at \$246,181.

GENERAL STATISTICS.

Table 1 presents, by states and territories, the statistics of nuts produced in 1899, and Table 7 presents detailed statistics of the same facts by counties. The total value of all cultivated nuts on farms from which reports were received was \$1,950,161, of which \$1,455,776, or 74.6 per cent, was reported from the states of the Western division. California alone reported \$1,441,137, or 73.9 per cent of the total. Of the nut trees reported by the Twelfth Census, 1,649,072, or 44.5 per cent, were almonds; 48,919, or 1.3 per cent, cocoanuts; 643,192, or 17.5 per cent, pecans; 726,798, or 19.6 per cent, Persian, or English walnuts; and 634,460, or 17.1 per cent, miscellaneous unclassified nuts.

ALMONDS.

The cultivation of this nut is largely confined to California, although a few trees have been planted in Arizona. Of the total product of the United States, 97.9 per cent was reported by California, 52.5 per cent of which were grown in the three counties of Yolo, Solano, and Contra Costa. The acreage and production of this nut in eight leading counties is shown in table XXXVII.

TABLE XXXVII.—NUMBER OF ALMOND TREES, JUNE 1, 1900, AND QUANTITY OF NUTS PRODUCED IN 1899, BY STATES AND COUNTIES.

COUNTIES.	Trees.	Pounds.
The United States.....	1,649,072	7,142,710
California.....	1,601,947	6,992,610

Other counties.....	682,800	1,738,800
Arizona.....	20,756	116,510
Maricopa.....	28,287	106,500
Other counties.....	1,469	9,950
All other states.....	17,369	33,590

COCOANUTS.

This nut is grown only in Florida and Hawaii. In Florida there were reported 48,664 trees and 136,600 nuts grown in 1899. In Hawaii, 255 trees and 8,300 nuts were reported. Part C of Table 7 shows that the nuts of Florida were grown in three counties, of which Monroe reported the largest proportion.

PECANS.

Pecan trees were reported in 1899 from 28 states, and nuts from 23 states. The total production was

3,206,850 pounds, of which 1,810,670 pounds, or 56.4 per cent, were grown in Texas; 637,470 pounds, or 19.9 per cent, in Louisiana; and 242,300 pounds, or 7.6 per cent, in Mississippi. No other state reported as much as 100,000 pounds, and only Missouri, Kentucky, Arkansas, and Alabama reported as much as 50,000 pounds. The production of pecans in commercial quantities is, therefore, confined largely to these three states, in which the farmers make a business of cultivating the nut extensively in orchards.

The following table gives the counties in the states which report more than 75,000 pounds of these nuts:

TABLE XXXVIII.—NUMBER OF PECAN TREES, JUNE 1, 1900, AND POUNDS OF NUTS PRODUCED IN 1899 IN SELECTED COUNTIES IN TEXAS, LOUISIANA, AND MISSISSIPPI.

PERSIAN, OR ENGLISH WALNUTS.

This nut is also often called the Madeira nut. A greater proportion of these nuts, than of any others, was reported as cultivated on farms. The trees reported numbered 726,798, and the product in 1899 was 10,668,065 pounds. Of that product 10,619,975 pounds, or 99.6 per cent, were grown in California. The centralization of the industry in a few counties is shown in the following table:

TABLE XXXIX.—NUMBER OF PERSIAN, OR ENGLISH WALNUT TREES, JUNE 1, 1900, AND QUANTITY OF NUTS PRODUCED IN 1899, IN SPECIFIED COUNTIES OF CALIFORNIA.

## FOREST PRODUCTS.

The total value of forest products cut or produced on farms in 1899 was \$109,989,868. This includes only the wood, lumber, railroad ties, etc., which the farmers cut in connection with their ordinary farming operations. The reports of persons making lumbering or wood cutting their principal business were not included, and for this reason, in the agricultural occupation tables in connection with this report, lumbermen and wood

choppers were excluded. Of the total value of forest products, \$25,094,285, or 22.8 per cent, was reported by the North Atlantic division; \$18,547,791, or 16.9 per cent, by the South Atlantic; \$38,844,397, or 35.4 per cent, by the North Central; \$22,611,040, or 20.6 per cent, by the South Central; and \$4,767,261, or 4.3 per cent, by the Western.
